Mr. Wheat: Then Witness Watkins' Exhibits 153, 154, 155, and 156. Most of these, I may say, were offered either [fol. 10642] by Michigan Gas Transmission, Consolidated Gas Company, or by Commission's counsel. The only one I wish to offer now is 153, which is the statement of cost of business development period April 1, 1932, to June 30, 1941.

. . . . . .

[fol. 10643] Trial Examiner: I have just compared excluded Exhibit 39 and the exhibit marked for identification as 153, and I am wondering about the competency of 153.

Mr. Littman: As I explained, your Honor, Exhibit 153 contains costs which were capitalized by the company.

. . . . . .

(The document referred to was received in evidence as Exhibit No. 153.)

Mr. Wheat: Then, Mr. Examiner, may we go to—I think [fol. 10644] Commission's counsel offered Exhibits 154, 155, and 156, which are documents furnished at his request by Mr. Watkins.

. . . . . .

(The documents referred to were received in evidence as Exhibits 154, 155, and 156.)

Mr. Wheat: I have nothing to say, of course, about 157, 158, and 159. We are not particularly interested in whether they come in or not.

Mr. Littman: No objection.

Trial Examiner: By whom were those exhibits presented: Mr. Chamberlain.—157-A and B, 157-C, 158, 159. I think all were presented by Mr. Chamberlain.

Mr. Littman: No objection.

Trial Examiner: They will be received.

(The documents referred to were received in evidence as Exhibits 157-A, B, C, 158, 159.)

. . . . . .

[fol. 10645] Trial Examiner: Mr. Culton, did you and Mr. Wheat carefully follow the motion to strike which Mr. Littman made with reference to your proposed Exhibit 75?

Mr. Culton: I am familiar with it, yes.

. . . . . .

Trial Examiner: Do you agree with Mr. Littman that that does exclude the evidence of value other than book [fol. 10646] cost, other than as recorded on the books of the company?

Mr. Culton: Frankly, Mr. Examiner, and that is what we are trying to be with you all the time, the philosophy in support of his objection to those portions of that exhibit are exactly the same as the philosophy in support of his objection to Exhibit 37 and Exhibit 37-A.

Trial Examiner: Well, of course, I am in sympathy with his view. I am simply inquiring whether the motion to strike, which I did not follow carefully, does reach that and no other parts of the exhibit in which you are interested.

Mr. Culton: I am sure that is correct.

Mr. Littman: I tried to confine my motion to strike purely to those parts that dealt with value.

Mr. Culton: That is the way I understood it.

Mr. Littman: That is your understanding, is it?

Mr. Culton: That is right.

Trial Examiner: As to Exhibit 75 for identification, being the statement of Mr. Ralph Davis, the motion to strike

which Mr. Littman has made will be sustained, and the exhibit, as so revised, will be received.

(The document referred to was received in evidence as Exhibit 75.)

Mr. Littman: Are you going to instruct the reporter to make proper marks and notations on the exhibit physically?

[fol. 10647] Trial Examiner: That may be done.

* * * * * * * * * *

Mr. Culton: Now, Mr. Examiner, may I complete the record on some points by making a tender of proof which I understand is in accordance with appropriate procedure?

Trial Examiner: Certainly.

Mr. Culton: Relating to excluded exhibits.

Trial Examiner: Before you do that, Mr. Culton, the Trial Examiner has within recent days seen an order of the Securities and Exchange Commission which is included in the release of that agency No. 3415.

Because the record is replete in this proceeding with matters of similar character, I suggest that that order be included in our record and copies obtained for the files.

Mr. Wheat: What was the number?

* * * * * * * * * *

[fol. 10648] Trial Examiner: We will have it marked as Exhibit No. 258, and I am sure there can be no valid objection to its inclusion, so I will direct that it be received in evidence as soon as copies are furnished.

* * * * * * * * * *

Trial Examiner: Proceed, Mr. Culton.

Mr. Culton: Mr. Examiner, the Respondent companies make tender of proof of those portions of Exhibit 75, being the exhibit of Mr. Ralph Davis, which have just been excluded.

We offer each of those paragraphs separately.

We next make offer of proof of Exhibits 37 and 37-A of the Witness Wallace, 37-A being an exhibit containing certain correction sheets of Exhibit 37, and that exhibit purporting to show the market value of the leaseholds as of approximately the time this investigation commenced.

We point out in that connection that those leases represent real estate, and the language "reproduction cost" technically could not apply to that exhibit since the exhibit purports to reflect the then market value of the leaseholds, and the leaseholds not being physical property for which there is technically a reproduction cost, since it [fol. 10649] would take many millions of years to reproduce that gas.

Shall I proceed with the others, Mr. Examiner?

Trial Examiner: Surely.

Mr. Cultom: In order to get these in order, we offer four exhibits, make tender of proof of four exhibits in one tender, being Exhibit 39, representing Mr. Biddison's reproduction cost new of plant property and business as of June 30, 1941, with Exhibit 39-A being correction sheets for Exhibit 39, with which we offer Exhibit 62, representing deduction from reproduction cost new for depreciation, showing present value of plant, property, and business, as of June 30, 1941, and Exhibit 70, which reflected reproduction cost new of plant property and business as of June 30, 1941.

Also separately from those four we offer Exhibit 17 prepared by Mr. Biddison showing valuation of property, plant, and equipment as of September 30, 1938.

We also, separately from the foregoing, but together, offer Exhibits 83, 84, and 86 as to the portions which were heretofore stricken, and in connection with them further offer Exhibit 97 showing a valuation based on variation of purchase price of a dollar. That was prepared by Mr. Spitznagle, those four being related documents, and all of these documents which we have offered are prepared for the purpose of tendering proof with respect to the matters reflected in those documents.

[fol. 10650] Trial Examiner: 83, 84; 86 and 97 were all presented by Mr. Spitznagle?

Mr. Culton: Mr. Haberly presented some of them, but Mr. Spitznagle's testimony was related to them.

Trial Examiner: Our practice contemplates the exceptions which were, I believe, in each instance granted when the exhibits were excluded.

You are also, of course, entitled to offer proof. Your offer of proof is denied and an exception is, of course, noted on the denial of this ruling to apply separately to your several stated offers, and the exhibits to which reference has been made will be appropriately endorsed by the Trial Examiner to be included in the exhibits filed.

In other words, an exhibit which has been excluded and is followed by an offer of proof will go into the file which merely entitles you, of course, to preserve the evidence which has been rejected by the Trial Examiner.

Mr. Culton: It is made a part of our tender, in other words?

Trial Examiner: That is true. The reporter, if he has these exhibits, will please deliver them to the desk in the morning, because each exhibit should be endorsed in accordance with this ruling.

. . . . . .

[fol. 10651] Mr. Littman: Well, I haven't heard counsel say that they rest and have no further testimony to present.

Mr. Culton: This is an investigation, Mr. Examiner. We don't know that there is any reclining to take place. We stated that that is all of the testimony which we have.

Trial Examiner: You have no desire at this time, Mr. Culton or Mr. Wheat, to adduce any further evidence of any kind or character?

Mr. Wheat: Not at this time unless further evidence comes into the record which we feel should be properly rebutted.

Trial Examiner: On the record as it stands and as regards the defense which was contemplated by the order of the Commission in this matter, you do rest, do you not?

Mr. Wheat: Well, I think we stand silent, sir, before this bar.

Trial Examiner: You have concluded the presentation you desire to make?

Mr. Wheat: At this time, yes, sir.

Trial Examiner: Yes.

* * * * * * * *

[fol. 10659] SAMUEL JOSEPH a witness, called on behalf of the Federal Power Commission, being first duly sworn, was examined and testified as follows:

Direct Examination

By Mr. Littman:

Q. Will you please state your full name and present address?

A. My name is Samuel Joseph. I live in Arlington, Virginia.

Q. Will you state your education and experience?

A. I am a graduate of the Wharton School of the University of Pennsylvania. I received the degree of Bache-
[fol. 10660] lor of Science in Economics from that University in June, 1928. I then attended the Columbia University Graduate School of Business Administration and did some work towards a Master's degree.

After leaving Columbia University I was employed in the public accounting field. I hold a certified public accountant's certificate from the State of New York. I am a graduate of Brooklyn Law School and hold the degree of Bachelor of Law. I am a member of the New York Bar.

Since 1934, I have been engaged in the public utility rate regulatory field. I have worked on state-wide investigations of telephone rates in Louisiana, Alabama and West Virginia. I have also worked on investigations of other utility companies, including electric, water and gas

utilities, I have testified before the Louisiana and Alabama Public Service Commissions and before the Public Service Commission of West Virginia.

At present and since August, 1939, I have been employed by the Federal Power Commission. I was first employed as a senior examiner of accounts and was assigned to the investigation of the Natural Gas Pipeline Company of America and Texoma Natural Gas Company as accounting examiner in charge. Last summer I was promoted to the position of principal examiner, which position I now hold.

Q. By the way, you just referred to an investigation [fol. 10661] of the Natural Gas Pipeline Company of America and Texoma Natural Gas Company. Are you referring to the investigation which recently was the subject of an opinion by the United States Supreme Court predicated upon an interim order adopted by this Commission?

A. That is the same investigation and same proceeding.

Q. Will you proceed with your statement of your education and experience?

A. I have taken part in the investigation of the following companies:

Southern Bell Telephone and Telegraph Company in the states of Louisiana and Alabama; New Orleans Public Service Company; Louisiana Power and Light Company; Louisiana Public Utilities Company; Baton Rouge Water Company; Chesapeake and Potomac Telephone Company of West Virginia; Wheeling Electric Company; Appalachian Electric Power Company; and Natural Gas Pipeline Company of America and Texoma Natural Gas Company.

Q. What is the nature of your present position with the Commission, Mr. Joseph.

A. Well, among certain other things, I am responsible for making studies and conducting research on the subject of fair rate of return for public utilities.

Q. Have you prepared an exhibit for purposes of this proceeding?

[fol. 10662] A. I have.

Q. I hand you a single sheet entitled, "Weighted Average Earnings Price Ratios on Common Stocks 153 Stable Industrial Companies", and ask whether this is the exhibit which you prepared?

A. It is.

Mr. Littman: I ask, Mr. Examiner, that this exhibit be marked for identification with the next number.

Trial Examiner: It will be marked for identification as Exhibit No. 259.

(The document referred to was marked Exhibit No. 259 for identification.)

By Mr. Littman:

Q. Will you please describe Exhibit No. 259 which you prepared?

A. This exhibit has been compiled from material contained in Mr. Coffman's Exhibit No. 254 which he summarized on Chart No. 11 of Exhibit No. 253. The material is set forth in the same manner as that shown in the table supporting Chart No. 11 of Mr. Coffman's Exhibit No. 253.

The difference between the table supporting Chart No. 11 and the exhibit which I have prepared is that Mr. Coffman's table shows "Investors' appraisal of over-all capital risk 153 stable industrial companies" whereas my exhibit shows the earnings price ratios on the common stocks [fol. 10663] of these same companies.

The period covered is the same, namely, 1937 through 1941, both inclusive.

Q. Why did you make these calculations, the results of which are set forth in Exhibit No. 259?

A. I am of the opinion that to the extent that the "153 stable industrial companies" chosen by Mr. Coffman are comparable with utilities generally or with natural gas pipe line companies that comparability relates chiefly to the common stocks, rather than to the "over-all capital".

The capital structure of the 153 stable industrial companies consists very substantially of common stocks. Utility companies, including natural gas pipe line companies, have a very much larger percentage of their capital repre-

sented by funded and long term debt and by preferred stock.

The annual cost in interest and preferred stock dividends of securities senior to the common stock of Panhandle Eastern Pipe Line Company have been fixed by the recent refinancing.

Chart No. 11 of Exhibit 253 and the material supporting that chart would be of very little, if any, assistance in an attempt to determine the proper allowance on the senior securities.

It, therefore, seems to me that if this material is usable by the Commission in finding a proper rate of return [fol. 10664] for Panhandle Eastern Pipe Line Company and its subsidiaries, then the earnings-price ratios on the common stocks are a better aid or guide than are the overall ratios calculated by Mr. Coffman.

Q. Referring to your Exhibit No. 259 for identification, will you state what the weighted average earnings-price ratio is for these 153 stable industrial companies over the five years, 1937 to 1941, both inclusive, for the common stocks of those companies?

A. The weighted average shown on this exhibit is 7.43 per cent. I want to add that the weighting follows the method used by Mr. Coffman in his Chart No. 11 of his Exhibit No. 253.

Q. You mean the weighted average earnings-price ratio is 7.43 per cent? A. Yes.

Q. And you have followed the same method of weighting as was followed by Mr. Coffman in arriving at that percentage figure?

[fol. 10665] A. That is correct.

Q. There has been considerable evidence taken in this proceeding on the subject of earnings-price ratios. Will you comment briefly on the use of earnings-price ratios on common stocks in establishing a fair rate of return?

A. After earnings-price ratios on common stocks have been calculated the mathematical result cannot be used directly without the exercise of a considerable amount of judgment.

Your illustration, Mr. Littman, made during Mr. Coffman's cross-examination of the earnings-price ratio on brewery common stocks just before prohibition is to the point. The essential requirement is to determine, as accurately as possible, what rate the investor is demanding for the future.

The earnings price ratio relates to past earnings. It is calculated by dividing past earnings by market prices. What is sought, however, relates to the future and the earnings-price ratios must be adjusted to eliminate those factors which are being discounted by the market price of securities.

Q. Will you please give us an illustration of your last statement?

A. Yes. Assume a company's common stock is selling at $30 per share. Assume that earnings during the last [fol. 10666] reported years were $3.60. The earnings price ratio on this stock is 12 per cent.

Now, if the investor in this security thinks that prospective increases in taxes, or expenses, or the possibility of reduction in rates is such as to probably reduce future earnings to $2.70 then it seems clear that his true earnings requirement is 9 per cent; that is, $2.70 divided by $30, rather than the 12 per cent shown on the historical basis.

This discounting feature cannot be measured exactly, but an estimate of what has been discounted is nevertheless important.

. . . . . .

By Mr. Goodman:

Q. In plain language, Mr. Joseph, your last sentence means that the current profit realized in, say, the present year, cannot be taken as any measure of the future realization which the investor expects. That is an unknown, is that right?

A. You usually work from current earnings—

Q. (Interposing) Yes.

A. (Continuing) toward an estimate of what the investor actually requires for the future.

Q. I see.

[fol. 10667] A. In times like these, he probably has in mind that the earnings of the past will be reduced by prospective events such as increases in taxes.

Q. In other words, one cannot probe what is in the investor's mind merely by looking at the profit of the current accounting period. That is what you mean, isn't it, Mr. Joseph?

A. Well, the use of the unadjusted earnings-price ratio would not show what is in the investor's mind. Sometimes a very high earnings-price ratio would be a clearer indication that he expects a smaller profit, expects certain things to happen which will reduce that profit rather than that he expects a continuation of high earnings levels.

Q. Now, the matter can work conversely too, can't it?

A. At times it may.

Q. In other words, the current profit may be very small but the price at which the stock sells may be very high, indicating the prospective higher future earnings?

A. Situations like that have occurred, particularly before 1929.

Q. Well now, another thing, Mr. Joseph, logically, a long record of regular level profit yield is fairly generally accepted when conditions are normal and the outlook is normal as indicating the probable yield of the future.

Now, do you find anything in this particular evidence [fol. 10668] about which you testified that is consistent or inconsistent with that? In other words, do you have before you—

[fol. 10669] Mr. Littman: Mr. Joseph, let me ask you this, do you understand the question?

The Witness: I think the question has two parts.

Mr. Littman: Suppose you answer the question, part by part in your own way. Perhaps that would be the best way.

The Witness: The first part of it, a stable level of earnings, would indicate in normal times that it was an indication of that level of earnings. That would probably be true if there is nothing to make the investor believe that

these stable earnings would change one way or the other and I assume that is what Mr. Goodman means by saying that the normal times will continue. In effect, he is saying if there is no reason why earnings shall change, then they will probably remain the same. I think there cannot be any quarrel with that.

Now, the second part of your question relating to testimony that has gone in here, I did not quite follow.

By Mr. Goodman:

Q. Do you find any testimony here that is calculated to set forth some continued past stable earnings under con-
[fol. 10670] ditions that permit you to be able to say that such earnings will continue?

A. Well, if I understand your question, I think the testimony is quite to the contrary.

Q. That is right. In other words, really you criticize the conclusion or disagree with the conclusion because of the lack of any showing to the probable effect that the earnings are stable earnings.

Mr. Wheat: Are you referring to these 153 stable industrial companies?

Mr. Goodman: Not at all.

Mr. Wheat: That is what the witness testified on, I thought.

Mr. Goodman: Now, you see you have injected something in there that simply confuses the subject and takes everybody off the track.

Mr. Wheat: I have not confused anybody's trend of thought and you know it.

Mr. Littman: Is there a pending question?

(Whereupon, the pending question was read by the reporter.)

Trial Examiner: Do you care to make some comment on that statement?

The Witness: I think both as respects the 153 industrial companies and as to the testimony on earnings-price ratios for utilities and for natural gas pipe line companies,

[fol. 10671] the market unquestionably is discounting future events.

By Mr. Goodman:

Q. Does it appear to you from the action of the market in that respect and from your general knowledge of the factors involved that the investor is assuming that current yields will or are representative of future yields?

Mr. Littman: By "yields", you mean earnings-price ratios?

Mr. Goodman: No, earnings-price ratios, that is something you figured.

. . . . . .

The Witness: I think that the earnings-price ratios of these 153 stable industrial companies and the earnings-price ratios of utilities and natural gas companies submitted by Mr. Coffman are somewhat higher than the investor actually expects will be achieved in the near future.

Mr. Goodman: That answers.

. . . . . .

[fol. 10672] Cross-Examination.

By Mr. Wheat:

Q. Mr. Joseph, do you have before you Exhibit No. 153?

A. I have a copy here, yes, sir.

Q. And I wonder if you would turn to table supporting Chart No. 11? That table shows certain summary data, does it not, in connection with the study made by Mr. Coffman of these 153 stable industrial companies?

A. It summarizes the material submitted by Mr. Coffman in Exhibit No. 254.

Q. That is what I asked you. It does that, does it?

[fol. 10673] A. Yes, it does.

Q. And your Exhibit No. 259 has been made up in tabular form consistent with the table supporting Chart No. 11, so that we, if we wish to contrast the indicated market value of capital with what you have termed "indicated market value of common stock", we can ascertain the data

back and forth from the table supporting Chart No. 11 in Exhibit No. 253 and your Exhibit No. 259, can we not?

A. It is consistent in form, Mr. Wheat.

Q. That is what I asked.

A. It is not quite so consistent in theory.

Q. I have not asked you a thing about theory, have I?

Mr. Littman: Just a minute.

Mr. Wheat: I asked whether we could contrast, if we wanted to contrast these figures, Exhibit No. 259 with the table supporting Chart No. 11. That is similar in form to that of Exhibit No. 259, that is correct, is it not?

The Witness: Exhibit No. 259 is similar in form to table supporting Chart No. 11 in Exhibit No. 253, yes, sir.

By Mr. Wheat:

Q. Now, will you tell us what percentage the indicated market value of common stock for the year 1941 shown on your Exhibit No. 259, what percentage that figure bears to the indicated market value of capital for [fol. 10674] the year 1941 shown on Mr. Coffman's table supporting Chart No. 11 of Exhibit No. 253?

A. For the year 1941, the indicated market value of common stock is approximately 86 per cent of the indicated over all market value.

Q. What was the similar percentage for the year 1940?

A. About 86.6 per cent.

Q. And for the year 1939? A. 87.1 per cent.

Q. And for the year 1938? A. 87 per cent.

Q. And for the year 1937? A. About 89.6 per cent.

Q. Now, will you tell us the percentage which the earnings available for common stock shown in the second and third columns on your Exhibit No. 259 bore in 1941 to the earnings available for capital shown in a similar position on Mr. Coffman's table supporting Chart No. 11 in Exhibit No. 253?

. . . . . .

Mr. Wheat: You understand, Mr. Joseph, that what I want to contrast is your figure of $1,087,691 representing what you term "Earnings available for common stock" for

the year 1941 and Mr. Coffman's figure for the same year of $1,166,698 which he has under the caption, "Earnings [fol. 10675] available for capital". I would just like to have you tell us the percentage which the one bears to the other.

The Witness: I have not calculated those.

By Mr. Wheat:

Q. Would you mind doing that for us? It is a simple matter and I would like to have you do it for each of those five years, please.

Mr. Littman: For how many years are you going to want that?

Mr. Wheat: I said five years. There are five figures there, that is all. It is a simple mathematical calculation, isn't it?

The Witness: Rather simple. I would like to use a calculating machine to do the figuring, if I can.

Mr. Wheat: I have got some approximate figures if you wish me to give them to you.

Mr. Littman: Let's have your figures subject to check, Mr. Wheat. Perhaps it will save time.

By Mr. Wheat:

Q. For the year 1941, 93 per cent. That is the ratio of earnings available for common stock as stated by Mr. Joseph and earnings available for capital as stated by Mr. Coffman. Does that sound reasonable to you?

A. Yes, it does.

[fol. 10676] Q. And for 1940—93 per cent; for 1939—92 per cent; for 1938—90 per cent, and, for 1937—94 per cent.

Do those figures seem reasonable to you? Of course, they are subject to your check.

A. Yes, they appear to be reasonable.

The first figure I gave you, Mr. Wheat, when you asked about the relation of the indicated market value of common stock for 1941 related to the indicated market value of capital shown in Mr. Coffman's exhibit, I said was 86 per cent.

Q. I think that is correct.

A. I have it here 86.2 per cent. I gave you the place behind the decimal for the other figures and I give it to you on this figure.

. . . . . .

Mr. Littman: I have one or two matters that might well be disposed of at this time.

At page 4384 of the transcript, I requested Dr. Bartle to supply certain information with respect to the production in the Hugoton Field by the two largest producers in that field, to wit, by Panhandle Eastern Pipe Line Com- [fol. 10677] pany and Northern Natural Gas Company. He responded quite promptly to my request. However, I just did not get around to reporting his prompt reply to my request until today.

Now, his response is on a single sheet and contains data which may very well be copied into the record at this point. The substance of Mr. Bartle's response is that, for the year ended July 1, 1941, Panhandle Eastern produced 40.7 per cent of the total production from the Hugoton Field and Northern Natural produced 49.1 per cent, a total in percentage of the two companies of 89.8 per cent of the total production from the field. That would leave approximately 10 per cent produced by others.

For the year ended July 1, 1940, the comparable percentages are for Panhandle Eastern, 41 per cent and Northern Natural, 44.7 per cent, a combined percentage of 85.7 per cent.

For the year ended July 1, 1939, the percentage was, for Panhandle Eastern, 40.4 per cent and for Northern Natural 46.5 per cent, a combined percentage of 86.9 per cent.

This sheet contains the M.c.f. figures and appropriate titles and I am going to ask that the data be copied into the record as given to me by Mr. Bartle.

Trial Examiner: This statement of Dr. Bartle's, I assume, has been submitted to counsel for the company? [fol. 10678] Mr. Culton: We delivered it to counsel for the Commission, Mr. Examiner. We have no objection to it.

Trial Examiner: The reporter will copy this statement into the record as requested.

[10679]

Production from the Hugoton Field

Total metered production from Hugoton Field (Kansas and Oklahoma)	37,905,071 M. C. F.	36,896,130 M. C. F.	32,017,511 M. C. F.
Production which went into Panhandle Eastern Main Line system	15,442,651 M. C. F.	15,133,288 M. C. F.	12,960,792 M. C. F.
Production which went into Northern Natural Gas Company Main Line system	18,625,482 M. C. F.	16,497,542 M. C. F.	14,892,785 M. C. F.
Panhandle Percentage	40.7 %	41.0 %	40.4 %
Northern Natural Percentage	49.1 %	44.7 %	46.5 %
Combined Percentage	89.8 %	85.7 %	86.9 %

[fol. 19680] Mr. Littman: At pages 5931 to 5933 of the transcript for January 19, 1942, I requested Mr. Hinton to furnish certain information with respect to the status of his estimated proposed 1942 construction program and also for subsequent years which estimates are set forth from pages 27, et seq., of his Exhibit No. 42.

Now, Mr. Hinton has responded promptly to this request, I having received the response within a matter of a week or ten days after my request, and I do not want to charge Mr. Hinton with the delay. I simply did not get around to having these sheets marked for identification until today. It is my fault, not Mr. Hinton's.

I would, therefore, like to have marked for identification Mr. Hinton's response to that request, a document consisting of three pages, entitled, "Panhandle Eastern Pipe Line Company Status of Proposed 1942 Construction Program—Production and Gathering System South and West of Liberal Station (Pages 27 and 28 of Exhibit 42)".

. . . . . .

(The document referred to was marked Exhibit No. 260 for identification.)

Mr. Wheat: I take it, Mr. Littman, that you understand, as I do, that this Exhibit No. 260 for identification refers to the status of this construction program as of the date [fol. 19681] on which you asked your question or approximately that date?

Mr. Littman: Yes.

I would like to ask Mr. Culton whether I am correct in understanding that the reason no details of the status of the 1943 construction program and for the years subsequent thereto were not presented by Mr. Hinton in Exhibit No. 260 was simply because there is no status? In other words, that construction has not reached any stage of presentation to the Board of Directors?

Mr. Culton: My understanding is that there is no occasion to do those things that are scheduled for 1943 before 1943 comes around unless it is by reason of a change of plan which might result from the circumstances that Mr. Hinton and Mr. Creveling referred to and, obviously, there

would be no necessity to show any status as to the wells which are to be drilled in 1943. If you will look at the items mentioned for 1943, I think you will readily recognize that there could be at this time no status for those particular items.

Mr. Littman: Yes, I assumed as much but I wanted to make certain my understanding was correct.

I offer in evidence Exhibits Nos. 259 and 260.

* * * * * * * * * * *

[fol. 10682] (Exhibits Nos. 259 and 260 were received in evidence.)

* * * * * * * * * * *

[fol. 10698] Mr. Littman: Mr. Examiner, before asking Mr. Shattuck of our staff to take the stand, I would like to have two exhibits marked for identification.

The first document was supplied to us at our request by Mr. O. W. Merton of Panhandle Eastern Pipe Line Company. His letter of transmittal reads as follows, under date of April 9, 1942:

"Federal Power Commission
"Washington, D. C.

"Attention: Mr. Littman

"Gentlemen:

"Upon the occasion of your last visit to Kansas City, you requested certain data relative to coincidental and non-coincidental maximum days. You, no doubt, recall that the request originated out of a telegram from Mr. Zinder and that we discussed the request at some length with Mr. Shattuck.

"The attached data has been prepared in response to that request and in accordance with our conversation with Mr. Shattuck. It consists of one tabulation comprising four sheets entitled 'Approximate Coincidental Maximum Day Sales' and a single sheet entitled 'Direct Industrial Sales'. Two copies are enclosed.

[fol. 10699] "Please advise if further data or explanation is required.

"Sincerely

"(Signed) O. W. Morton"

I ask that the document referred to by Mr. Morton be marked for identification with the next exhibit number.

(The document referred to was marked Exhibit No. 261 for identification.)

Mr. Littman: I next wish to read into the record a letter dated April 11 from Mr. O. W. Morton regarding this same subject matter.

[fol. 10700] "Federal Power Commission
"Washington, D. C.

"Attention: Mr. Harry S. Littman

"Gentlemen:

"Supplementing our report of Maximum Day Sales sent to you under date of April 9, 1942, we enclose herewith a report which we prepared in January showing the quantity of gas curtailed during the period January 4 to 12, on the Panhandle Eastern main line system.

"You will note that total curtailments on the maximum day, January 7, were 20,210 MCF and that subsequently the amount curtailed increased daily until it rose to a maximum of 25,022 MCF on Saturday, January 10.

"We do not have the record of curtailments of Michigan Gas Transmission Corporation but are advised that there was no curtailment on the 7th of January and that curtailment of industrial customers started on January 8th and increased for several days thereafter to an amount roughly estimated at ten million cubic feet daily.

"Yours very truly

"(Signed) O. W. Morton"

I ask that the data referred to in Mr. Morton's letter of April 11, 1942, which consists of one page of tabulations be marked for identification as Exhibit No. 262.

Trial Examiner: It will be so identified.

[fol. 10701] (Exhibits Nos. 261 and 262 were received in evidence.)

* * * * * * * *

J. G. Shattuck, a witness, called on behalf of Federal Power Commission, being first duly sworn, was examined and testified as follows:

Direct Examination.

By Mr. Littman:

Q. Will you state your full name and address, please?

A. J. G. Shattuck, Washington, D. C.

Q. By whom are you employed, Mr. Shattuck?

A. By the Federal Power Commission.

Q. What is your present capacity with the Commission?

A. I am an engineer with the Bureau of Accounts, Finance and Rates.

Q. And how long have you been so employed?

A. I have been employed by the Bureau of Accounts, Finance and Rates for about 3½ years, first as an asso-

[fol. 10702] ciate engineer and then later as an engineer.

Q. Will you briefly state your education and experience, Mr. Shattuck?

A. I received my engineering education at Leland Stanford, Jr., University. I received an A. B. degree in Civil Engineering in 1928. I spent the following year in graduate study in the same university.

During my attendance at the University, I worked in its Corporation and Stores Department which handled all maintenance and new construction work for the University and for the residences situated near the University. This work included the development of additional residential sites, the construction of residences, the construction of new buildings and the extension of water, electricity and gas facilities to them. During this same period, I also

assisted engineers in the design and installation of street and utility construction for residential developments.

After leaving the University, I took charge of the engineering of a large community development near San Francisco, which work included design and construction of roads, water supply and small dams to provide recreational lakes. At the same time, I acted as consulting engineer and, in many cases, had direct charge of similar projects located near San Francisco.

In October, 1929, I became Assistant Engineer with the [fol. 10703] Department of Public Works of the City of Palo Alto. In this position, I handled the sewerage and water supply problems of the city, together with occasional work upon street improvements and the water, gas and electric utilities. Cost analysis and cost accounting and the study of operating costs with the end of reducing unit costs were an important part of my work.

In October, 1932, I became Gas Engineer for the City of Palo Alto, having charge of the receipt and distribution of natural gas in that city. I made a study and developed a method of reducing the amount of gas lost in operating this distribution system. I also made a study of the cost of production and transmission by the company which sold the city gas at wholesale.

Trial Examiner: Is that a municipal plant?

The Witness: That is a municipal plant, sir.

In connection with that work, I also studied the operations and costs of other California gas companies. While with the City of Palo Alto, I assisted in the design and had charge of the construction of an auxiliary gas plant. During my services with the city, major pipe line changes were necessary due to rerouting of the gas and existing inadequacy of capacity. These changes, additions and improvements were practically completed before I left the employ of the city in June, 1938. In addition to the specific work of Gas Engineer for the city, I also designed [fol. 10704] the methods and supervised the taking of an inventory of the gas plant and system and the electric system and supervised the preparation of plant system maps and records. My work for the city included studies

of the retail electric and gas rates and the design of new rates for each rate reduction given to the customers periodically.

In July, 1938, I became Field Engineer for California, Area 9, of the Works Progress Administration. In that capacity, I had direct charge of receiving and examining all proposals made in that area for construction projects. In addition, I had direct charge of all work being done in the area on construction projects, which entailed the planning of the programs, procedures and alterations in such specifications as necessary to continue the work of each project.

From graduation from the University until January, 1939, I also acted as consultant either separately or together with other engineers on numerous problems covering practically all phases of civil engineering, except large structural design, and on utility matters.

In January, 1939, I accepted an appointment as Associate Engineer with the Federal Power Commission and was assigned to the Bureau of Finance, Accounts and Rates. In this capacity, my work consisted of the study of rates, contracts, investigations and reports on new rates and rate changes filed by natural gas companies and electric public utilities. In November, 1941, I [fol. 10705] was given the position of Engineer with the same Bureau. In connection with my work for the Commission, I have assisted in the investigation of natural gas companies of which the principal ones are the Hope Natural Gas Company, the Peoples Natural Gas Company and the Panhandle Eastern Pipe Line Company and its subsidiaries.

By Mr. Littman:

Q. Mr. Shattuck, have you prepared an exhibit for presentation in this proceeding dealing with the subject of allocation of adjusted 1941 costs as between what has been characterized as "regulated and non-regulated sales"?

A. I have.

Q. I hand you an exhibit entitled "Panhandle Eastern Pipe Line Company and Subsidiaries — Allocation of Adjusted 1941 Costs between Regulated and Non-regulated Sales", and ask whether this is the exhibit to which you have just referred? A. It is.

(The document referred to was marked Exhibit No. 263 for identification.)

[fol. 10706] Q. Is my understanding correct, Mr. Shattuck, that page 1 of Exhibit No. 263 for identification contains a summary of your study with respect to allocation?

A. It does.

Q. Will you please briefly explain this exhibit?

A. In this study, I have taken the costs of service, which have been previously testified to in this case, which are summarized in Exhibit No. 195 presented by Witness Watkins, and have allocated those costs to two divisions or [fol. 10707] types of costs, those proportional to maximum day sales and those proportional to annual sales.

I have taken the result of that division of costs and the proportions of the so-called regulated sales and non-regulated sales as they were set forth and defined in Exhibit No. 251 and determined the portion of each of the costs, those proportional to maximum day sales and those proportional to annual sales which are appropriately allocated to regulated sales and the portions which are properly allocated to non-regulated sales.

Q. Will you explain what you mean by the terms "regulated sales" and "non-regulated sales"?

A. I have taken the division of the sales as shown in Exhibit No. 251 and have used the same words to designate each group as used by Mr. Spaeth. I understand the term "non-regulated sales" to refer to the direct industrial sales made from the Panhandle Eastern Pipe Line system and from the Illinois Natural Gas Company system and no others. I understand the "regulated sales" as defined to include all other sales made by Panhandle Eastern and its subsidiaries.

Q. And the last class of sales are sales for resale?

A. Yes—excuse me, not all of them are sales for resale. There are some sales to residential, commercial and rural customers included in that.

Q. I see, but these are of rather minor importance, are [fol. 10708] they not? A. They are very small.

Q. Will you please proceed with your explanation of Exhibit No. 263?

A. I think it will be more direct to begin on page 2 and follow the detail through and then go to the conclusion on page 1.

Q. Very well. You may explain Exhibit No. 263 in the fashion you deem will best expedite matters.

A. The identifications shown on pages 2 and 3 on the left-hand side are those used by the company in its exhibits presented by Mr. Watkins, Mr. Spacek and others in so far as I could use them so that the accounts may be followed from their exhibits to this directly.

The 1941 costs on page 2 in Column (A) and on page 3 in Column (A) down as far as line 5, are those expenses which are shown in Exhibit No. 203. The items in line 7, page 3, to line 14, page 3, Column (A), are taken, in the most part from and do conform exactly with similar items in Exhibit No. 195.

The total of taxes, as shown in Column (A), is the same as the total of taxes in Exhibit No. 195.

Q. Exhibit No. 195 was one of Mr. Watkins' exhibits, was it not?

A. It is Mr. Watkins' exhibit entitled "Pro Forma [fol. 10709] Consolidated Income Account for the Year Ended December 31, 1941".

Q. Will you proceed with your explanation of Exhibit No. 263?

A. The utility revenues which are stated in lines 32 and 33 of page 3 and credited against the 1941 costs are those shown in the right-hand column of Exhibit No. 195 as gasoline sales and miscellaneous sales.

In Column (B) of pages 2 and 3, I have entered certain adjustments.

Q. Will you explain the character of those adjustments, Mr. Shattuck?

A. In lines 12 and 13 with the total on line 14.

On page 2, Col. B, are the items of expense which apply to the transmission operating expenses as testified to by Mr. Watkins and shown in Exhibit No. 248 which are the increase in operation expenses resulting from the inclusion of certain authorized costs not fully included in the expense for the year 1941.

Q. I take it you have just read from the title of that exhibit, have you not?

A. I read from Note 1, page 3 of that exhibit.

Q. Very well. Does that complete your explanation of the transmission expense adjustments in Column (B), [fol. 10710] page 2?

A. No. In line 38, item $94,000 is the balance of the increased costs which total, in Exhibit No. 248, $389,000, and is also the result of the increased expenses not fully included in 1941 expenses.

On page 3, line 12, in Column (B), "Adjustment", is a deduction of the amortization charged for certain sales and purchase contracts. This deduction is made in accordance with the testimony of Mr. Dunn.

Q. Are you referring, Mr. Shattuck, to the deduction of the amount of $230,173.96 of annual expense shown in line No. 12? A. Yes, sir.

Q. Very well. Proceed with your explanation of page 3.

A. In line 13, Column (B), there is a deduction of $62,854.64, which is the amount of the amortization for other sales and purchase contracts as testified to be proper to be deducted from the 1941 costs by Mr. Dunn.

The total of those two adjustments to amortization of sales and purchase contracts amounts to $293,028.60.

Q. Are you referring to Mr. Dunn's testimony to the effect that this sum of $293,000-odd is being annually charged for the purpose of amortizing what Mr. Dunn has characterized as a "write-up"? A. Yes, sir.

[fol. 10711] In line 26, Column (B), and line 27, Column (B), are items making a total net deduction of $182,000 from Federal income and excess profits taxes. This amount is the result of taking the $100,000 adjustment shown in the line for total operating revenue deductions of Exhibit No. 195 as testified to by Mr. Watkins and the adjustment in line 18 of Exhibit No. 248 testified to by Mr. Watkins of $282,000, making a net deduction of $182,000.

The effect of these adjustments is to make the 1941 costs those costs which Mr. Watkins testified to in Exhibit No. 195 in the column entitled "Consolidated" with the ex-

ception of the deduction made in accordance with Mr. Dunn's testimony.

That finishes my discussion of adjustments.

Q. Now, what amount does that leave as the total expenses to be allocated after the adjustments which you have described? A. $10,443,338.53.

Q. Very well. Now, will you proceed with your explanation of how those expenses, after adjustment, are allocated in your Exhibit No. 263?

A. The total which I just read and the items which make up that total are shown in Column (C).

Q. On what page?

A. On pages 2 and 3. The amounts shown in Column (C) have been allocated in three groups: those costs which [fol. 10712] are considered to be proportional to maximum day sales shown in Column (D), those costs which are considered to be proportional to annual sales in Column (E) and certain other costs shown in Column (F). These other costs are the costs incurred by the Indiana Gas Distribution Corporation with the exception of a very small item of gas purchase expense and a credit to production expenses.

The costs placed wholly in the maximum day's sales column, Column (D), are transmission mains expense, line 12—$350,833.19; pumping station structures, maintenance expenses, line 17—$23,897.91.

Q. That is on page 2, is it?

A. Yes, sir.

Mains, maintenance expenses, line 18—$94,212.01.

Certain other expenses have had a portion allocated to maximum day's sales, Column (D). These are operation supervision and engineering; maintenance supervision and engineering; and, administrative and general expenses. The proportion of those three accounts which have been placed in the maximum day's sales column have been arrived at in accordance with the proportion of the supervised expenses under such supervision and engineering. For example, the supervision and engineering in line 11 of $134,205.46 has been prorated to the two columns, maximum day's sales and annual sales, in accordance with a

[fol. 10713] proportion of $350,833.19 to the item $1,319,812.99. Similarly, the supervision and engineering of $48,127.64 has been apportioned at the ratio of the sum of the items, $23,897.91 and $94,212.01 to the amount of $172,819.71.

The administrative and general expenses shown in line 38 of $941,847.69 have been divided between maximum day's sales column and annual sales column in proportion to all of the expenses which appear above that line on page 2.

Turning to page 3, the item, "Miscellaneous revenue deductions" shown in line 3 of $11,499.33 has been placed in Column (E) under "Annual sales".

I would like to call your attention to the fact that in line 33, the revenues comparable to those costs—I would like to correct my testimony. I misread.

Back in line 3, miscellaneous revenue deductions, the amount of $11,449.33 has been put in the column "Annual Sales" except for $462.39 which was incurred by the Indiana Gas Distribution Corporation. Similarly, in line 33 of the same page, the miscellaneous revenues comparable with those costs have been similarly placed. The total amount of $12,309.69 is divided between the "Annual Sales" column—$11,645.35, and the "Other" column which is the revenue received by the Indiana Gas Distribution Corporation of $663.74.

The division of depreciation, depletion and amortization [fol. 10714] expenses or charges has been broken down into separate parts so far as possible from the financial statements of the company and from the exhibits in the record. The depletion of the producing leaseholds was considered as proportional to annual sales. The amortization of non-producing leaseholds was considered as proportional to annual sales. The depreciation of gasoline plant has been considered as proportional to annual sales and the amortization of the portion of the sales and purchase contracts not eliminated, in accordance with Mr. Dunn's testimony, has also been placed in annual sales.

The remainder of that item is the depreciation of gas plant shown in line 10 of $2,242,521. From that has been

deducted $3,740.80 which is the depreciation shown for the property of the Indiana Gas Distribution Corporation and that amount was placed in Column (F). The remainder of depreciation of gas plant was proportioned between maximum day's sales and annual sales column in accordance with the proportion arrived at in this fashion.

From the total classified gas plant account of $78,216,584, there has been deducted as not properly a part of the depreciable property, the intangible plant, distribution plant, deducted because the depreciation on the Indiana corporation has been taken from the amount--

Q. (Interposing) And that is shown as included in [fol. 10715] Column (E), isn't it?

A. That is right, an item of approximately $20,000 undistributed fixed capital.

The item of leaseholds amounting to about $1,750,000 since the depletion and amortization of those leaseholds has been provided for elsewhere and the gasoline plant for the same reason.

That leaves an estimated depreciable property base of $75,308,521. To obtain a ratio between the maximum day's sales and the annual sales, I have further divided that estimated depreciable property amount by taking the amounts in the accounts for land rights, mains, pumping station structures, pumping station equipment and a portion of general plant as representing the proportion of depreciation to be included in maximum day's sales and the amount of plant in production less leaseholds and gasoline plant, transmission land, metering and regulating structures, other transmission structures, metering and regulating equipment, other transmission equipment and the remaining portion of general plant as representing the proportion of depreciation to be included in the annual sales Column (E). Those factors are for maximum day's sales column, 0.93549 and, for annual sales column, 0.06451.

The division of taxes has been done separately by character of taxes in so far as possible. Gross production [fol. 10716] and sales taxes have been allocated to the cost apportioned to annual sales. Ad valorem taxes have been divided by the same factors used in dividing depre-

ciation. Franchise taxes have been assigned to those costs proportional to annual sales. Capital stock taxes and income taxes, excess profits taxes and charges in lieu of income and excess profits taxes have been divided between maximum day's sales and annual sales, half and half.

Gasoline sales, as a credit against costs, have been placed in the annual sales Column (E). I would like to point out, in that connection, that all the operating expenses of the gasoline plant, all the depreciation, in fact all costs of the gasoline plant have also been placed in the annual sales column.

I have already described the disposal of the miscellaneous revenue item in line 33. The result of this allocation is to arrive at a total of $5,222,002.87 of costs proportional to maximum day's sales, a total of $5,177,647.77 of costs proportional to annual sales and an amount of $43,687.89 of other costs not assigned to either.

Q. Now, does that complete your detailed explanation of the detail of pages 2 and 3 of Exhibit No. 263?

A. I believe so.

Q. I think perhaps it might be well for you to dwell for a moment on page 1 of Exhibit No. 263 and briefly explain [fol. 10317] the figures shown there, if you will, Mr. Shattuck?

A. In Column A, lines 3 to 7, I have transferred the totals that I have just read of approximately $5,200,000 of costs proportional to maximum day's sales and $5,200,000 of costs proportional to annual sales, to assign a portion of the item, $5,222,003 to the so-called regulated sales and the so-called non-regulated sales. I have taken a proportion arrived at by comparing the peak day use on January 7, 1943 of the two characters of service. On that date, Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company, as described in Exhibit No. 261, sold and delivered from its system west of Dana 75,293,000 cubic feet of gas of which 6,748,000 cubic feet were delivered to the so-called non-regulated sales and 68,545,000 cubic feet to the so-called regulated sales.

In Exhibit 79-A, Witness Young, it is shown that east of Dana from the system of the Michigan Gas Transmission Corporation, that the total delivery on that date was

175,435,000 cubic feet, all of which was delivered to regulated sales. The total of these amounts show that the total sales from the combined system of Panhandle Eastern and its subsidiaries was 250,728,000 cubic feet on that day of which 6,748,000 were delivered to non-regulated sales and 243,980,000 to regulated sales. The fractions representing this proportion are, regulated sales—0.9731; and, non-regulated sales—0.0269.

[fol. 10718] Using these factors directly on the amount of $5,222,003, I have found an amount of $5,081,531 of costs proportional to maximum day's sales allocated to regulated sales and an amount of $140,472 allocated to non-regulated sales.

Q. That is shown in line 3 of page 1 of Exhibit No. 263, is it not? A. Yes, sir.

In line 4 of page 1 is shown the division of the costs proportional to annual sales. These costs have been divided in accordance with the division of sales shown in Exhibit 251 in line 10 and are represented by the fractions 0.8680 to regulated sales and 0.1320 to non-regulated sales. Applying these factors to the costs proportional to annual sales, I arrived at an amount of $4,494,198 allocated to regulated sales and $683,450 allocated to non-regulated sales.

Q. What are the totals of the costs shown in this exhibit allocated as between the regulated and the non-regulated sales?

A. The costs which are allocated between regulated sales and non-regulated sales are, in total, $10,399,651 and they are divided $9,575,729 to regulated sales and $823,922 to non-regulated sales.

Q. Now, to summarize, is my understanding correct, Mr. Shattuck, what you have done here is to start with the [fol. 10719] costs shown in certain of the company's exhibits and then make certain adjustments and then go on from there and allocate to the final figures which you have just read. Is that generally a correct summary of what you have done?

A. Yes, sir.

Q. And, of course, as the Commission may change the starting figures, the allocated figures would, of course, vary, accordingly?

A. Yes, sir.

Q. Now, nowhere, as yet, have you mentioned the subject of return. I take it you have not included in Exhibit No. 263 any allocation of return?

A. I have not included in the costs shown in this study any amount for return. I would have done so had I known the amount to have included, as I consider that one of the costs of service.

Q. Now, will you give us your best judgment as to the method properly, in your opinion, to be used for the allocation of return without reference to dollars because, as I understand it, we have no definite figure in the evidence, that is to say, we, as yet, do not know what the Commission will decide is the fair amount of return?

A. If I had had the amount of the return, I would have added another line, in fact two lines, to page 3 and I would have divided the amount of the return half and half be-

[fol. 10720] tween maximum day's sales, Column (D), and annual sales, Column (E), and I would have added that to line 36 to have arrived at a total cost.

Q. Then you would have taken the totals thus secured and divided them as shown on page 1 of Exhibit No. 263?

A. Yes, I would have used those new totals instead of the totals shown in lines 3 to 7, in Column (A), and would have proceeded in the same fashion from that point on.

Q. Have you completed your explanation of Exhibit No. 263, Mr. Examiner?

A. I believe so.

Mr. Littman: We have endeavored, if your Honor please, to make a full and complete explanation of this exhibit on direct examination. I hope we have succeeded in making the exhibit clear.

[fol. 10721] Mr. Littman: We offer in evidence Exhibit No. 263.

(Exhibit No. 263 was received in evidence.)

Mr. Littman, Mr. Examiner, I have threatened from time to time on the record to ask, with consent of counsel, to have incorporated in this record, by reference, all of the rate schedules of Illinois Natural Gas Company, Michigan Gas Transmission Corperation and Panhandle Eastern Pipe Line Company. I have found that there are a great many of such rate schedules on file with the Commission. Obviously, these rate schedules set forth the very rates that are in issue in this proceeding and, to my mind, those rates should be made a part of this record.

In order to facilitate the matter of incorporating into [fol. 10722] the record, by reference, these rate schedules, I have had prepared an index of each and every one of the rate schedules that was on file with the Commission as of February 1, 1942, so that ready identification is available from this list.

Perhaps it would be best to have the list, or the index of these rate schedules, marked for identification as an exhibit so that the detailed rate schedules may be readily identified as the ones which are incorporated in the record by reference but, before doing that, I would like to now formally request Your Honor to incorporate, by reference in the record, all of the rate schedules on file with this Commission as of February 1, 1942, of the three respondents, to-wit, Illinois Natural Gas Company, Michigan Gas Transmission Corporation and Panhandle Eastern Pipe Line Company, a list of which is contained in the schedule which I have in my hand and will ask to have identified as an exhibit, if you will permit the incorporation by reference.

Trial Examiner: This index will be marked for identification Exhibit No. 264.

(The document referred to was marked Exhibit No. 264 for identification.)

[fol. 10726] (Exhibit No. 264 was received in evidence.)

(The rate schedules listed in Exhibit No. 264 are received in the record, by reference.)

Mr. Littman: Mr. Examiner, I would also like to
incorporated into the record by reference certain
schedules which have been transmitted by Panhandle E
ern Pipe Line Company and Michigan Gas Transmis
Corporation to which numerous reference has been m
in this record.

[fol. 10727] These are the schedules which have not
come, as yet, effective.

Mr. Watkins referred to them on a number of occasi
There is some question at this moment as to the pre
status of these schedules. No formal action, as I un
stand it, has yet been taken with respect to them.

You understand the ones to which I am referring,
Culton, are the ones to which you just referred a mom
ago. Is that right?

Mr. Littman: I think, in order to have a complete r
ord, we ought to have these incorporated.

Now, if Your Honor sees fit to have these incorpora
by reference, I will prepare a list similar to the list wh
has been identified as Exhibit No. 264 and present it
your Honor as Exhibit No. 264-A within the next few da
I would like to reserve an exhibit number for these pa
ticular schedules. I think, in view of the testimony h
in evidence with respect to these proposed rate schedu
and with respect to the effect that these rate schedules m
have upon those which are now on file as shown in Exhi
No. 264, that, in order to make a complete record, the
ought to be incorporated.

I might say to Your Honor that if this case were, pe
chance, to go to an appellant court in the future then, I u
[fol. 10728] derstand counsel can agree as to what portio
of the record may be required to be printed and tran
mitted to the appellant court and it seems to me that
these documents are bulky and are too numerous to
transmitted and if there is no particular necessity at th
time, I am sure counsel will have little difficulty agreei
on what parts are necessary for printing and what par
are not. In other words, I think we can cross the bridge
to the reprinting of these documents for the later record
such occasion should arise when the time comes.

These documents, of course, will remain as they always have, in the Commission's own files and may be referred to. I see no particular inconvenience to anyone and, as a matter of fact, I see a great deal of merit in having all of these in.

* * * * * * * *

[fol. 10729] Trial Examiner: The pending offer contemplates the inclusion into evidence of six folders and the contents or parts of the contents including correspondence between the several companies involved and the Federal Power Commission, both letters received and copies of letters written. It will be very easy to make an obscure record [fol. 10730] at this point. The suggestion which counsel have made in which, apparently all concur, will be adopted.

Mr. Littman will be requested to file, within three days, an index specifying the exact documents or letters which are included in the ruling about to be made and furnish a copy of that index to all counsel.

Since you are all willing to rely on Mr. Littman's discretion in this regard, we will have that index, when it is filed with the Trial Examiner, marked for identification as No. 265 and the several letters and documents designated in that index to be prepared by Mr. Littman will then be received in evidence, by reference.

(The document referred to, when received, will be marked Exhibit No. 265 and received in evidence.)

(The data listed on Exhibit No. 265, to be submitted, will be received, by reference, in the record.)

Mr. Littman: Mr. Examiner: I now request that there be incorporated into the record by reference the 1939, 1940, and 1941 Annual Reports of each of the respondents, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company.

Trial Examiner: You mean the Annual Reports to the Federal Power Commission?

Mr. Littman: Yes, those reports for the years 1939 and [fol. 10731] 1940 have been received and are on file. The 1941 reports, I understand, have not yet been received but will very shortly, I believe probably before the end of the month, be received and, in my judgment, I believe that

sworn statements of the companies with respect to their operations and matters shown in those Annual Reports should be made a part of the record so that reference to them may be made.

I might say that those Annual Reports are not very bulky.

* * * * * * * *

(The annual reports for the years 1939, 1940 and 1941 of respondents are received in the record, by reference.)

* * * * * * * *

[fol. 10738] Mr. Goodman: I present the joint motion of the City of Detroit and the County of Wayne for an order reducing rates of the Defendants forthwith and pending any further investigation by the Commission.

I hand to the Bench five copies and on one of the copies there is endorsed a certificate of service which I will now make.

Mr. Wheat: May I ask, Mr. Goodman, have these documents or any of them been filed with the Secretary of the Commission?

[fol. 10739] Mr. Goodman: No.

Mr. Wheat: As prescribed by the rules—I suppose that is going to be arranged?

Trial Examiner: The Trial Examiner will attend to those matters.

* * * * * * * *

[fol. 10747] Trial Examiner: Now, the other matter in which counsel are probably all interested is the matter of briefs. A trial balloon was released day before yesterday in this matter of briefs and since the remarks of the Trial Examiner, various discussions have occurred here, there and elsewhere and I am also myself under a firm commitment.

The City of Detroit seems quite anxious to have this case submitted and the Trial Examiner has definitely undertaken to file a report or to complete his report, at least, in this case, whether it is actually filed, by June 15. In view of that, the Trial Examiner will now fix the time for the concurrent principal briefs at May 20 and the reply briefs at June 1.

Mr. Culton: Mr. Examiner, you are putting an impossible situation on us there.

Trial Examiner: I want to remark this, gentlemen, that we cannot quite apply normal rules and normal procedures to a time like this. I want your briefs and I know you want to furnish them. If they are going to be any good to me in [fol. 10748] submitting this proceeding to the Commission on the present record, I must have them at the times indicated. It means that not only you but also I work continuously right through from now until, in my case, June 15, more or less day and night. It is a continuous assignment for all of us until we dispose of this.

The case is, after all, rather a simple case. We do not have to analyze and weight evidence to any great extent in it and certain of the questions of law, by which we were in doubt when the proceeding commenced, have been pretty definitely resolved. At least, the Commission has decided as to various points that it has now expresed itself about. The Supreme Court has affirmed various positions the Commission has taken so that I do not see why we should have very lengthy briefs.

You have some points of law to discuss, of course, and I am not attempting to suggest what you shall include in your briefs or what you shall not but I simply say, to me this case seems to involve a few clear-cut principal issues, and, in view of that, I have accepted this commitment that the report of the Trial Examiner will be completed June 15 and if the briefs are to be of help to the Examiner, they must come in by the dates indicated.

Mr. Culton: Mr. Examiner, may I point out our difficulty. Of course, it is going to take, as you suggest, day [fol. 10749] and night work. We have no objection to that. We have done it in getting ready for these hearings and will continue to do it in the preparation of briefs. Although it will press us rather hard, we can meet the assignment of May 20 for the opening brief, but the thing that gives us concern is the June 1 date for reply briefs, bearing in mind we will have to reply to three separate and distinct briefs and we will not have their position until we get their briefs on May 20.

[fol. 10750] Mr. Littman: Mr. Examiner, I have a matter that I have omitted to take up. I would like to have marked for identification with the next exhibit number a document entitled, "Indiana Gas Distribution Corporation—Financial Statement for Year Ending December 31, 1941".

(The Document Referred To Was Marked Exhibit No. 266 For Identification.)

[fol. 10751] (Exhibit No. 266 Was Received in Evidence.)

Trial Examiner: Have counsel for the Defendants any further testimony to present at this time?

Mr. Wheat: No, sir.

Mr. Littman: If Your Honor please, I would like to file with the Commission at this time and I do so by handing you herewith a copy of the instrument that I propose to file which is entitled, "Motion for an Immediate Order Reducing Rates".

I have nothing to present at this time.

Mr. Montgomery: Mr. Examiner, the Intervener wishes to file a motion with the Commission, a motion for an order reducing the rates of Defendants forthwith, pending any further investigation by the Commission, and I hand you [fol. 10752] copy of the original and five true copies.

In that connection, Mr. Examiner, we notice that in the last paragraph of our motion, we set forth the fact that we still have in the course of preparation, certain statistical data and analyses which counsel for the Respondents have very kindly consented to let us furnish them by not later than next Tuesday and it is our intention to file this data in the form of a supplemental motion, if it is agreeable to the Examiner.

Trial Examiner: I believe that may be permitted under the circumstances.

Mr. Wheat: Mr. Examiner, it is my understanding that the fixing of time for filing of briefs which you made this morning eliminates any necessity for formal replies to be

filed to these motions before the Commission. Is that correct?

Trial Examiner: That is true. We will take the record as it is closed today subject only to such enlargement of it as has been clearly placed in the record and the items which have been ruled to be filed after the conclusion must [fol. 10753] be filed at the time fixed. Otherwise, they will be disregarded as will briefs be if they are filed after the date set.

I will ask the reporter to extend into the record at this point first the petition of Commission counsel and next the petition of Michigan Consolidated Gas Company.

* * * * * * * *

[fol. 10768] Mr. Littman: I would like to make certain about one thing so that there may be no misunderstanding in the record.

[fol. 10769] It is my understanding that counsel for the Respondents have no further testimony to present on direct and have stated that they have no testimony to offer at this time with respect to the testimony which the Commission has thus far offered.

Now, that is my distinct understanding of the record at this point. Is that Your Honor's understanding and is that the understanding of counsel for the Respondents?

Mr. Culton: I may state in reply to that that I did not know that we were the moving parties in this proceeding and my understanding is that direct testimony means where you are the moving party. Now, so far as we are concerned, we are just like the old nigger I told about earlier—"We will 'drap' this whole thing right here."

Mr. Littman: Of course, the prima facie case was presented by the petitioner here and then Panhandle Eastern and Michigan Gas went on with their testimony. We want to give them every opportunity to present such testimony as they wish to present with respect to their case-in-chief.

Now, I see no occasion to be technical. I say "direct", I mean in their case-in-chief, and I would like to know whether they rest.

Mr. Culton: I should say we are as near through as you are, Mr. Littman.

Mr. Wheat: We do not intend to be "druy into no more [fol. 10770] holes."

Mr. Littman: I am going to ask, in view of the statements of counsel, that the court reporter be instructed to state at this point in the transcript that counsel for Respondents rest.

Mr. Culton: We do not.

Mr. Littman: That is the clear purport, they either do or do not.

Mr. Culton: We will not let you tell us what we shall say.

Mr. Wheat: And we do not intend, if we can possibly avoid it, having the court reporter saying anything in this record that we have not said.

Mr. Littman: I do not propose to have or give counsel an opportunity to rely upon what I think they are endeavoring to rely upon as a technicality or a basis or claim that they have not had an opportunity to present their entire case in chief. We went forward with our evidence in order to expedite this hearing before they had put in all of their direct case.

Now, they either have put in all their direct case or they have not and I am inquiring whether they have put in their direct case in chief to the resting point or whether they have not and I am entitled to know.

Mr. Culton: Nil dicit.

Mr. Littman: This may seem very humorous to some [fol. 10771] present. It is not the least bit humorous to me.

Mr. Wheat: We have stated our position several times. It is perfectly clear on the record.

Mr. Littman: You have stated it in so many different ways that it can be construed by you almost any way you like to construe it in argument later and I certainly am not going to be charged later that I have failed in my duty with respect to at least undertaking to ascertain what your position is. I would like to have you be frank about it.

Have you or have you not had every opportunity up to this point to complete your case in chief?

Now, if you cannot give me a courteous answer to a courteous question I, of course, cannot force you to answer that but I want to give you an opportunity to do it.

Mr. Culton: We thought you thought you could, Mr. Littman.

Mr. Wheat: We believe, Mr. Examiner, that the record is clear on our position.

Mr. Littman: Why not be frank about this? What are we doing, trying to play on words?

Mr. Culton: That is what I have been wondering about you ever since you started.

Mr. Littman: Have you rested or haven't you rested?

Mr. Culton: We do not have to adopt your language on anything. We have just tried one side of this case.

Mr. Littman: I think I know what you are trying to do [fol. 10772] but you are not going to get away with it.

Trial Examiner: Now, the Trial Examiner might remark that recently in the record, to-wit, at page 10651, the question was put squarely to the attorneys representing the Panhandle Eastern Pipe Line Company and its subsidiaries whether they had any desire at this time to adduce any further evidence of any kind of character and they replied that they did not at this time "unless further evidence comes into the record which we feel should be properly rebutted."

Today an opportunity has been given to present rebuttal testimony.

Mr. Culton: And we said we had no further testimony to offer.

Trial Examiner: And you replied you had none to offer.

Mr. Culton: That is right.

Trial Examiner: And your statement of record on April 21, which was just quoted, still stands, I assume?

Mr. Culton: That is right.

Trial Examiner: The Trial Examiner construes that as being what some lawyers designate as a "rest".

Mr. Culton: It may be we got a little tired right there.

Trial Examiner: We will proceed accordingly.

Mr. Culton: Counsel is unduly alarmed, Mr. Examiner, as to what our intentions may be in the future.

* * * * * * * *

[fol. 10773] Trial Examiner: Well, I think Mr. Lit
concern is to be assured, both across the table and
record, that the Panhandle Eastern Pipe Line Co
and its subsidiaries have not at any time or in any
been denied the requirements of due process in thi
ceeding.

Mr. Culton: That is right, Mr. Examiner, so far
phase of it is concerned. We will not make the cont
that we have not had an opportunity to put on add
testimony here if we had so desired.

Trial Examiner: Of course, we wish to be sure th
have had every opportunity contemplated by the re
ments of due process.

Mr. Culton: There is this we would say. We w
make it clear we think fundamental error was commit
[fol. 10774] the Commission in overruling a petitio
postponement relating to Order 31 and relating to t
situation. We want to make it clear we do not waive
motions and we think the same condition now exist
existed at that time but we recognize that this Exa
has no power over that phase of the case.

Trial Examiner: All other matters having bee
posed of, this hearing will now adjourn without dat
ject to such further action as the Commission may
proper in the premises.

[fol. 10775]

MKT 7-15-41
2 Corrected 7-18-41

Extracts from Registration Statement of Panhandle Eastern Pipe Line Co.
Filed with Securities and Exchange Commission
Feb. 12, 1937 in File No. 2-2867-1-1
In re: Gas Reserves

The Issuer now owns or controls oil and gas leaseholds on approximately 267,800 acres of land, in the Panhandle of Texas, Southwestern Kansas and Texas County, Oklahoma, and in addition controls through gas purchase contracts approximately 44,500 acres of land in this territory. A part of the Issuer's gas supply is obtained from wells heretofore drilled on certain of these leaseholds, the remainder being purchased under contracts, either for the life of commercial production on the leases or for a fixed term, varying from eight to sixteen years, with other producers, in the same general territory. . .

In the opinion of Ralph E. Davis, Inc., consulting geologists and engineers, the combined reserves of the entire Amarillo and Hugoton fields, from which fields the Issuer obtains its supply of gas, are estimated as of February 1, 1937 at approximately 30 trillion cubic feet; it is estimated that gas is being produced in these two fields at the rate of approximately 665 billion cubic feet per year and that this rate of production will be increased considerably; the gas reserves which the Issuer itself controls under leases and gas purchase contracts in these two fields are estimated at approximately 1,874 billion cubic feet, and its delivery requirements, which have increased to a present annual total of approximately 20 billion cubic feet, are expected hereafter to increase as the demand for natural gas increases in the territory which it serves; during the past few years, there has been considerable wastage of the natural gas produced in the Amarillo field; in 1935 the State of Texas enacted a conservation statute which resulted in a substantial reduction of the gas wastage; the statute was attacked by two of the pipe line companies operating out of the Amarillo field, and on February 1, 1937, the Supreme Court of the United States held it to be unconstitutional insofar as it might be construed to permit certain proration orders entered by the Texas Railroad Commission; (*Thompson, et al. v. Consolidated Utilities Company*, No. 89, October Term, 1936), whatever the immediate effect of this decision may be it is probable that the normal operation of economic factors will prevent any gas wastage on a large scale for more than a limited period of time in the future; and after giving consideration to all of the known factors affecting the future supply and probable demand, the Issuer will be able to obtain supplies of natural gas sufficient for its market requirements for a period of not less than twenty-five years.

In the opinion of counsel, the natural gas transmission line operated by the Issuer and its subsidiary, Panhandle Illinois Pipe Line Company, which extends from the Texas Panhandle gas field through the states of Oklahoma, Kansas, Missouri and Illinois to a point near Dana, in Vermillion County, Indiana, is owned by the Issuer and said subsidiary, subject to certain mortgages hereinafter referred to, to farm mortgages on land covered by leases and rights of way owned by the Issuer, to which the Issuer is not a party, and to minor encumbrances and defects in title.

The main pipe line of the Issuer's transmission system, extending, as described in the preceding paragraph, from the Texas Panhandle gas field to Indiana, and so owned by the Issuer and its subsidiary, Panhandle Illinois Pipe Line Company, consists of approximately 351 miles of 24-inch diameter pipe line, 450 miles of 22-inch diameter pipe line, 58 miles of 20-inch diameter pipe line, and an aggregate of 43,300 horse power of gas engine driven compressor units installed in 10 stations.

In addition, meter stations, a dehydrating plant, a natural gasoline extraction plant, and other equipment and property used in the operation and maintenance of a high-pressure gas transmission system, are owned by the Issuer or its subsidiary companies.

In the opinion of The J. G. White Engineering Corporation the Issuer's main transmission system, as originally constructed, including pipe lines, compressor stations, and field and lateral lines, together with all other physical facilities, is of modern design and well constructed, operated and maintained, and the construction of its new transmission facilities reflects sound engineering practice and includes the latest available technical develop-

EXHIBIT 4.

Gentlemen:

In accordance with your request, we have made a study as of September 30, 1940 of the natural gas supply available to your company. The gas produced and purchased by your company and the gas reserves available to it are located almost entirely in the Amarillo field of Texas and in the Hugoton field which includes portions of (a) southwestern Kansas, (b) the Oklahoma Panhandle, and (c) Sherman and Hansford Counties in northwest Texas. These fields together constitute one of the largest known reserves of natural gas.

The conclusions stated herein regarding the reserves of these fields are based upon engineering and geological studies we have made of both of these fields since they each became important as a source of supply of natural gas, including information made available to us in former detailed studies of your company's gas supply, and upon a recent study of both the Amarillo and Hugoton fields. Data regarding acreage controlled, wells owned or under gas purchase contracts, production of these wells and their pressure history have been furnished by officials of Panhandle Eastern Pipe Line Company.

Our most recent study of the Amarillo field indicates that the proven gas acreage covers an area of approximately 1,478,000 acres and that the recoverable gas reserves as of September 30, 1940 are not less than 17.0 trillion cubic feet. Your company owned on September 30, 1940 leases covering a total of 42,136 acres in the proven area of this field, this being approximately 2.85 per cent of the total proven area. Upon these lands there had been completed as of said date a total of 55 wells, 11 of which were completed subsequent to July 1939. The average closed pressure of 40 of these wells in June 1937 was 378.9 pounds. The closed pressure in July 1940 of these 55 wells was 358.9 pounds indicating an average pressure drop of 20.0 pounds in a three-year period. The production of these wells from January 23, 1937 to September 22, 1940, a period of 3 years and 8 months, totaled 55,093,000 M cubic feet or an average production of more than 2 billion cubic feet per pound drop in pressure.

Your company owned gas purchase contracts as of September 30, 1940 covering 23,393 acres in the proven area of the Amarillo field upon which there had been completed a total of 53 wells. Thirty-eight of these wells had an average pressure in June 1937 of 311 pounds and the average of the 53 wells in June 1940 was 308 pounds. During the period from January 23, 1937 to September 22, 1940 these wells had delivered a total of 49,928,000 M cubic feet.

It is evident from the very substantial production obtained with a modest decline in pressure that the acreage upon which your company controls its gas supply in the Amarillo field has a very substantial productive capacity. The total proven acreage controlled through leasehold and through gas purchase contracts, namely 65,529 acres, is equal to about 4.43 per cent of the total proven area of the Amarillo field. It is our judgment that your company thus controls approximately this percentage of the total recoverable reserve, that is, approximately 750 billion cubic feet. A

Of the company-owned leases held on September 30, 1940 covering a total of 42,136.30 acres of proven gas lands in the Amarillo field, 30,005.7 acres are classed as producing acreage, having a proven gas reserve which we estimate at 361,769,000 M cubic feet. The remaining owned proven leaseholds, totalling 12,130.6 acres are classed as unoperated, and have an estimated gas reserve which we estimate at 146,254,000 M cubic feet. The gas purchase contracts owned by your company September 30, 1940, covering gas purchases in the Amarillo field, control the gas under 23,393 proven acres, R

Nov. 15, 1940 in File No. 2-4579-1-1
In re: Gas Reserves

4a

Our most recent study of the Hugoton field indicates the proven and semi-proven area to be not less than 2,000,000 acres and the total recoverable gas reserve as December 31, 1939 to be not less than 15 trillion cubic feet. In the proven or semi-proven portion of this field your company owns full-interest leases covering 175,030 acres, also one-half interest in an additional 18,428 acres. The gas supply from the unowned one-half interest is under contract to your company, hence the reserves under 193,458 acres are thus controlled.

4023

Your company owned as of September 30, 1940, 33 wells on its wholly-owned Hugoton leasehold acreage. The average pressure of 26 of these wells in June 1937 was 421 pounds and the average pressure of the 33 wells in July 1940 was 414 pounds. During the period from January 23, 1937 to September 22, 1940, these wells produced 11,384,000 M cubic feet.

On September 30, 1940 there had been completed 34 wells on the 18,428 acres in which your company owned one-half interest. Twenty-four of these wells had an average pressure in June 1937 of 415 pounds and the 34 wells had an average pressure in July 1940 of 411 pounds. During the period January 23, 1937 to September 22, 1940 these wells produced a total of 11,876,000 M cubic feet.

The company-owned full-interest leases covering a total of 175,030.25 acres in the proven or semi-proven portion of the Hugoton field, include 19,090.95 acres classed as operated, and have a proven gas reserve estimated by us at 126,189,000 M cubic feet. The remaining 155,939.30 acres of full-interest leases are classed as unoperated, and have gas reserves estimated by us at 1,030,739,000 M cubic feet. C D

The fifty per cent interest owned by your company in 18,428 acres of proven or semi-proven leasehold property includes a total of 17,320 acres classed as operated, and have a gas reserve estimated by us at 114,483,000 M cubic feet. The remaining 1,108 acres are classed as unoperated and have an estimated gas reserve of 7,324,000 M cubic feet. E F

Your company owned on September 30, 1940 gas purchase contracts controlling 33,475 acres in the Hugoton field upon which there had been completed 68 gas wells. Fifty of these wells had an average pressure in June 1937 of 420 pounds and 67 wells had an average pressure in July 1940 of 415 pounds. These wells produced during the period January 23, 1937 to September 30, 1940 a total of 24,919,000 M cubic feet. These 33,475 acres are classed as operated and have a proven reserve which we estimate at 221,265,000 M cubic feet. G

The total proven or semi-proven acreage controlled by your company in the Hugoton field through leasehold and gas purchase contracts on September 30, 1940 was 226,933 acres. This is more than 10 per cent of the total proven and semi-proven area as now defined. It is our judgment that your company thus controls gas reserves as of September 30, 1940 in the Hugoton field of not less than 10 per cent of the total reserve of said field, that is, not less than 1.5 trillion cubic feet.

Both the Amarillo and Hugoton fields constitute reservoirs of gas from which gas withdrawals will not necessarily be proportional to the reserves controlled by various producers. The reserves are, we believe, sufficient to meet the combined anticipated requirements for pipe line, carbon black and other uses for a period of more than 25 years.

The combined gas supply controlled by your company in the Amarillo and Hugoton fields is, in our judgment, adequate to supply its present markets and any reasonably anticipated increase in the gas requirements of said markets for a period of more than 25 years.

Very truly yours,

RALPH E. DAVIS, INC.

by RALPH E. DAVIS,
President

The Registrant also owns oil and gas leaseholds on (a) certain acreage outside proven limits of the Amarillo and Hugoton fields and (b) approximately 1,100 acres on which is located one well and a half interest in approximately 10,000 acres on which are located twelve wells in the Hugoton field the gas from which is sold under contract to the Argus Natural Gas Company, Incorporated.

pipe lines, in-
ing multiple lines, owned by the Registrant and by Illinois Natural Gas Company, of September 30, 1940

Nominal diameter inches	Main transmission lines	Branch or lateral lines	Gathering and well lines
24	733	—	—
22	534	—	—
20	83	—	8
18	72	—	13
16	39	68	35
12	10	53	25
10	33	52	76
Various Sizes 8 to 2	—	386	512
Total	1,504(1)	559(2)	669

(1) Includes 82 miles of 24" and 24 miles of 20" pipe line under construction at September 30, 1940 which are scheduled for completion prior to December 31, 1940.

(2) Includes 68 miles of 16", 32 miles of 12", 37 miles of 10", and 87 miles of various sizes from 8" to 2" pipe line owned by Illinois Natural Gas Company.

Lines owned by Central Distributing Company are used for retail distribution of al gas as set forth in Item 5, and are not included in the foregoing table.

The Registrant owned the following compressor stations, as of September 30, 1940

Station	Total rated horsepower
Sneed	5,200(1)
Hansford	3,000(2)
Liberal	10,000(3)
Greensburg	7,800
Haven	7,800
Olpe	7,800
Lousburg	7,000
Houstonia	6,500
Centralia	6,500
Pleasant Hill	6,500
Glenarm	6,000
Tuscola	5,100
Three small stations	860
Total	80,960

(1) Of the 5,200 total rated horsepower at Sneed Station, 1,300 was under construction at September 30, 1940 and is scheduled for completion prior to December 31, 1940.

(2) This station was under construction at September 30, 1940, and is scheduled for completion prior to December 31, 1940.

(3) The Registrant's natural gasoline extraction plant and this compressor station are located on the same site.

P. McDonald Biddison, consulting engineer, Dallas, Texas, has made an examina-n of the properties of the Registrant and its subsidiaries and submitted a letter ereon. Such letter follows:

P. McDONALD BIDDISON
CONSULTING ENGINEER
Dallas Gas Building
Dallas, Texas

November 2, 1940

oard of Directors
anhandle Eastern Pipe Line Company
entlemen:

On several occasions beginning in March, 1937, I have been engaged in studies and vestigations of the business and properties of your company and of its Subsidiary ompanies. These studies and investigations have included the reviewing of construc-on plans, determining safe operating pressures and system capacities, the prepara-on of property valuations, and studies of property depreciation.

I have examined a great deal of the property and have inspected plans and specifications under which it was constructed. The Company owns or controls under purchase contracts, gas reserves in the largest gas fields ever known, adequate, for the requirements now in prospect, for a term of at least twenty-five years. The compressor stations on the main system are carefully designed, their equipment is first class in all respects, they present a neat and attractive appearance and are maintained in excellent condition. All these features tend to produce reliability and economy of operation. The main transmission system has been constructed with a margin of safety as to pressure so that it may safely be operated at 500 pounds compressor station discharge pressure. Stream crossing locations have been carefully selected and multiple lines across streams so located and installed as to leave very slight probability of interruption at such locations. The transmission lines have been well located and well laid to secure stability and are carefully maintained. The main line loops completed in 1937 provide additional protection against service interruption and this protection will be enhanced by the loop extensions recently completed and by those now under construction. The Gasoline Plant at Liberal is of modern design and the dehydration plant in connection with it is an effective preventive of interruptions of service from freezing of lines. Measuring and Regulating Stations are of up to date equipment, are carefully maintained and the stations are neat and clean. Little evidence of deterioration in the main line property can be found. Pipe exposed in making connections for 1937 and 1940 additions did not indicate interior corrosion. Flow tests of the main lines in 1937 and 1938 showed some fouling, not corrosion, of the old lines westward from Olpe Station to Liberal Station. This condition has been effectively remedied as evidenced by subsequent flow tests and by capacity obtained under routine operations. Routine reports show little deterioration of protective coating and pitting of pipe except in a few very restricted areas. Such areas are being protected cathodically as they develop.

My studies of the system's capacity indicated a sales capacity of the main line system, including the deliveries at Dana and with the distribution of the deliveries west of Dana as they then existed, prior to the loop extensions of the 1940 construction program, to be in round numbers 200,000 M.C.F. per 24 hours, all of which capacity was used to render service during the past winter. Upon completion of the extensions of the loops by the 1940 construction program, now over 95 per cent completed, the corresponding capacity will be, in round numbers, 250,000 M.C.F. per 24 hours. Facilities for the delivery of this peak load will be fully adequate upon the completion of field compressor station construction now in progress and scheduled for completion prior to December 31, 1940.

Yours very truly,

P. McDONALD BIDDISON
Consulting Engineer

Character of Ownership

The statements in answer to this Item 7 with respect to ownership are made upon the authority of Glenn W. Clark, Esq., head of the Registrant's legal department. In his opinion, based in part upon opinions of various local counsel, the above mentioned production property and transmission property are owned by the Registrant or by its wholly owned subsidiary (Illinois Natural Gas Company) as indicated above, subject to certain mortgages hereinafter described, to farm mortgages (to which neither the Registrant nor Illinois Natural Gas Company is a party) on land covered by leases and rights-of-way owned by the Registrant and Illinois Natural Gas Company, and to minor encumbrances and defects in title. The compressor stations mentioned are located on land owned in fee by the Registrant. The pipe lines of the Registrant and Illinois Natural Gas Company are located either (1) under or over rivers, highways and other public places under permits referred to in Item 8 hereof, or (2) under or over private property by virtue of rights-of-way or easements obtained from the persons who, at the time such rights-of-way or easements were obtained, were the last grantees of record of the fee title to the land involved. Substantially all the pipe lines of the Registrant and of such subsidiary are located on lands over which rights-of-way or easements have been secured and at the time such rights-of-way or easements were secured inquiry was made as to the existence of farm mortgages upon the lands covered thereby and in many instances agreements were obtained from mortgagees sub-

[fol. 10795] Exhibit 8.

Panhandle Eastern Pipe Line Company
Michigan Gas Transmission Company

Effect of 100% Load Factor on Earning Power of System

At 100% Load Factor the Michigan Consolidated Gas Company rate results in the following charge per therm:

12x$0.38 per therm annual demand charge	$ 4.56
365x$0.015 commodity charge	5.475
or a total cost for 365 therms of	$10.035
which is at the rate of	$0.0275 per therm

and with 1,055 BTU per cu. ft. gas the gate rate is

$\frac{100,000}{1,055}$ x $0.0275, or $0.26 per M cu. ft.

A 100% load factor and 250,000 M cu. ft. per day capacity provide a load of 91,250,000 M cu. ft. per year. At 25¢ per M cu. ft. this will produce a revenue of $23,725,000. After deducting operating expenses and taxes (taxes not adjusted for increased income taxes and excess profit taxes from such revenue) of $6,473,000 there would remain $17,252,000 for depreciation, depletion, amortization and return on the average cost new during 1940 of $73,044,000, or at the rate of 23.6% per year.

[fol. 10796] Exhibit 9.

Factors Affecting the Nature and Magnitude of Reported Net Incomes

The net income or net operating income disclosed on the income statement of any company will depend on the manner of accounting for costs resulting from the "risks" previously referred to. If these costs are classified as operating expenses, relatively low net incomes or net operating incomes will appear on the income statement. If they are classified as deductions from income or appropriations of surplus, a larger net income will be shown. Before determining the rate of return applicable to an enterprise it is therefore necessary to determine the accounting treatment prevailing with respect to costs resulting from risks. There are certain particular costs with respect to which there still is substantial variation in practice as between companies and which therefore have a particular significance with respect to the relative magnitudes of income shown on income statements. These points are:

(1) The extent to which losses of various kinds are provided for through the purchase of insurance, through self-insurance reserves or by inclusion, when incurred, in current operating costs.

(2) The specific point of transition from the classification of costs as operating costs to capital costs. This involves primarily the distinction between repairs charged

directly as current operating costs and repairs involving replacement in kind charged through the depreciation reserve account. It also involves the use of more substantial, and usually more expensive, construction in place of cheaper construction subject to greater maintenance, repair and physical depreciation charges.

[fol. 10797] (3) The specific character of the depreciation accounting practices. Particularly the extent to which current depreciation charges reflect wear and tear, rot and decay, inadequacy, obsolescence, changes in the art, storms, floods and other disasters, and the requirements of civil authorities.

(4) The extent to which the cost of changes resulting from requirements of civil authorities are compensated for by specific payments.

(5) The extent to which infrequently recurring costs resulting from unforeseen retirements, i. e., from storm, flood, and similar disasters or unforeseen developments in the art or changes in public demand have been included either in (a) current operating costs, (b) provided for out of current or accrued surplus, or (c) guarded against by more substantial construction.

(6) The extent to which improvements in the art are acquired, either (a) by the conduct of a research department, the costs of which are included either in (1) the current operating costs, or (2) in the cost of fixed capital items, or (b) by the acquisition of patents from others, the costs of which are included either in (1) the current operating costs, or (2) in the cost of fixed capital items.

(7) The extent to which management costs, in many forms of investments necessarily met out of returns, are included in current operating costs.

(8) The nature and magnitude of risks peculiar and individual to the natural gas industry as conducted by the companies under discussion but not included in the preceding list and not common to all the business of the Nation as a whole. Among these would be the risk that,

during periods of prosperity natural gas use and profits would not increase as rapidly as business and business profits generally, and that during periods of depression the gas business and profits would decrease more rapidly than business and business profits generally. Conversely, this could be a benefit if the gas business and profits increased more rapidly during business prosperity and did not decrease as fast or as far during depression periods. In this class would also come the variation in probability of supersession by other means of heat energy supply as compared with the general probability of supersession of [fol. 10798] other tools of enterprise. (This, of course, relates only to that portion of the risk not previously provided for in (5) and (6) in connection with obsolescence and similar provisions.

(9) The relation between the price level at which a cost was incurred, the probable price levels at which various parts of the cost will be recovered, the price levels of other commodities at the same instances and the particular point during the investment period at which the rate of return under discussion is to apply.

(10) As between enterprises the practice differs with respect to the accounting treatment of bad debts. If a net income is calculated on the basis of total sales or billings without adjustment for uncollectible bills or bad debts, the costs incident to the incurrence of these must be met out of the income. On the other hand, if the income is determined on the basis of actual cash receipts or after allowance for bad debts in operating expenses, the reported income is exclusive of this risk and lower than it would be under the first condition.

(11) Certain investments, particularly state and government bonds, are partly or entirely exempt from taxation. In making comparisons between the returns on securities of this kind with returns on other investments, this factor must be properly reflected.

Release No. 2778

In the Matters of

Panhandle Eastern Pipe Line Company,

File Nos. 31-109, 31-493, 31-108

Columbia Oil & Gasoline Corporation,

File Nos. 31-107; 31-106

Columbia Gas & Electric Corporation,

File Nos. 31-422, 31-423

Public Utility Holding Company Act of 1935—Section 2(a) (8)

Findings and Opinion of the Commission.

Declaration of Status

Subsidiary Company

Applications filed pursuant to Section 2(a) (8) of the Act requesting orders declaring companies not to be subsidiary companies of specified holding companies owning more than 10 percent of applicants' outstanding voting securities, denied in part upon applicants' failure to show that their management and policies are not subject to a controlling influence by such holding companies within the meaning of Section 2(a) (8) of the Act, and granted conditionally insofar as it appears that one of such holding companies did not exercise such control or controlling influence over one of applicants.

Appearances:

William L. Glenn and Edward N. Goodwin for Panhandle Eastern Pipe Line Company.

Douglas M. Moffat and William Wemple, of Cravath, deGersdorff, Swaine & Wood, for Columbia Gas & Electric Corporation.

William H. Button and James B. Alley, for Columbia Oil & Gasoline Corporation.

[fol. 1080A] Robert J. Bulkley, Richard B. Hand, and Arthur G. Logan, for Missouri-Kansas Pipe Line Company.

Kenneth L. Sater, Assistant Attorney General, for the Public Utilities Commission of Ohio.

James H. Lee, for the City of Detroit.

Ambrose Selig and John Houser, for the Public Utilities Division of the Commission.

This proceeding arises out of a series of applications involving the status, under the Public Utility Holding

Company Act of 1935, of Columbia Oil & Gasoline Corporation and Panhandle Eastern Pipe Line Company. Both of these companies have filed applications under Section 2(a) (8) of the Act for orders declaring them not to be subsidiaries of Columbia Gas & Electric Corporation.[1] Columbia Gas & Electric Corporation, a registered holding company, has applied for orders declaring that neither of these companies is its subsidiary.[2]

The application of Panhandle Eastern Pipe Line Company, in addition, requests orders declaring it not to be a subsidiary of Columbia Oil & Gasoline Corporation or Missouri-Kansas Pipe Line Company.[3]

Panhandle Eastern has also applied for an order declaring it not to be a gas utility company within the meaning of Section 2(a) (4) of the Act,[4] and Columbia Oil has requested exemption for itself and its subsidiaries pursuant to Section 3(a) (3) of the Act.

[fol. 10810] On February 13, 1941, we ordered the hearings upon these applications consolidated.[5] We permitted intervention by the City of Detroit, and, because of an interest which will subsequently be commented upon, we permitted Mokan to participate in the proceeding to the extent of cross-examining witnesses, adducing evidence, filing briefs and presenting oral argument on matters involving Panhandle Eastern.

---

[1]The Columbia Oil & Gasoline Corporation application was finally amended on March 28, 1941, (File No. 31-107). The Panhandle Eastern Pipe Line Company application was finally amended on December 3, 1940, (File No. 31-109).

[2]These applications dated April 7, 1938, relate also to certain subsidiaries of both Columbia Oil & Gasoline Corporation and Panhandle Eastern Pipe Line Company (Files No. 31-422, 31-423).

[3]In the course of this opinion the various companies involved will be referred to as follows:

Panhandle Eastern Pipe Line Company—Panhandle Eastern
Columbia Oil & Gasoline Corporation—Columbia Oil
Columbia Gas & Electric Corporation—Columbia Gas
Missouri-Kansas Pipe Line Company—Mokan
Michigan Gas Transmission Corporation—Michigan Gas

All of these companies are Delaware corporations.

[4]File No. 31-108. The latest amendment to this application occurred on February 1, 1941.

[5]Holding Company Act Release No. 2554, February 13, 1941.

After due notice a hearing was held. After conference before us between counsel involved, counsel agreed to forego a trial examiner's report. Requests for findings and briefs were filed and we heard argument.

In our order of February 13, 1941, we provided for consolidation of the hearings with respect to all the applications noted above. This order expressly reserved our right, "if at any time it may appear conducive to an orderly and economic disposition of either proceeding, to order a separate hearing concerning either matter, to close the record with respect to either matter, or to take action on either matter prior to closing the record on said other matter." Thus far, the issues presented under Section 2(a) (8) have completely absorbed the attention of all parties to the proceeding. It has been suggested that it would be highly desirable to have our decision on the questions under Section 2(a) (8) at the earliest possible date; and we have been requested by counsel for the Public Utilities Division to defer consideration of the applications under Sections 2(a) (4) and 3(a) (3) until the staff shall have had more time to study and appraise them and prepare any further presentation of evidence or argument which may seem appropriate. We think it conducive to an orderly and economic disposition of this proceeding to grant this request, and we shall decide here only the questions arising under the Section 2(a) (8) applications. We expect, of course, that immediate steps will be taken for study of the problems presented in the Sections 2(a) (4) and 3(a) (3) applications with a view to their speedy determination.

The Applicants

Panhandle Eastern is a company engaged in the production, transmission and sale of natural gas. It taps fields in Texas and Kansas, and its lines run through Texas, Oklahoma, Kansas, Missouri and Illinois. It has outstanding:

$12,000,000 Series B 3% bonds due November 1, 1960

$6,250,000 Series A 6% bonds due serially November 1, 1946 to November 1, 1950

$5,000,000 of notes due serially November 1, 1942 to November 1, 1945

[fol. 10811]

Class A, $100 par preferred stock,* $6 cumulative, participating	100,000 shares
Class B, $100 par preferred stock, * $6 cumulative, non-participating	10,000 shares
Common stock, no-par	807,367 shares

* (Class A stock is redeemable, Class B is not)

All of Panhandle Eastern's preferred stock is held beneficially* for Columbia Oil, and Columbia Oil owns beneficially 404,326 shares, or 50.1% of Panhandle Eastern's common stock. 339,475 shares, or 42.0% of the common stock, is owned by Mokan. The remaining 7.9% is in the hands of over 1,700 holders. The bonds of Panhandle Eastern (many of which are bearer bonds) are stated to be held by interests unaffiliated with the Columbia companies.

All classes of Panhandle Eastern's stock vote share for share except in the election of directors. In such elections the Class A preferred has no vote; the Class B preferred as a class has the right to elect two out of a total of nine directors; and the common stock as a class, with the privilege of voting cumulatively, has the right to elect the other seven. Thus, subject to considerations to be discussed further on in this opinion, Columbia Oil has a substantial voice in Panhandle Eastern's affairs and is empowered to select a majority of its board.

Columbia Oil was formed by Columbia Gas in 1930 to acquire the securities of oil and gasoline subsidiaries of Columbia Gas. It has outstanding the following securities:

6% debentures due 1956	$21,000,000 principal amount
Preferred stock, participating	400,000 shares
Common stock, $1 par	2,336,826 shares

*The manner and occasion for this holding will be discussed subsequently

Columbia Gas holds all the preferred stock, which has full voting rights, and may elect the largest minority of the Columbia Oil board. Columbia Gas also holds all of the outstanding debentures. It holds none of the common stock. This stock, issued to Columbia Gas on the formation of Columbia Oil in 1930, was in the same year placed in a voting trust. The voting trust certificates were, in that year, distributed to the holders of Columbia Gas common stock as a dividend. The identity of record common stock ownership of Columbia Oil and Columbia Gas which existed by virtue of this distribution has decreased from the original 100% to about 72%. The voting trustees of this trust were at all times persons presently or previously connected with the Columbia Gas management. The trust was terminated on May 28, 1936, and the stock distributed to the beneficial owners.

[fol. 10812] Columbia Oil and Panhandle Eastern are thus subsidiaries of Columbia Gas, and Panhandle Eastern is a subsidiary of Columbia Oil under Section 2(a) (8). It is contended, however, that there is no chain of control or controlling influence making it necessary to subject either Columbia Oil or Panhandle Eastern to the requirements of the Act applicable to subsidiaries of registered holding companies.[7]

---

[7] Section 2(a) (8) defines the term "'subsidiary company' of a specified holding company" to mean "any company 10 per centum or more of the outstanding voting securities of which are directly or indirectly owned, controlled, or held with power to vote, by such holding company (or by a company that is a subsidiary company of such holding company by virtue of this clause or clause (B)), unless the Commission, as hereinafter provided, by order declares such company not to be a subsidiary company of such holding company."

Upon application, the Commission may declare that a company is not a subsidiary company of a specified holding company only if it finds that:

"(i) the applicant is not controlled, directly or indirectly, by such holding company (either alone or pursuant to an arrangement or understanding with one or more other persons) either through one or more intermediary persons or by any means or device whatsoever, (ii) the applicant is not an intermediary company through which such control of another company is exercised, and (iii) the management or policies of the applicant are not subject to a controlling influence, directly or indirectly, by such holding company (either alone or pursuant to an arrangement or understanding with one or more other persons) so, as to make it necessary or appropriate in the public interest or for the protection of investors or consumers that the applicant be subject to the obligations, duties and liabilities imposed in this title upon subsidiary companies of holding companies."

The Relationship Between Columbia Oil and Columbia Gas

Columbia Oil was used as a vehicle by Columbia Gas for investment in Panhandle Eastern, and Columbia Gas has been the sole source of capital for this investment.[8] [fol. 10813] We shall note later the effect of this investment on the affairs of Columbia Oil and Panhandle Eastern, for out of it Columbia Gas expected "a certain flow

[8]Columbia Oil's investment in Panhandle Eastern began in 1930. On September 17, 1930, Mokan, which then owned all of the common stock of Panhandle Eastern, sold 50% of that stock to Columbia Oil. Mokan then transferred the remaining half of Panhandle Eastern's stock to Panhandle Corporation, all of whose securities Mokan held. Mokan, which had issued notes for over $1,000,000 with 90% of Panhandle Corporation's stock pledged as security, lost 75% of that stock in 1933. This stock was subsequently on February 6, 1936, acquired by Columbia Oil which also acquired all of Panhandle Corporation's indebtedness.

On October 23, 1930, Columbia Oil purchased from the National City Bank Panhandle Eastern's first mortgage bonds in the principal amount of $20,000,000.

Early in 1931 Panhandle Eastern received capital from Columbia Oil for pipe line construction in the amount of $1,945,500 in exchange for which it issued to Columbia Oil that amount in 6% notes and 109,900 shares of its common stock. Mokan through Panhandle Corporation made an equal capital contribution and took an equal amount of notes and stock.

Columbia Gas, in order to enable Columbia Oil to invest in Panhandle Eastern, had advanced to it, by the end of 1935, $32,232,652.24. Columbia Oil in return gave its notes, secured by the pledge of the Panhandle Eastern's securities received by it. Columbia Gas also advanced to Columbia Oil $1,882,071.75 for investment in the securities of Indiana Gas Transmission Corporation in exchange for Columbia Oil 6% notes. On February 28, 1936, in a transaction which we shall subsequently discuss, Columbia Oil surrendered the securities of Indiana Gas to Columbia Gas in exchange for its notes secured by those securities.

In 1936 Columbia Oil transferred to Columbia Gas $14,574,500 of Panhandle Eastern mortgage bonds and in exchange Columbia Gas cancelled that amount of Columbia Oil's indebtedness to it. Columbia Gas sold these bonds to several insurance companies in July of 1936, at a profit of $722,895.

The present round figure of $21,000,000 of Columbia Oil debt held by Columbia Gas is accounted for by Columbia Gas' purchase of an additional $3,342,000 of debentures, $2,000,000 of which was used by Columbia Oil for the purchase of 80,000 additional shares of Panhandle Eastern common stock.

Between 1936 and 1939 the holdings of Mokan and Columbia Oil in the common stock of Panhandle Eastern were equalized. The present unequal division of the common stock between these companies results from the distribution by Mokan to its stockholders, in 1939, of a block of warrants for 80,000 shares. This transaction will be discussed further on in this opinion.

of earnings," and assurance of "future voting rights." Columbia Oil, although it is merely a means of administering assets placed in its hands by Columbia Gas nevertheless claims independence from that company.

There has been no serious attempt to negative the existence of control of Columbia Gas over Columbia Oil prior to June 7, 1934. The positions of officers and directors of both companies were concededly interlocking. It is asserted, however, that a reorganization of the relationships of these companies has resulted in a severance of control.

[fol. 10814] 1. The first step of severance is claimed to have occurred on June 7, 1934.[9] On that day with one exception, all persons who were officers or directors of Columbia Gas resigned their positions in Columbia Oil, and one, who held positions with both Columbia companies, resigned from Columbia Gas. Messrs. Harrop, Watkins, Philips and Munroe constituted the new Columbia Oil board.

The background of these new directors is significant. Harrop, it was asserted, had no prior connection with Columbia Gas. However, he joined the board of Columbia Oil at the invitation of Munroe who had been a Director and Vice-President of Columbia Gas and was a voting trustee for the Columbia Oil common stock.[10] Watkins had served with Panhandle Eastern as Assistant Secretary and Treasurer from 1931 to 1934. He had also been connected with various other Columbia Gas subsidiaries until 1932. Philips had been a director of Columbia Gas from 1926 to 1930. Munroe's affiliations have been stated.[11]

2. The next steps toward severance are alleged to have occurred as a result of a government suit for violation of the anti-trust laws.

---

[9]It appears that at about this time Columbia Gas may have had some intimation of the imminence of an anti-trust suit and that this knowledge was one of the principal reasons for the changes in personnel and affiliations. The anti-trust suit will be discussed subsequently.

[10]Munroe resigned his connections with Columbia Gas on June 7, 1934.

[11]Messrs. W. A. Blind and C. A. Lavin were elected Assistant Secretaries of Columbia Oil at the June 7, 1934, meeting. Both had been, up to that time, in the personal employ of Munroe.

A. The Anti-Trust Suits

In March of 1935 the United States filed a petition naming as defendants Columbia Gas, Columbia Oil, G. H. Howard, P. G. Gossler, C. A. Munroe, T. B. Gregory, Edward Reynolds, Jr., Burt R. Bay and J. H. Hillman, Jr. The petition alleged domination of Panhandle Eastern by the defendants for the purpose of preventing it from competing with Columbia Gas. It requested an injunction against such domination and the divestiture of ownership by Columbia Oil of Panhandle Eastern securities.

In July of 1935 an action for treble damages was brought against the same defendants named in the government suit by H. T. Bush and C. Ray Phillips, receivers for Mokan, on allegations substantially similar to those made in the government suit. On January 29, 1936—a critical date in these proceedings, a stipulation was entered into between the United States and the defendants in its suit, and a consent decree was entered upon that stipulation. The applicants rely upon the operation of this decree for their claim that the current of control between them has been insulated.

[fol. 10815] B. The Terms of the Stipulation and Decree

The stipulation contained, among others, undertakings for:

1. A financial reorganization of Columbia Oil to effect partial liquidation of Columbia Oil's debt to Columbia Gas, conversion of the remainder into at least fifteen year obligations to be held by Columbia Gas, and conversion of the then outstanding classes of Columbia Oil's preferred stock into one class—to be held by Columbia Gas, and pursuant to which Columbia Gas might elect the largest minority of the Columbia Oil board.[12]

2. Assurance that the officers, and the majority of Columbia Oil directors were not to be officers, directors or employees of Columbia Gas.

[12]Columbia Oil was, prior to the time of the decree, in heavy default on its notes and in arrears of $22,000,000 in dividends on its preferred stock. Columbia Gas was, therefore, in a position to assert an immediate claim on the assets of Columbia Oil.

3. Dissolution of the voting trust with respect to Columbia Oil common stock, and granting to that stock cumulative voting rights.

4. Permission to Panhandle Eastern to make final commitments to carry out a contract which it had made with the Detroit City Gas Company to supply gas to Detroit,—a point east of the then terminus of its lines.

5. An offer of settlement to be made by Columbia Oil to the Mokan receivers, with respect to the claim made by Mokan against the Columbia companies, which settlement would permit Mokan to acquire one-half of Panhandle Eastern's common stock, subject to conversion rights of any preferred which Panhandle Eastern might issue, and "other conditions" of the offer which might "alter the proportionate interest of the various parties" in Panhandle Eastern.

The decree enjoins, in broad language, the exercise of domination or control of Panhandle Eastern, interference with its free action in the natural gas business, and exercising any influence over it, and it further purports to enjoin the defendants from ". . . holding, acquiring, voting or in any manner acting as the owners, directly or indirectly, of the whole or any part of the stock or other share capital, or bonds" of Panhandle Eastern or any company owning a substantial amount of Panhandle Eastern securities or assets of Panhandle Eastern.

Notwithstanding the foregoing provisions, the decree expressly permits:

[fol. 10816] 1. The defendants to own stock and bonds of Columbia Gas and Columbia Oil, and to act as officers and directors thereof;

2. Columbia Gas to acquire obligations with no present or potential voting rights, of Panhandle Eastern, (although it interdicts acquisition of Panhandle Eastern's physical assets by enforcing the obligations);

3. Columbia Oil to own and acquire stock or bonds of Panhandle Eastern and vote Panhandle Eastern's securities in accordance with the decree.

30, Testimony of Rufus M. Smith	10958	4103
Schedule 2, Estimated Original Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10986	4125

	Original	Print
Schedule 3, Estimated Remaining Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10987	4125
Schedule 5, Comparison of Open Flow Potentials in Texas Panhandle Gas Field	10990	4129
Schedule 6, Gas Acreage owned and under Gas Purchase Contracts held by Panhandle Eastern Pipe Line Company as of June 30, 1941	10991	4131
Schedule 7, Hugoton Production to Argus Natural Gas Company, Inc. by Panhandle Eastern Pipe Line Company, et al	10992	4133
Schedule 8, Texas Production to Panhandle Eastern Pipe Line Company	10993	4135
Schedule 9, Hugoton Production to Panhandle Eastern Pipe Line Company	10997	4143
Schedule 10, Hugoton Production to Panhandle Eastern Pipe Line Company	11000	4149
Schedule 11, Analysis of Cumulative Production to Main Line to and including Fiscal Month of June 1941	11003	4155
Schedule 12, Comparative Statement of Production and Purchases from each District for the two Years ended June 22, 1940 and June 22, 1941	11004	4157
36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co.	11047	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12162	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs —west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Detail of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities, years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59, Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297
60, Statement showing Sales Agreements with other Gas Companies as at June 30, 1941	13230	4299
61, Study of Current and Future Trends in Commodity Prices and Wages, by David Friday	13238	4310
Graph showing Wholesale Prices from 1800 to 1940	13239	4311
Index Numbers of Wholesale Prices of Commodities by Groups	13241	4313
Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13266	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4347
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation	13321	4349
Table of Contents	13322	4349
Statement of Experience and Qualifications of Paul B. Coffman	13327	4354
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13348	4371
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13351	4373

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375
Statement B, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13353	4377
Statement B-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13354	4379
Statement C, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13355	4381
Statement C-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13356	4383
Statement D, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13357	4385
Statement D-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941 January-August, Both Inclusive	13358	4387
Statement E, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13359	4389
Statement E-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13360	4391
Statement F, General Information Covering each Company as to the Nature and Size of the Business and the Territory served	13361	4393
64, Statistics supporting Data, Exhibit 63, Appendixes A, B, and C	13379	4414
Appendix A, Complete List of Companies studied and Reasons for eliminating those not used to determine Investors' Appraisal of Risks of Capital	13380	4414
Appendix B, Securities of forty three Natural Gas Companies considered Representative of the Industry, etc	13387	4426

Index, Volume X.

Appendix C, Working Papers showing the Computation of Investors' Appraisal of the Risks of Capital	13398	4446
Water Companies	13399	4447
Electric Operating Utility Companies	13420	4461
Manufactured and Mixed Gas Companies	13465	4501
Natural Gas Companies	13495	4521
65, Study relative to Rate of Return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corporation	13533	4547
Table of Contents	13534	4547
Chart No. 1, Main Transmission System of Panhandle Eastern Pipe Line Co. and Subsidiary	13542	4559
Chart No. 2, Growth of Natural Gas Industry in United States of America from 1906 to 1940	13548	4567
Chart No. 3, Consumption of Natural Gas in United States of America from 1919 to 1940	13550	4571
Chart No. 4, Revenue from Natural Gas Consumed in United States of America from 1919 to 1940	13552	4573

	Original	Print
Chart No. 5, Average Revenue per M. C. F. from 1929 to 1940	13554	4575
Chart No. 6, Panhandle Sales by States, vs. Industry Consumption of Natural Gas from 1934 to 1940	13556	4577
Chart No. 7, Trends of Gross Revenue from 1934 to 1940, Panhandle vs. other Pipe Line Companies and Industry	13558	4579
Chart No. 8, Operating Ratio of Panhandle Compared with other Pipe Line Companies from 1934 to 1940	13560	4581
Chart No. 9, Trend of Revenue and Expense of Panhandle Eastern Pipe Line Company from 1934 to 1940	13562	4583
Chart No. 10, Percent Earned on Invested Capital of Panhandle Based upon Capital Structure	13564	4585
Chart No. 11, Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital	13566	4587
Chart No. 12, Return to Common Stockholders of Panhandle Eastern Pipe Line Company from 1934 to 1940	13568	4589
Chart No. 13, New Tax Bill will reduce Income sharply Computations based on Operations — Twelve Months ended June 30, 1941	13570	4591
Chart No. 14, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13572	4593
Chart No. 15, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13574	4595
Chart No. 16, Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Company — from 1930 to 1941	13576	4599
Chart No. 17, Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company	13578	4603
Chart No. 18, Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Company from 1937 to 1941	13580	4605
Chart No. 19, Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks from 1937 to 1940	13582	4607
Chart No. 20, Current Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks	13584	4609
Chart No. 21, Cost of Financing Northern Natural Gas Company Common Stock — Offered to Public on September 10, 1941	13586	4613
Chart No. 22, Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company	13588	4615
Chart No. 23, Continuing Growth of Panhandle System Indicates Future Needs for New Capital	13590	4617
Chart No. 24, Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941	13592	4621
Chart No. 25, Preferred Stock Unusual in Natural Gas Pipe Line Companies	13594	4623
Chart No. 26, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13596	4625
Chart No. 27, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13598	4627
Chart No. 28, Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure	13600	4629

	Original	Print
Chart No. 29, Dollars needed Annually by Panhandle for Operations and Maintenance	13602	4633
Chart No. 30, Dollars needed Annually by Panhandle for Taxes	13604	4637
Chart No. 31, Dollars needed Annually by Panhandle to return Capital to Investors when Gas Reserves are Exhausted	13606	4639
Chart No. 32, Dollars needed Annually by Panhandle for current Capital Requirements — Bonds	13608	4641
Chart No. 33, Dollars needed Annually by Panhandle for current Capital Requirements — Preferred Stock	13610	4643
Chart No. 34, Dollars needed Annually by Panhandle for current Capital Requirements — Common Stock	13612	4645
Chart No. 35, Dollars needed Annually by Panhandle for total current Capital Requirements — Total Invested Capital	13614	4647
Chart No. 36, Dollars needed Annually by Panhandle to provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13616	4649
Chart No. 37, Dollars needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors and restore Invested Capital when Gas Reserves are Exhausted	13618	4651

(k) In 1941 company sold privately to a group of insurance companies an issue of $22,000,000 bonds. Proceeds will be used chiefly for new construction in the company's program to double its original capacity and to extend its lines. Meanwhile, company has been considering a plan to refund $40,000,000 first 6's A, 1946, which are owned by its stockholders.

(l) Adjusted to reflect reduction of $1,000,000 in note indebtedness in 1939, and extension of maturity date to 1942.

(m) Does not include Common Stock subscribed in amount of $310,000.

* Data taken from an Exhibit prepared by Mr. Charles W. Knapp, Jr., for the Federal Power Commission in the Hope Natural Gas Co. hearings.

[fol. 13537] Determination of Economic Return Requirement For Panhandle Eastern Pipe Line Company.

By Paul B. Coffman

Statement Of Experience And Qualifications

1. Name, Address and Age

Paul B. Coffman, 222 Sylvania Place, Westfield, N. J., Age 40.

2. Education

Graduate of Ohio State University, 1923, with degree of Bachelor of Science; graduate of Harvard University Graduate School of Business Administration, 1926, with degree of Master of Business Administration.

3. Present Position

Vice President, in charge of Research and Valuation, and Director, of Standard & Poor's Corporation (recently

formed as a consolidation of Standard Statistics Company, Inc. and Poor's Publishing Company), a corporation engaged, among other things, in gathering, collating, analyzing and disseminating statistical and general information on all phases of business, industry and investments and offering professional, industrial consulting, valuation and research services.

4. Experience and Qualifications

Upon graduation in 1926 from Harvard University I became Professor of Economics and Accounting at the College of William and Mary, Williamsburg, Virginia. In September 1927, I returned to the Harvard Graduate School of Business Administration, where I joined the Faculty and became an assistant professor and tutor and remained until the end of 1936. The particular subjects I taught were accounting, corporate management and business policy.

While teaching at the Graduate School of Business Administration at Harvard University, I also served as consulting economist for a number of industrial and financial advisory corporations, including both Standard Statistics Company, Inc., with which I became associated in 1928, and Poor's Publishing Company, publisher of Poor's Manuals, with which I became associated in 1931, and which are the predecessor companies of the present Standard & Poor's Corporation. During 1931 and 1932 I served as Executive Vice President and General Manager of Poor's Publishing Company. Also, I was collaborator on several books of accounting and business policy and author of several articles.

Over a period of years I have been retained to make investigations upon a large number of diversified situations, many of which required that I present my analysis and testify as to my conclusions before the courts, the Internal Revenue Department, the Board of Tax Appeals, and several regulatory bodies, such as, the Civil Aeronautics Authority, State Public Utility Commissions and the Federal Power Commission.

[fol. 13538] Analysis Leading To Determination of Economic Return Requirement For Panhandle Eastern Pipe Line Company.

Synopsis Of History And Development Of Company.

History

Panhandle Eastern Pipe Line Co., (hereinafter sometimes referred to as Panhandle Eastern) was incorporated in Delaware, December 23, 1929, as the Interstate Pipe Line Co. and adopted its present title on May 9, 1930. Illinois Natural Gas Co., a wholly-owned subsidiary, was organized January 19, 1938 and in July, 1938, acquired from Panhandle Illinois Pipe Line Co. its facilities devoted exclusively to service of customers in Illinois. Main transmission facilities of the latter were conveyed in liquidation to the parent company.

Panhandle Eastern formerly owned the entire outstanding stock of Central Distributing Co., selling gas at retail in Kansas and Missouri, but disposed of such stock on January 25, 1941, by distributing it to stockholders as a dividend.

Corporate Background

Panhandle Eastern does a large wholesale business in natural gas. It purchases about half its requirements and produces the remainder. About 93% of total supply is sold to companies engaged in the distribution of natural gas for general purposes, and most of remaining 7% finds its way to industrial concerns.

The largest single customer is Michigan Consolidated Gas Company, which purchases about 40% of the total M. C. F. sold by Panhandle Eastern Pipe Line Co. and resells it in Detroit and Ann Arbor, Michigan, and environs. Natural gas is delivered to this customer through the pipeline system of Michigan Gas Transmission Corp. (a wholly-owned subsidiary of Columbia Gas & Electric Corp.).

Panhandle Eastern also sells gas to Michigan Gas Transmission Corp. for resale to certain distributing companies and municipalities in Indiana, more important of which include Northern Indiana Public Service Co., Kokomo Gas

and Fuel Co., Public Service Co. of Indiana, Indiana Gas Distribution Corp. and Central Indiana Gas Co. Such sales in M. C. F. to Michigan Gas Transmission Corp. amount to about 22% of Panhandle Eastern's total sales.

Company also sells Kentucky Natural Gas Corp. certain of its gas requirements.

Illinois Natural Gas Co. (wholly-owned subsidiary) sells natural gas purchased from company to certain distributing companies and industrial customers in Illinois, including Central Illinois Light Co., Illinois Iowa Power Co. and Central Illinois Public Service Co.

The more important distributing companies in Missouri obtaining natural gas from Panhandle Eastern are Missouri Power & Light Co., Citizens Gas Co. of Hannibal and Missouri Utilities Co.

[fol. 13539] Central Distributing Co. (former subsidiary) distributes gas purchased from company to about 4,200 customers in 29 communities in Kansas & Missouri.

It is estimated that about 696,000 gas customers are supplied directly and indirectly with gas from the Panhandle Eastern system, of whom about 430,000 are customers of Michigan Consolidated Gas Co.

Property

Leaseholds—

Panhandle Eastern owns or controls, subject to farm mortgages existing prior to acquisition thereof, gas rights on 49,417 acres of operated and 179,549 acres of unoperated land and a 50% working interest in 22,679 acres of operated and 6,017 acres of unoperated land, in the Panhandle of Texas, southwestern Kansas and Texas County, Okla., and in addition controls through gas purchase contracts approximately 76,896 acres of land in this territory. About half of the gas supply is obtained from wells heretofore drilled on certain of these leaseholds. The remainder is purchased from other producers. As of December 31, 1940, there were 135 wells owned, (including 46 in which Panhandle Eastern had only a 50% working interest) and 121 wells controlled by gas purchase contracts. The total connected open flow of these wells was 4,423,000 M.C.F.

Gas Reserves—

Ralph E. Davis, Inc., Engineers, in report on Panhandle Eastern's natural gas supply, stated in part: "The combined gas supply controlled by your company in the Amarillo and Hugoton fields is, in our judgment, adequate to supply its present markets and any reasonably anticipated increase in the gas requirements of said markets for a period of more than 25 years".

Transmission System—

Principal natural gas transmission system, which was placed in operation in 1932, is shown on the following map. Such system extends from the Amarillo gas field in Texas Panhandle and from the Hugton gas field in southwestern Kansas through Oklahoma, Kansas, Missouri and Illinois, to a point near Dana, Indiana, where connection is made with the transmission system of Michigan Gas Transmission Corp. Panhandle Eastern also operates, as a separate unit, a minor transmission system located in the general vicinity of Kansas City, Mo.

Transmission system embraces 2,374 miles of gathering, main and lateral lines (all sizes) and 12 compressor stations with gas driven compressor units having aggregate installed capacity of 80,100 hp.

In addition, meter stations, a dehydrating plant, a natural gasoline extraction plant, and other equipment and property used in the operation and maintenance of a high-pressure gas transmission system, are owned directly or by the Illinois Natural Gas Co.

Acquisition of the Michigan Gas Transmission Corp. facilities is under consideration and, if consummated, would [fol. 13540] give Panhandle Eastern ownership of a complete natural gas transmission system from the Texas and Kansas fields to Detroit, Mich.

Contracts

Michigan Consolidated Gas Co. (formerly Detroit City Gas Co.)

Contract dated August 31, 1935, between Panhandle Eastern and Detroit City Gas Co. (now Michigan Consolidated

Gas Co.) provides for sale of natural gas for resale in Detroit, Michigan, for a term of 15 years from January 1, 1937, and thereafter until canceled by either party on 18 months' notice.

The maximum amount of gas which Panhandle Eastern is obligated to deliver in any one day, as provided in amendment dated June 29, 1940 is 125,000,000 cu. ft. Under terms of amendment dated September 29, 1939, which provided, among other things, that the minimum obligation of Michigan Consolidated Gas Co. to take and pay for gas was to increase proportionately with any increase in company's maximum obligation to deliver gas, Michigan company is presently obligated to take and pay for 190,125,000 therms of gas per year. (One therm represents an amount of gas having a heating value of 100,000 British thermal units). Deliveries under this contract were begun July 9, 1936.

In the event that an adequate supply of natural gas sufficient to meet requirements of Michigan Consolidated Gas Co., is developed by parties other than Panhandle Eastern and made available at lower rates, company must meet such lower rates within six months after notice from Michigan Consolidated Gas Co. Contract may be terminated for breach of this or certain other provisions.

The following (relating to rates payable under this contract) is taken from the report of Stone & Webster Engineering Corp. (contained in Registration Statement covering Detroit City Gas Co. bonds), dated Jan. 30, 1937.

Panhandle Eastern undertakes to furnish and Michigan Consolidated Gas Co. agrees to purchase gas to be used for residential, commercial and industrial customers at a price of 38¢ per month per therm of maximum daily demand, as defined in contract, plus 1.5¢ per therm as a commodity charge for gas delivered.

Michigan Consolidated Gas Co. will sell gas to its customers on the basis of "Detroit Gas Units" or "DGU" equivalent in heating value to 1,000 cu. ft. of gas of 530 B. t. u. Converting the therms to DGU it appears that Michigan Consolidated Gas Co. will pay for natural gas with a heating value of 1,014 B. t. u. $24.17 per year per DGU of maximum demand, as defined in contract, plus a commodity

charge of 7.95¢ per DGU. Under this form of rate, the cost of gas varies with the load factor. Gas purchased at an 80% load factor would cost Michigan Consolidated Gas Co. 16.20¢ per DGU, while gas purchased at a 20% load factor would cost 41.0¢ per DGU. This illustrates the importance to Michigan Consolidated Gas Co. of maintaining control over the maximum demands on Panhandle Eastern and obtaining as favorable a load factor as possible. [fol. 13541] The cost of natural gas purchased for distribution to house heating customers depends upon a formula set forth in the contract, taking into account the difference between the monthly averages of prevailing temperatures and 65 degrees F., and an assumed consumption per customer per degree of temperature difference. We estimate that the Michigan Consolidated Gas Co. will pay between 21¢ and 22¢ per DGU for house heating gas.

Michigan Gas Transmission Corp.

Panhandle Eastern has a number of contracts with Michigan Gas Transmission Corp. The most important of these cover the terms, conditions and provisions under which the latter company receives, transmits and delivers gas to Michigan Consolidated Gas Co. Another contract covers the terms under which the Transmission Company receives, transmits and delivers gas to certain special industrial customers in Indiana. Another contract covers the terms under which the Transmission Company receives, transmits and delivers gas to Public Service Co. of Indiana, Northern Indiana Public Service Co. and Kokomo Gas and Fuel Co.

Kentucky Natural Gas Corp.

In July, 1938, Panhandle Eastern entered into a fifteen-year contract with Kentucky Natural Gas Corp. providing for a minimum firm delivery of 2,500,000 cu. ft. of gas daily during the first year and increasing thereafter to a firm daily delivery of 10,000,000 cu. ft. in the sixth year and thereafter. In addition to firm deliveries agreement also provides for sale of additional gas on an interruptible basis. Initial delivery under this contract was made September 1, 1938.

Phillips Petroleum Co.

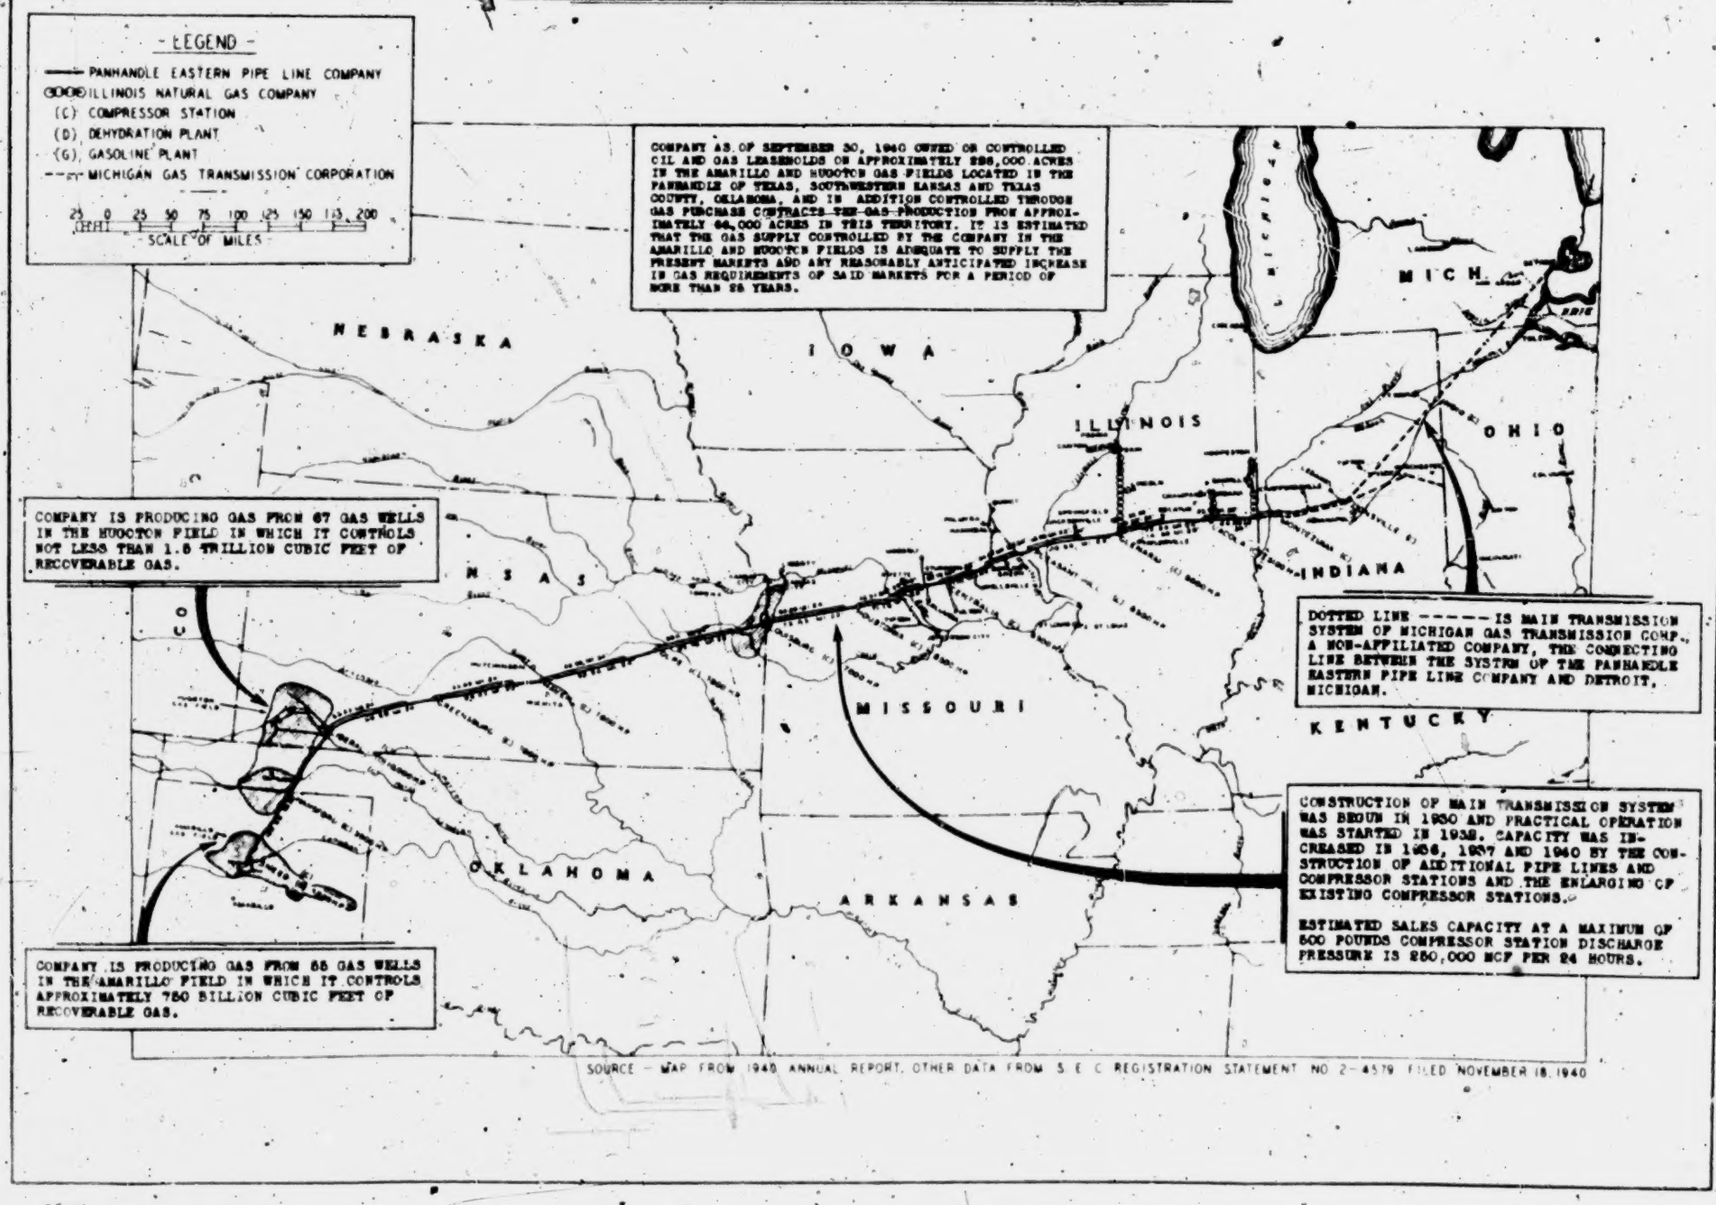
Panhandle Eastern has a contract with Phillips Petroleum Company under which it agrees to sell and deliver and Phillips Petroleum Co. agrees to purchase and receive all merchantable natural gasoline that may be produced, manufactured and saved by company at its natural gasoline plant located near Liberal, Kansas. Contract became effective October 1, 1940 and continues for an indefinite period thereafter unless cancelled by either party upon 12 months' notice.

Acquisition of Contract by Assignment

During 1939, Panhandle Eastern acquired by assignment from Michigan Gas Transmission Corp. its contract with Michigan Consolidated Gas Co. covering the sale and delivery of gas to that company for resale in the City of Ann Arbor, Michigan.

- CHART NO. 1 -

MAIN TRANSMISSION SYSTEM OF PANHANDLE EASTERN PIPE LINE CO. & SUBSIDIARY



SOURCE - MAP FROM 1940 ANNUAL REPORT, OTHER DATA FROM S. E. C. REGISTRATION STATEMENT NO. 2-4579 FILED NOVEMBER 18, 1940

[Fol. 1543] Approach To Determination of Fair Return and My Point of View

On September 3, 1941, the Panhandle Eastern Pipe Line Company retained Standard & Poor's Corporation, through me, to make a study from which I could determine the investors' appraisal of the risks of capital in various divisions of the public utility field and the relative appraisal of risks of natural gas pipe line companies. A summary of such analyses is presented in Volume I, entitled, "Summary of Analyses," which is supported by Volume II, containing statistical data, both of which volumes are presented as supplements to this study.

Having completed the above analyses, which are purely factual, I was asked to explore further statistical data which was directly related to Panhandle Eastern Pipe Line Company and which would be helpful to the Federal Power Commission in determining a fair return of compensation for that company.

Some time before receiving this assignment, I had undertaken a study for the Pennsylvania Power & Light Company, the results of which indicated that the management of that company would need a certain irreducible minimum of compensation return to discharge properly its public duties and maintain its credit position. Admittedly, this aproach was somewhat different from those heretofore used, but I felt I was following precisely the factors underlying such determination of a fair rate of return by the Pennsylvania Supreme Court in the Solar Electric Case, 137 Pa. Sup. Court Rep. 325, wherein it was stated:

"The courts have held that the return should be reasonably sufficient to assure confidence in the financial soundness of the utility, and should be adequate, under efficient and economical management, to pay all expenses of operation, provide for depreciation, payment of interest and reasonable dividends, and for a reasonable amount to be applied to a surplus account, thus insuring the maintenance of credit and enable it to raise money necessary for proper discharge of its public duties: Bluefield Water Works & Improve. Co. vs. P. S. C., 262 U. S. 679, 692; United Rwy. & Elec. Co. vs. West, supra."

The above study was presented before the Public Utility Commission of Pennsylvania in the latter part of September, 1941, and from my experience in testifying before the Commission I was led to believe that the data I had assembled gave the Commissioner additional facts upon which to determine a fair return for that company. I was retained by the Panhandle Eastern Pipe Line Company to make a similar study for it.

The problem of "Rate of Return" has always been one of the most important, as well as one of the most subtle and complex issues with which the Commissions and courts have had to cope. Over a period of years many cases have been tried and many rulings have been made upon the subject. In most decisions, however, in spite of its importance, it appeared to me that the subject of "rate of return" has been subordinated to such other rate making elements as "valuation," "going concern value," and "depreciation." As a part of my preparation of this study, I reviewed generally the more important Commission rulings and court decisions, not as an attorney might read them, nor with the idea of ascertaining the final particular decision as to rate, but rather with the idea of discovering what such bodies believed to be the underlying factors which should be considered in any rate of return study. Over the years, a rather considerable body of discussion has been built upon this general subject, and it is possible to discover from the decisions a number of basic factors which courts and Commissions have at various times asserted that they had "considered" in arriving at the rates of return finally allowed or adopted.

[fol. 13544]

Upon a review of such factors, I concur in the opinion that the proper rate of return (percentage) or the rate (compensation) is a flexible concept and not a static rule. Moreover, that what is termed proper necessitates the exercise of "enlightened judgment." Current conditions carry greater weight but general conditions affecting all business should be considered. Also, the rate should be sufficient to assure confidence, in the financial soundness of the utility, to maintain its credit and to attract the required capital. The propriety of the allowed return depends largely upon the circumstances, the locality, and the risks of the utility enterprise. Furthermore, the return should be equal

to that generally being made at the same time and in the same general region on investments of other enterprises that have corresponding risks. The historical cost of money to the utility and the current cost of money must be considered, as well as the utility's capital structure, financial history and past operations. The return should accomplish, among other things, due recognition of efficiency or lack of efficiency in management. In addition, the future prospects of the utility, its taxes and development, the potential stimulation of reduced rates and the character of service, should be considered.

From my experience, I have gained the impression that although these factors have been considered in one form or another in the various rate of return cases which have come before the Commissions and the courts, experts preparing evidence on the subject have generally fallen into two classes, namely, those who made extensive studies to establish the figures from which a proper rate base could be established, and those who prepared evidence from which a fair rate of return could be established. However, as I have considered the various Commission and court decisions I have felt that one further type of analysis might contribute much to a study of rate of return; that is, [an analysis to determine the irreducible minimum of dollar income or gross revenue needed by the management of a particular utility company to discharge properly its service obligation to the public and at the same time maintain its credit position. This study is in essence an examination of economically required return, as such, rather than of a "rate" of return to be applied to some selected "rate base."]

In the following analysis I have attempted to provide such information for the Panhandle Eastern Pipe Line Company.

In last analysis, as I understand the problem, the issue really comes down to such determination for when a fair rate base and a reasonable rate of return are multiplied together the resulting figure is presumed to be the revenue [fol. 13545] sufficient to enable the management to carry out the function mentioned above. If this is an accurate statement of the situation, and I believe that it is, it oe

curred to me that one might well start a study of the problem of return by determining what the money income requirements were in the first place. Such final figure could then be used as a check against the application of a fair rate of return to a fair rate base to see whether in last analysis those two figures did provide the utility with the money income that was necessary to render efficient service to the public and at the same time maintain its credit position.

So far as I know, the decisions rendered in the Bluefield Water Works and Improvement Co. vs. Public Service Commission of West Virginia, 262 U. S. 679, and United Railways vs. West, 280 U. S. 234, still represent the law so far as rate of return is concerned. The general rule, as stated in the Bluefield case, was as follows:

"What annual rate will constitute just compensation depends upon circumstances and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevent facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and and in the same general part of the country on investments in other business undertakings which are attended by corresponding risk and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally."

Following the factors mentioned above, and particularly those underlying a study of rate of return as outlined in the Bluefield Water Works and Improvement Company vs. Public Service Commission of West Virginia, I gave attention to such topics as type of service rendered; the territory served, the efficiency of management, current conditions of the particular business and general business, the financial

structure, the circumstances, locality and risks of the particular utility company, historical and current costs of money, future prospects of the utility, its taxes and development. Charts showing data on these topics are presented in the following pages, in about the order mentioned. All the factual data presented on the various exhibits were obtained from the annual reports of the Panhandle Eastern Pipe Line Company, and the companies with which data on it were compared. Gas industry data has been taken from the records of the Bureau of Mines, Standard Corporation Records, Commercial & Financial Chronicle and other sources, all of which are available to the public and are recognized as reasonably reliable sources of information for the data taken therefrom.

My study, following the approach outlined above, leads to the conclusion that the Panhandle Eastern Pipe Line Company must have as an irreducible minimum annual gross revenue of $15,459,545 assuming that the present preferred stock is refinanced, or $15,520,857 assuming no change in the present capital structure, such sums to be available to meet operating expenses, taxes, current capital [fol. 13546] requirements and provide a reserve to restore invested capital after the gas reserves of the company are exhausted.

In my analysis, I did not attempt to determine a rate base or the specific rate of return, but rather attempted, as already explained, to determine that amount of earnings (return) which would be considered the irreducible minimum required by the management to maintain the efficiency of its operations, its credit position and discharge its public obligations. This required the determination of the amount of return needed rather than the return which the company might be entitled to earn. There is no conflict between these two points of view—a public utility appears "entitled" to earn only the return that it "needs" to maintain its credit position. The determination of the rate base was properly left to the Commission.

Admittedly, or at least so far as I am apprised, this approach is somewhat different from any heretofore used, yet, as I have already stated, I believe it follows the factors underlying a study of rate of return as outlined in the

various Commission and court opinions and it avoids certain difficulties that have arisen in prior studies where, so far as I understand it, the rate base and the rate of return were each treated as separate entities, when as a matter of fact, the two are interrelated when one comes face to face with the issue of what earnings a particular utility is to be allowed.

With this preliminary explanation of the approach I have followed in this particular study, I present a series of charts in the following pages which graphically protray my thesis and the conclusions drawn therefrom.

[fol. 13547] Growth of Natural Gas Industry in U. S. A. 1906-1940

In Chart No. 2, captioned "Growth of Natural Gas Industry in U. S. A., 1906-1940," the solid blue line represents the natural gas production in terms of billion M. C. F., and the light grey line represents domestic and commercial customers in terms of million customers, for the period mentioned.

Interpreting these lines, it can be seen that the natural gas industry for the country as a whole, in terms of production and domestic and commercial customers, enjoyed a very modest growth from 1906 to 1920. From 1921, however, there was a setback in the trend because of the post war depression, but this was soon over and from 1922 to 1930 there was a much sharper increase in production and number of domestic and commercial customers, except that the number of the latter increased considerably more rapidly from 1928 than it did in any of the years prior thereto.

Natural gas production fell off in 1931 and 1932 and did not begin to recover again until 1933, when it showed a substantial uptrend again until 1937. The number of commercial and domestic customers continued to show an increase after 1931 through 1939, although this particular growth trend was not as sharp as that recorded in the period 1928-1930, both inclusive.

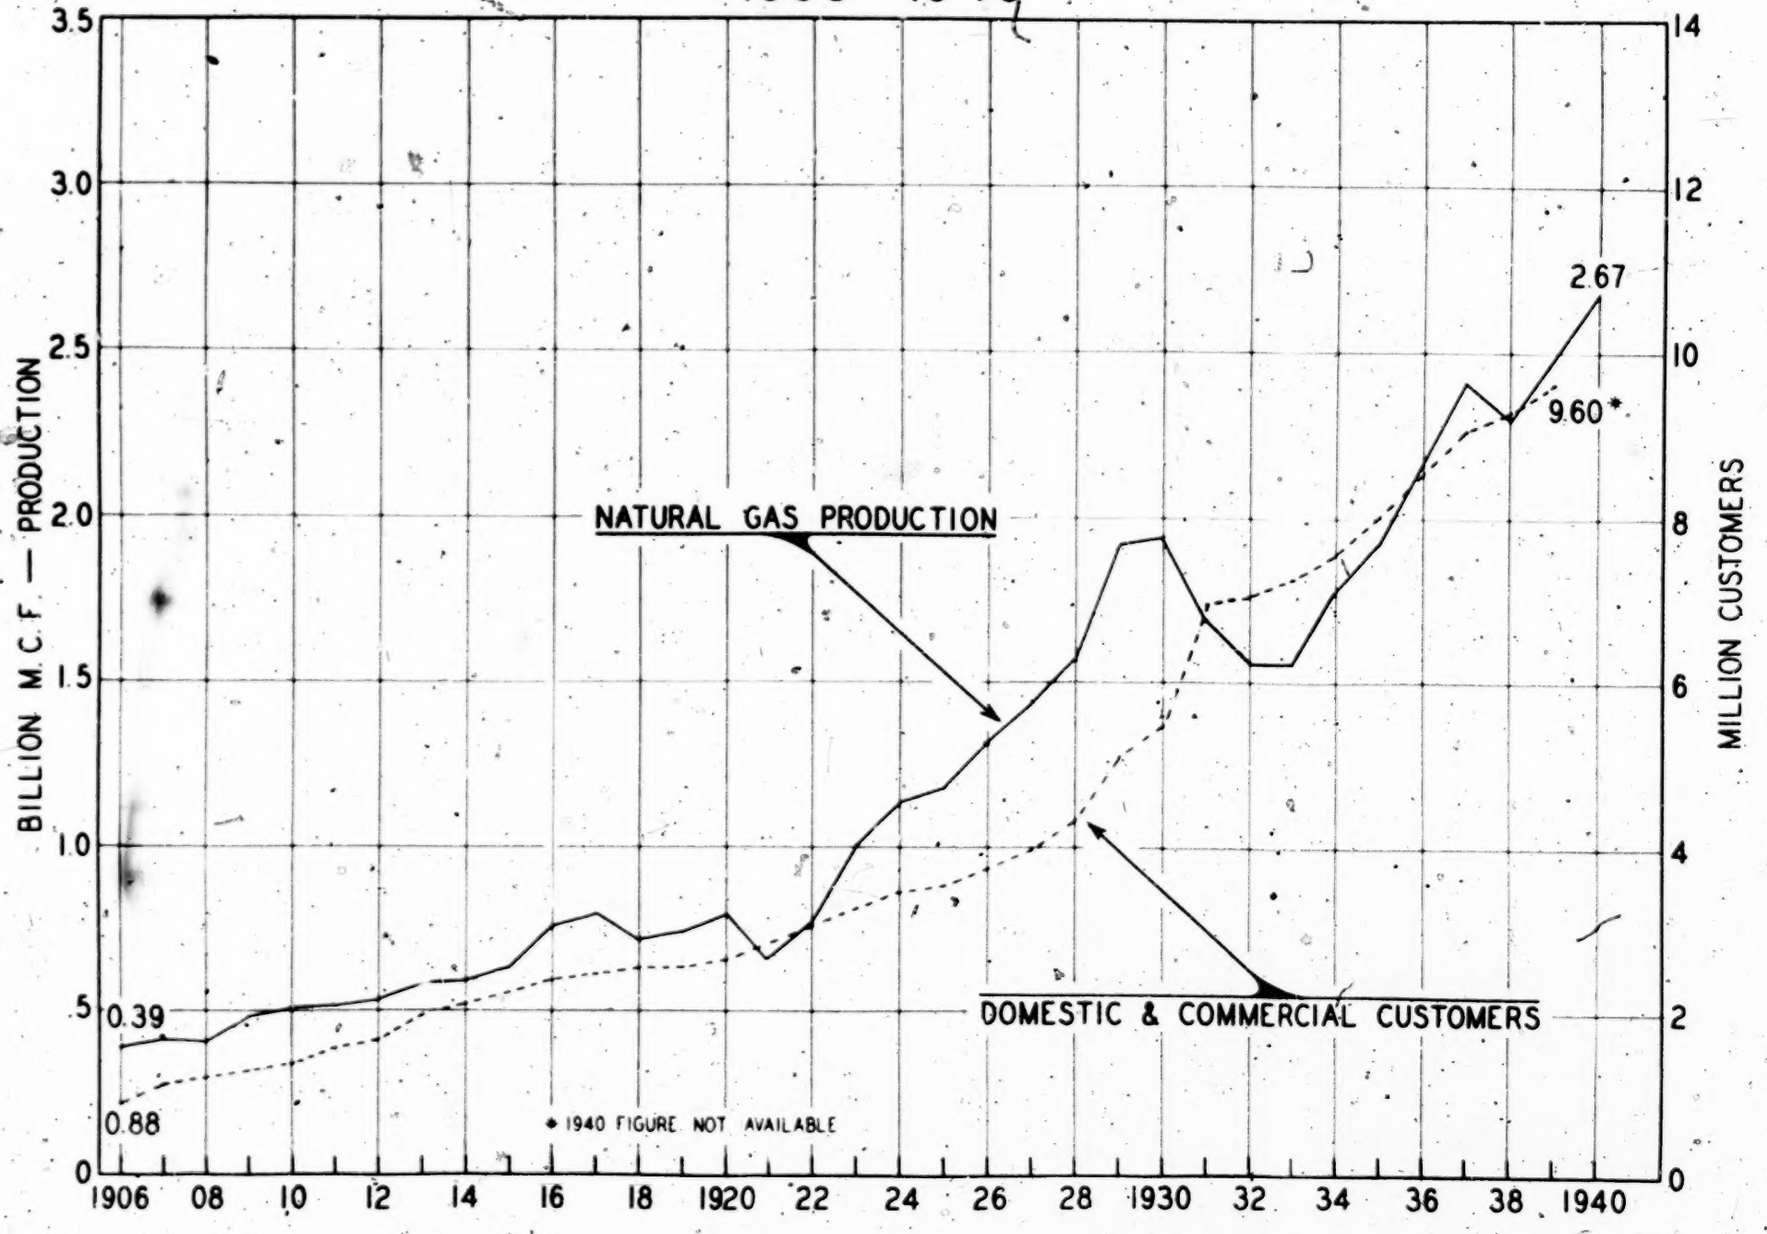
The production of natural gas fell off in 1938, but showed recovery in 1939 and then continued its sharp uptrend.

Actually, according to Moody's Public Utility Manual, 1941, Page a 42, the number of domestic and commercial customers increased from 884,018 in 1906 to 9,603,000 in 1939 (1940 figures were not available at the time this report was written) and according to U. S. Bureau of Mines—Minerals Yearbook: 1937, p. 1062; and 1941, p. 1030) natural gas production increased from 388,843,000 M. C. F. in 1906 to 2,672,000,000 in 1940.

It is evident from the accompanying chart that natural gas production is subject to cyclical fluctuations in business. This is particularly noted on the declines that were shown in production in 1921, 1931, 1932, 1933 and in 1938, and this factor must be considered in any study that is made of the natural gas industry.

- CHART NO. 2 -

GROWTH OF NATURAL GAS INDUSTRY IN U. S. A.
1906 – 1940



[fol. 13549] Consumption of Natural Gas in U. S. A.

1919-1940

In Chart No. 3, captioned "Consumption of Natural Gas in U. S. A., 1919-1940," the consumption according to usage is shown in the left hand box and consumption of natural gas vs. industrial production in relatives 1935-1939 equal 100 is shown in the right hand box.

As can be seen, consumption is shown as to its principal uses, namely, domestic and commercial, miscellaneous industrial, field use and carbon black. All of these divisions, if one follows the bands carefully, indicate that they are subject to fluctuations in general business. Moreover, it is clear that the greatest growth from 1919 to 1940 was in the miscellaneous industrial and field use classifications.

From 1919 to 1940 domestic and commercial increased from 255,743,000 M. C. F. to 574,000,000 M. C. F., miscellaneous industrial increased from 270,490,000 M. C. F. to 1,024,010,000 M. C. F., field use increased from 169,787,000 M. C. F. to 700,000,000, and carbon black increased from 49,896,000 M. C. F. to 369,000,000 M. C. F. The grand total therefore increased from 745,916,000 M. C. F. to 2,667,010,000 M. C. F.

In the right hand box, the solid brown line represents the Federal Reserve Board Index of Industrial Production in relatives 1935-1939 equal 100, the [sold] green line represents the total consumption of natural gas in relatives 1935-1939 equal 100, and the solid green line represents the consumption of natural gas (excluding field use and carbon black) in relatives of 1935-1939 equal 100.

The lines shown in the right hand box indicated that the trend of consumption of natural gas was the same as the Federal Reserve Board Index of Industrial Production in the period 1919 through 1929, although the figures were on different levels. After the 1931-1932 depression, however, all three lines are very close together. The chart indicates that the Federal Reserve Board Index of Industrial Production is estimated for the present year at 155, which is substantially higher than any level reached in the history to this time and would indicate that so long as the arma-

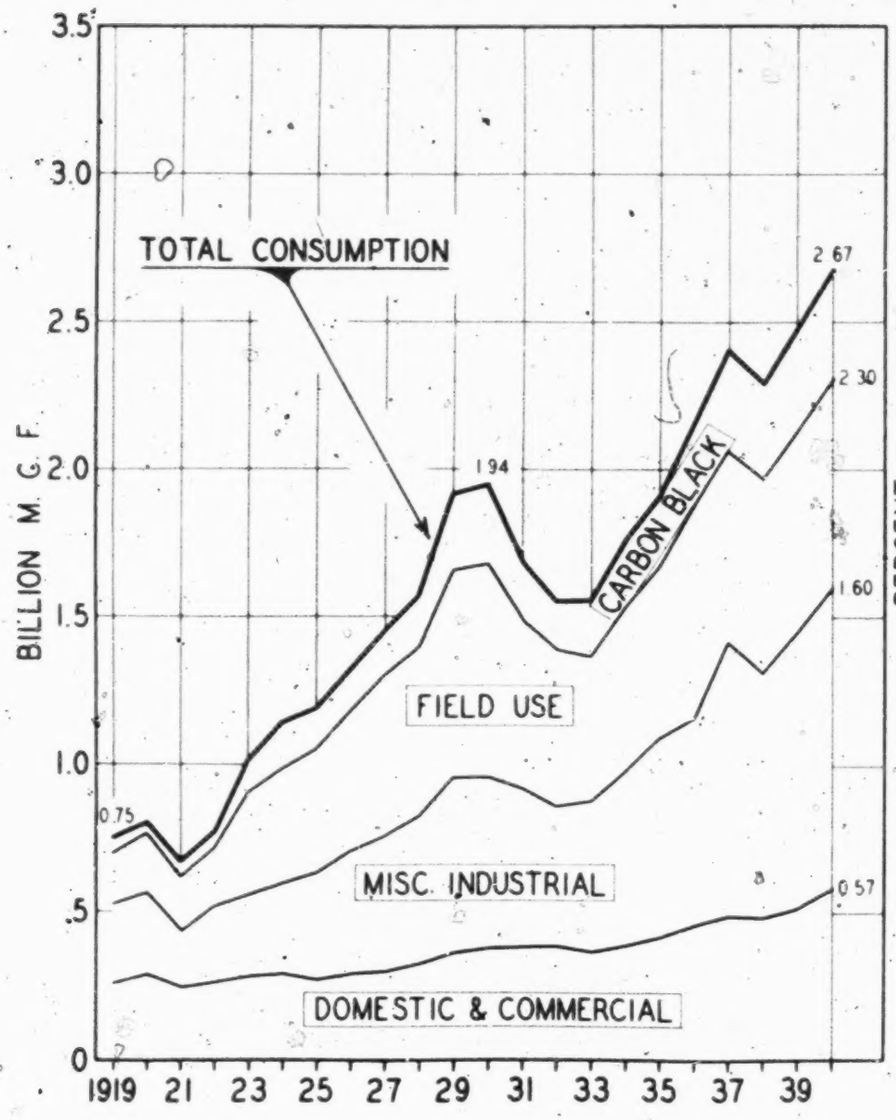
ment boom continues the natural gas consumption will continue to show a substantial uptrend following the general trend of business.

Detailed statistics on this graph are shown in the Appendix on the sheet marked "Table for Chart No. 3."

- CHART NO. 3 -

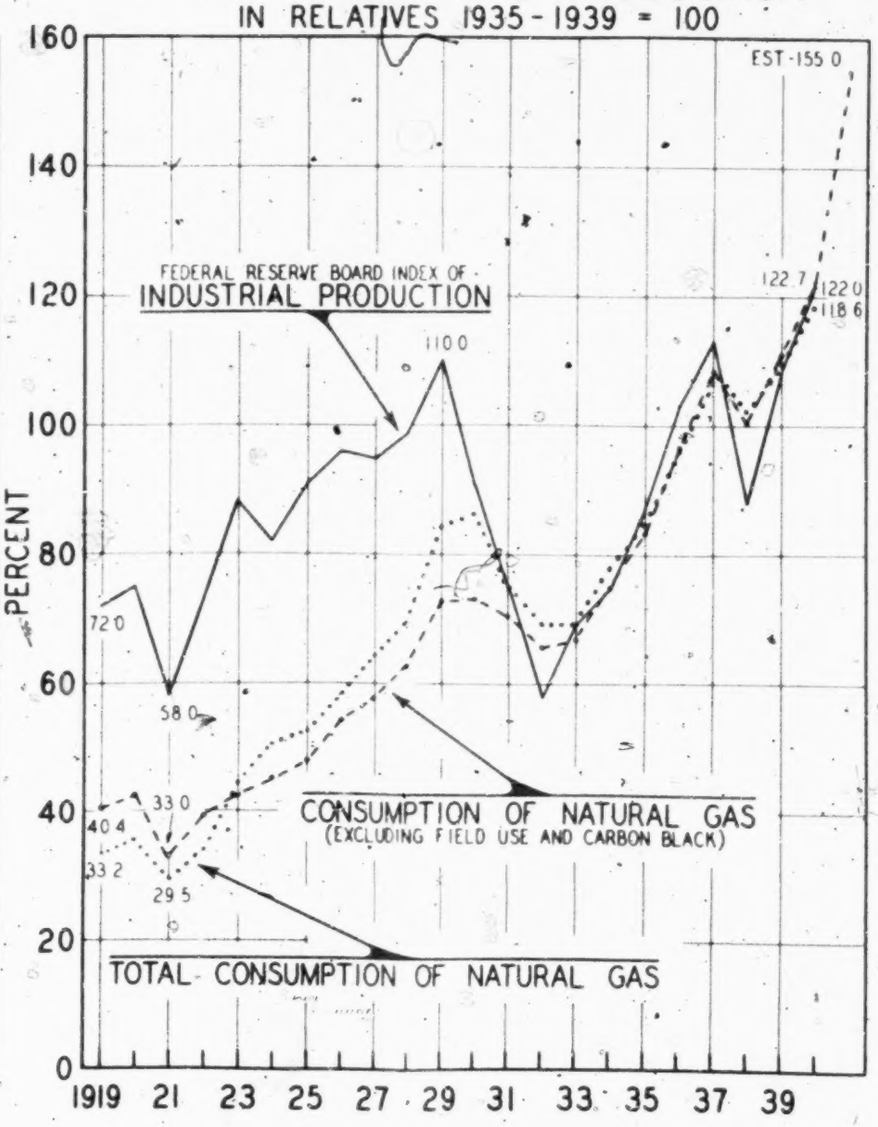
CONSUMPTION OF NATURAL GAS IN U. S. A. 1919 - 1940

CONSUMPTION ACCORDING TO USEAGE



CONSUMPTION OF NATURAL GAS — vs — INDUSTRIAL PRODUCTION

IN RELATIVES 1935 - 1939 = 100



[fol. 13551] Revenue From Natural Gas Consumed in U. S. A. 1919-1940.

In Chart No. 4, captioned "Revenue from Natural Gas Consumed in U. S. A., 1919-1940," the total revenue according to usage at points of consumption is shown in the left hand box, and the average value per M. C. F. is shown in the right hand box. The figures in the left hand box are again broken down as to domestic and commercial, miscellaneous industrial, field use and carbon black. The figures on the latter two items, however, were not available for 1940, and no figures were available on the breakdown basis for the years 1919-1921, both inclusive.

The left hand box indicates the tremendous growth factor in the period 1921-1940, both inclusive. Domestic and commercial increased from $110,337,000 to $387,604,000, miscellaneous industrial from $40,558,000, to $155,754,000 in 1939, field use from $21,649,000 in 1921 to $28,610,000 in 1939 and carbon black increased from $2,073,000 to $3,263,000 in 1939. The total therefore increased from $160,888,000 in 1919 to $590,626,000 in 1940.

Dividing the M. C. F. consumption figures as shown in Chart No. 3 by the total revenue according to usage, as shown in this chart, the average value per M. C. F. as represented by the green line is determined. It will be noted that whenever industrial production and gas production declined because of fluctuations in the business cycle, the average value per M. C. F. went up. This is naturally to be expected. The result is that there was a tremendous rise in 1920 and 1921, again in 1930, 1931 and 1932, but no noticeable change took place in 1937 and 1938 although there was a recession in business in these two years.

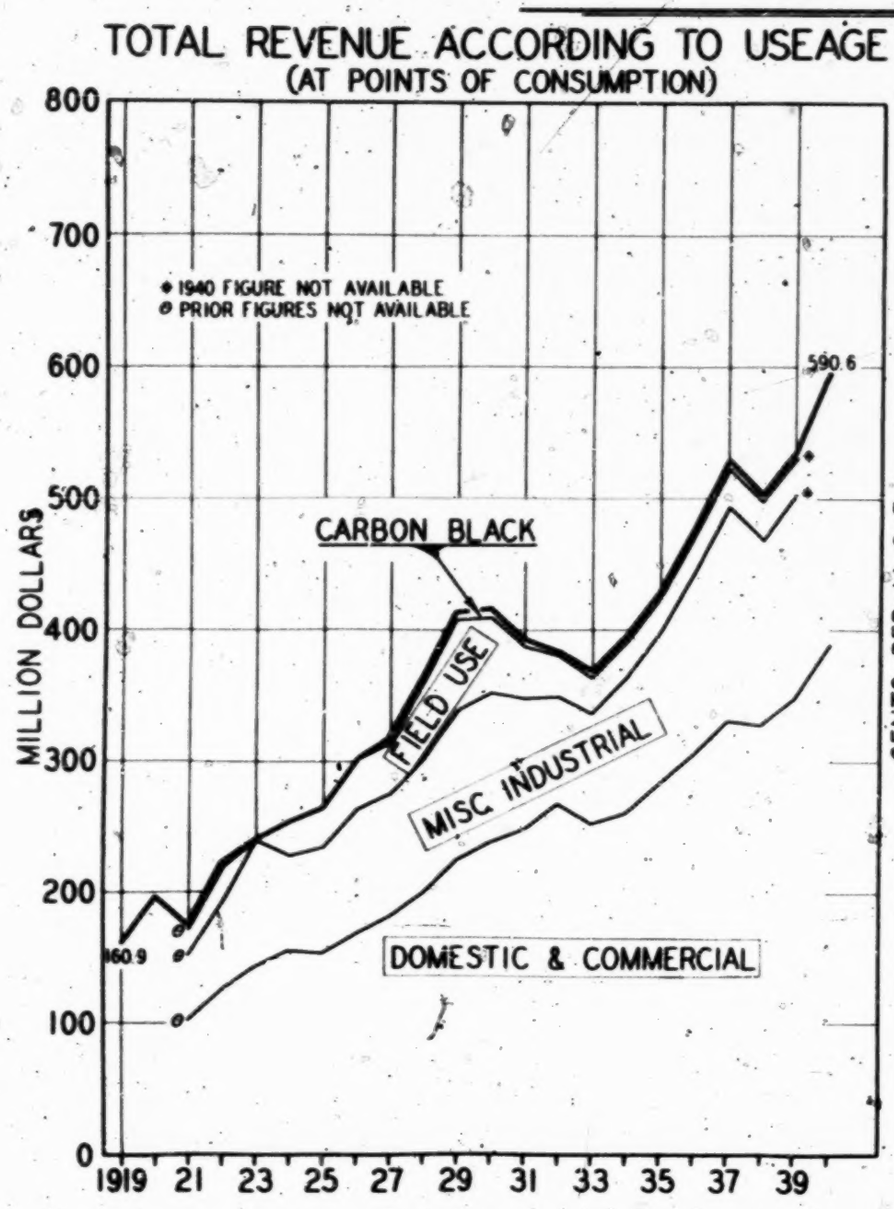
The average value per M. C. F. fluctuated in the period 1919-1939, both inclusive, from 21.6¢ per M. C. F. which compared with the low for the period of 21.4¢ per M. C. F. in 1930, and the high of 29.1¢ per M. C. F. in 1932, and 22.1¢ per M. C. F. in 1940.

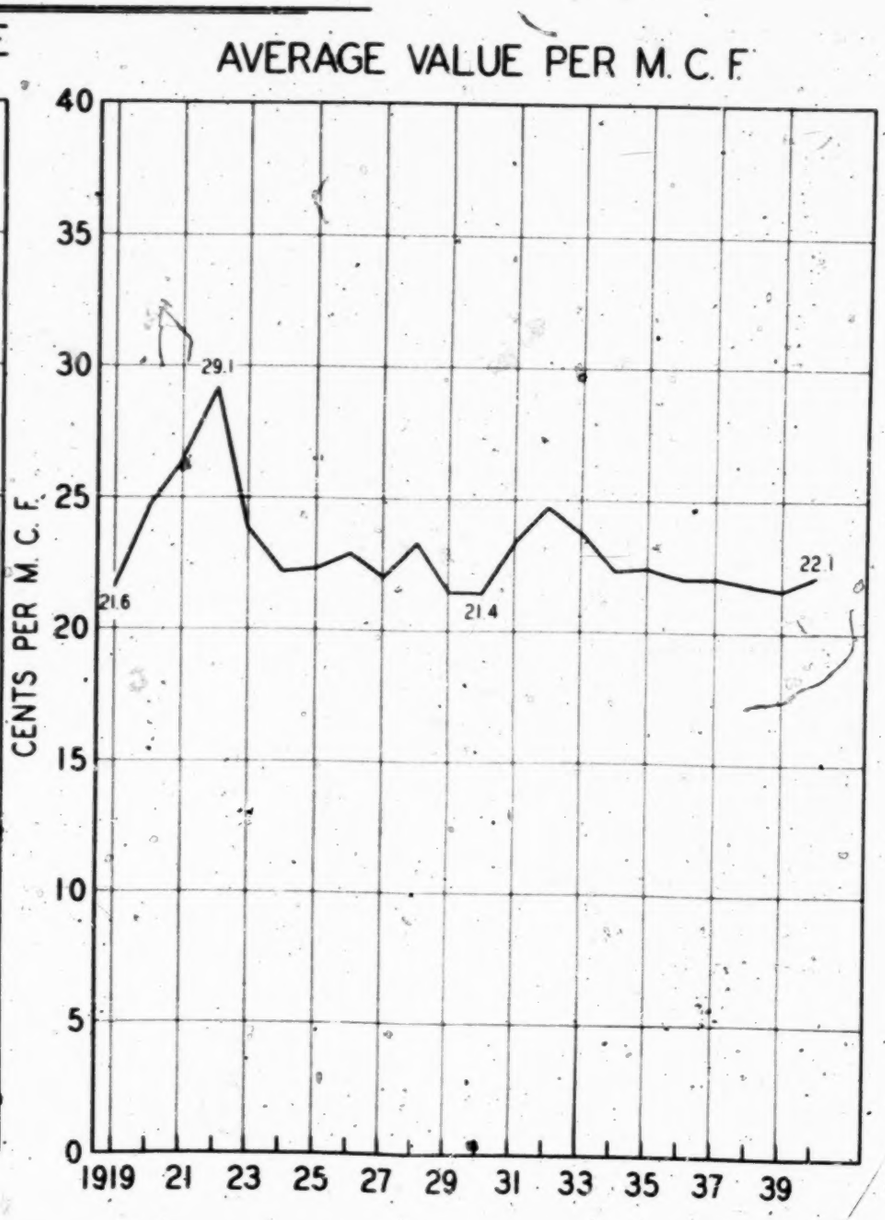
Data shown in the right hand box would indicate that the supply and demand for natural gas in the U. S. A. was such as to be farily well balanced, with the result that there were no striking variations in price except in the 1920-1921 and 1930-1932 periods, which were accounted for by depressed business conditions.

EXHIBIT 65

-CHART NO. 4-

REVENUE FROM NATURAL GAS CONSUMED IN U. S. A. 1919 – 1940





[fol. 13553] Average Revenue Per M. C. F. 1929-1940

In Chart No. 5, captioned, "Average Revenue Per M. C. F., 1929-1940," the average industry revenue from natural gas consumed in the U. S. A., at point of consumption is shown in the left hand box, and the average revenue of Panhandle Eastern Pipe Line Company vs. industry is shown in the right hand box.

The data in the left hand box relate again to the various types of consumption, namely, domestic, commercial, miscellaneous industrial, field use and carbon black. All such figures are presented in terms of cents per M. C. F.

From 1929 to 1939, both inclusive, miscellaneous industrial showed a decline from 19.7¢ to 16.6¢ per M. C. F., field use from 9.7¢ to 4.2¢ per M. C. F. and carbon black from 1.9¢ to 0.9¢ per M. C. F. Domestic and commercial, on the other hand, showed an increase in the period 1930-1932, both inclusive, and then only minor declines from 74.8¢ and 50.4¢ per M. C. F. respectively in 1932 to 73.0¢ and 49.2¢ per M. C. F. respectively in 1940.

In the right hand box, the figures are presented for the total industry, excluding field use and carbon black, at the point of consumption, as represented by the green line, and rose from 35.7¢ per M. C. F. in 1929 to 40.7¢ per M. C. F. in 1932, and declined to 34.7¢ per M. C. F. in 1939. Data on the Panhandle Eastern Pipe Line Company covering the average wholesale rate, as represented by the red line, showed an increase from 21.1¢ per M. C. F. in 1934 to 23.4¢ per M. C. F. in 1940. No figures on the company were available prior to 1934 and the figures on the industry were not available for 1940.

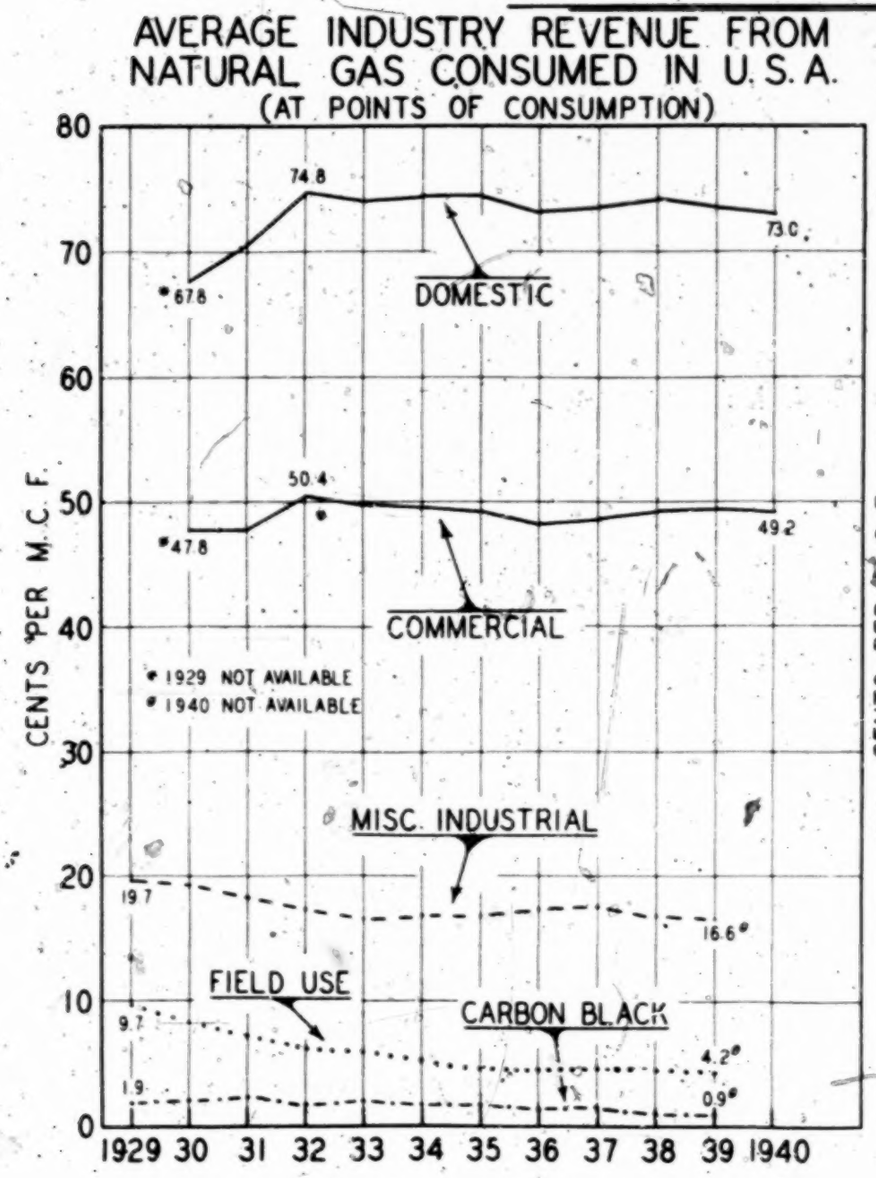
It must be remembered that, in comparing Panhandle Eastern Pipe Line Company figures with total industry figures, one is making a comparison of a wholesale price with a retail price.

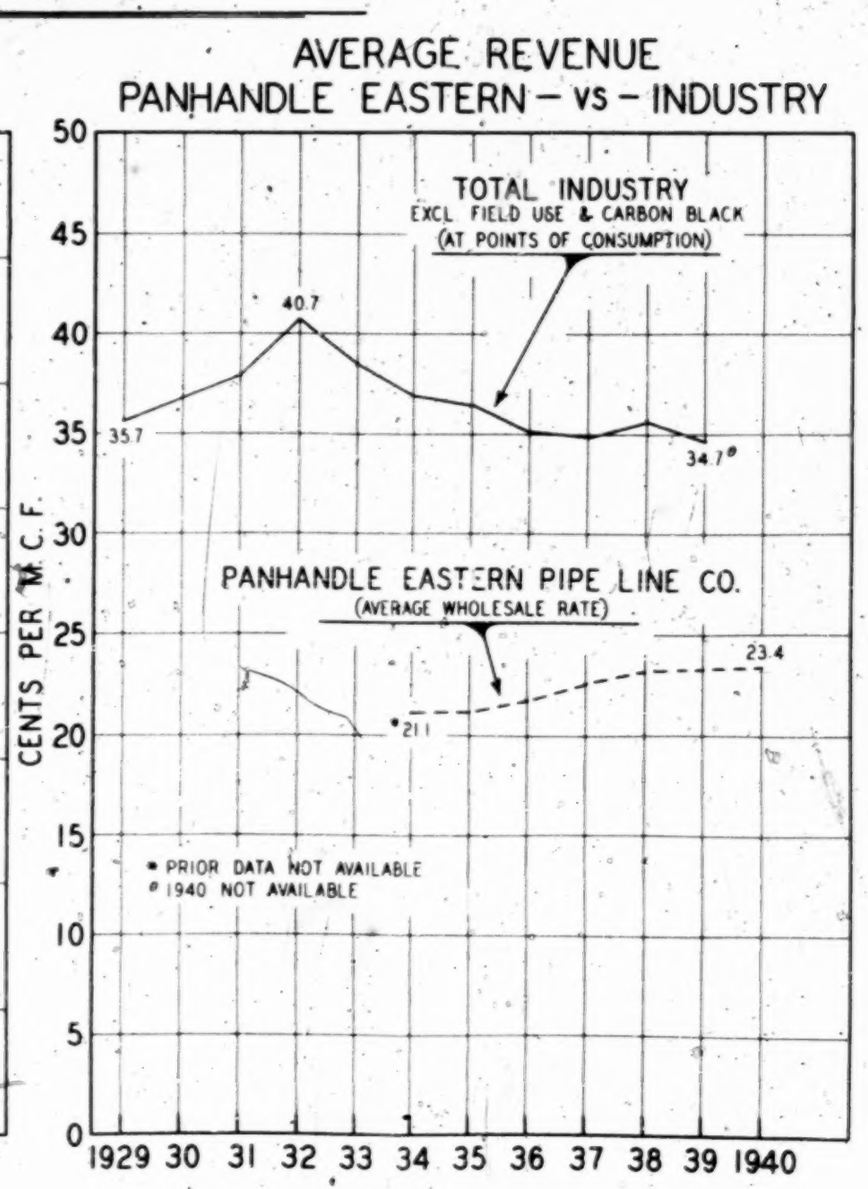
The increases in the Panhandle Eastern Pipe Line Company figures from 1934 to 1940 are principally explained by the fact that the company in this period was growing rather rapidly, as domestic and commercial business, which is shown in the left hand side of the chart, carried higher rates than did the industrial classification.

EXHIBIT 65

- CHART NO. 5 -

AVERAGE REVENUE PER M. C. F.
1929 - 1940





[fol. 13555] Panhandle Sales By States vs. Industry Consumption of Natural Gas—1934-1940

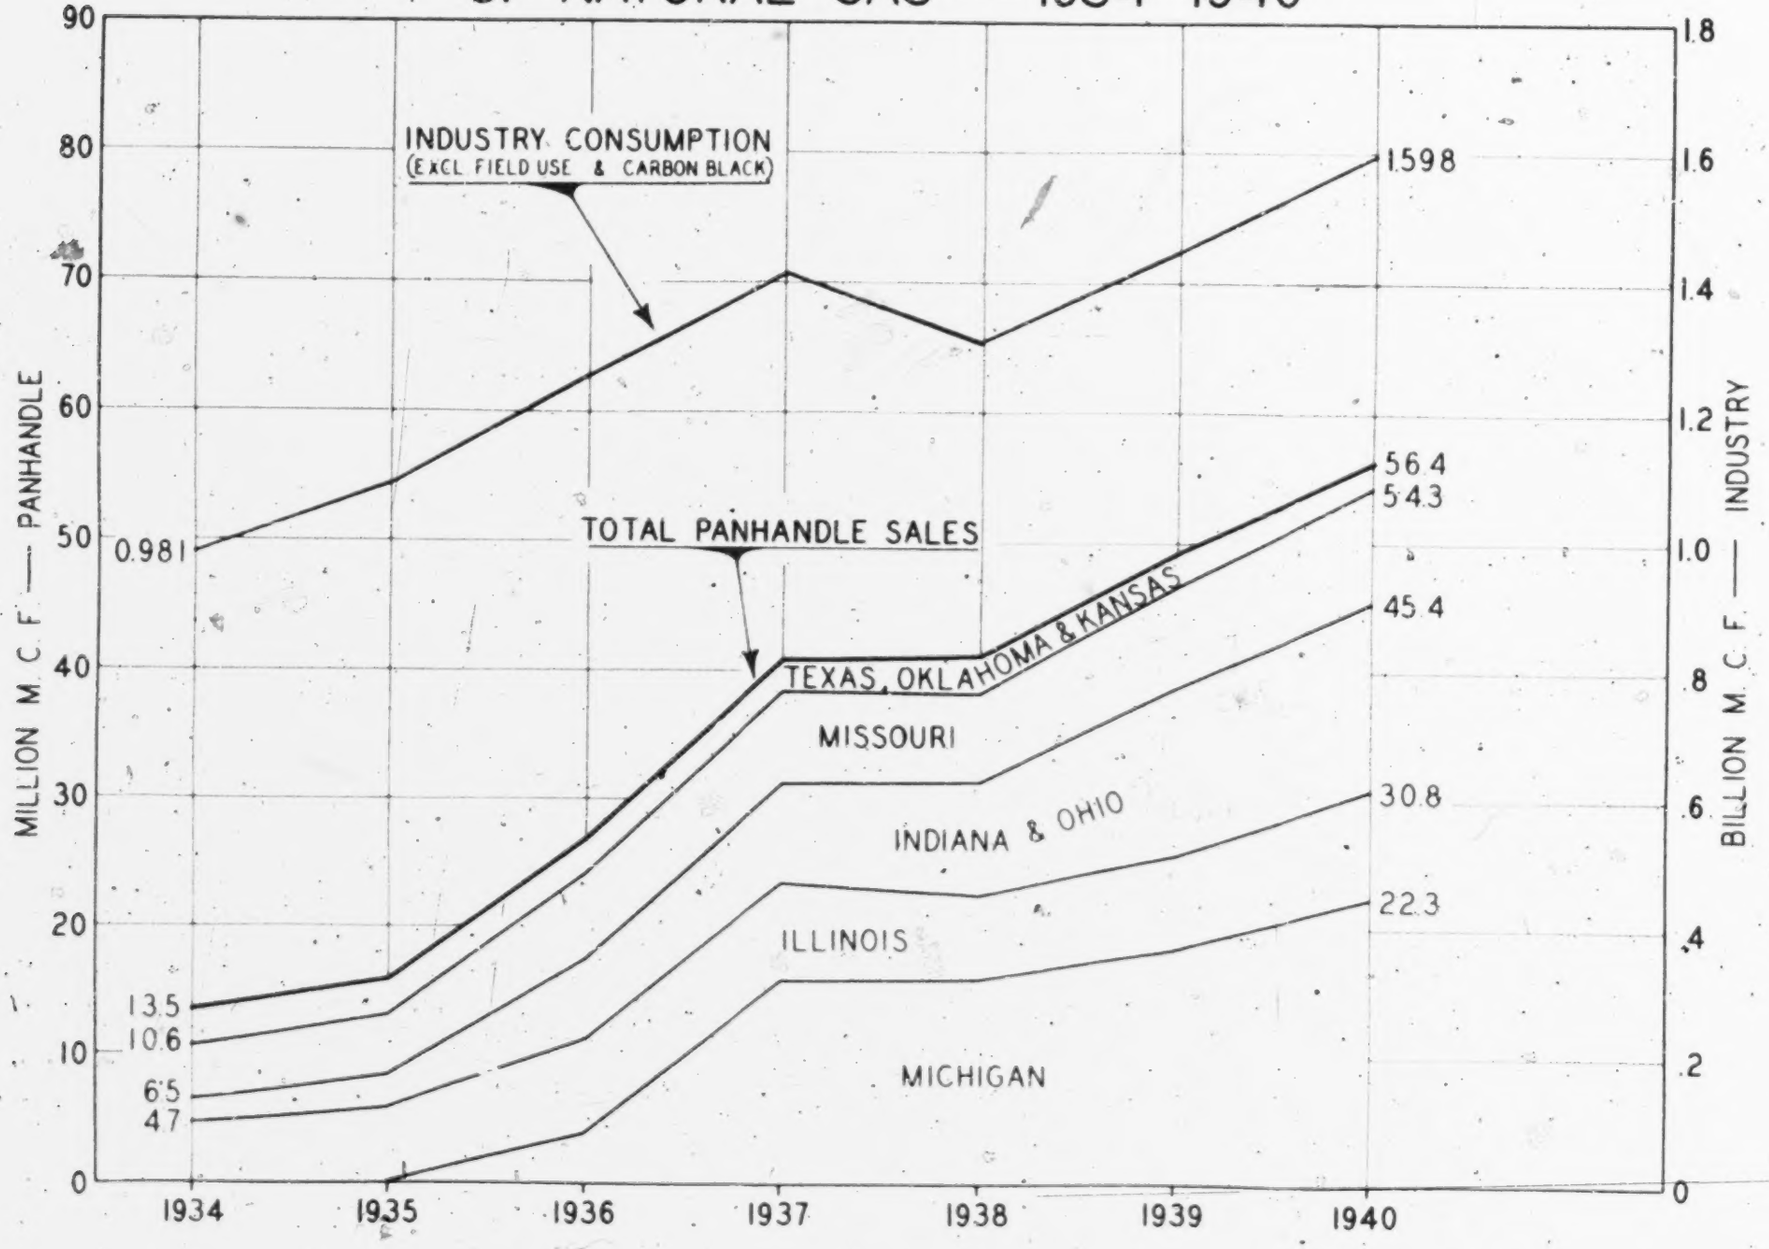
In Chart No. 6, captioned "Panhandle Sales by States vs. Industry Consumption of Natural Gas, 1934-1940," it is clear that the company distributes gas all along its line from the Amarillo and Hugoton fields to Dana, Indiana. Although the addition of Detroit as a market for gas increased aggregate sales of Panhandle Eastern Pipe Line Company substantially by 1937, nevertheless it should be observed that the sales in Indiana and Ohio have shown a greater growth from 1937 than have the sales in Michigan.

Moreover, the exhibit indicates clearly that Michigan contributed in 1940 about 41% of the total Panhandle sales and that Illinois, Indiana and Ohio contributed approximately an equal amount, and the remainder was sold in Missouri, Texas, Oklahoma and Kansas.

The chart further shows that the total sales of Panhandle Eastern Pipe Line Company increased from 13,497,649 M. C. F. in 1934 to 56,394,762 M. C. F. in 1940, and that the rate of increase for the period was greater than the industry consumption of natural gas, excluding gas used in the fields and for the manufacture of carbon black.

- CHART NO. 6 -

PANHANDLE SALES BY STATES -VS- INDUSTRY CONSUMPTION OF NATURAL GAS — 1934-1940



[fol. 13557] Trends of Gross Revenue—1934-1940

Panhandle vs. Other Pipe Line Cos. & Industry.

In Chart No. 7, captioned "Trends of Gross Revenue—1934-1940—Panhandle vs. Other Pipe Line Cos. & Industry," all data compared had been reduced to relatives in terms of 1934 equals 100. This indicates that Panhandle Eastern Pipe Line Company has shown a much more rapid growth than that shown by either the total industry or by the total for other pipe line companies.

Panhandle Eastern Pipe Line Company increased 344% from 1934 to 1940, while the total industry increased 38.68% from 1934 to 1939 and the total of all other pipe line companies increased 91.30% from 1934 to 1940.

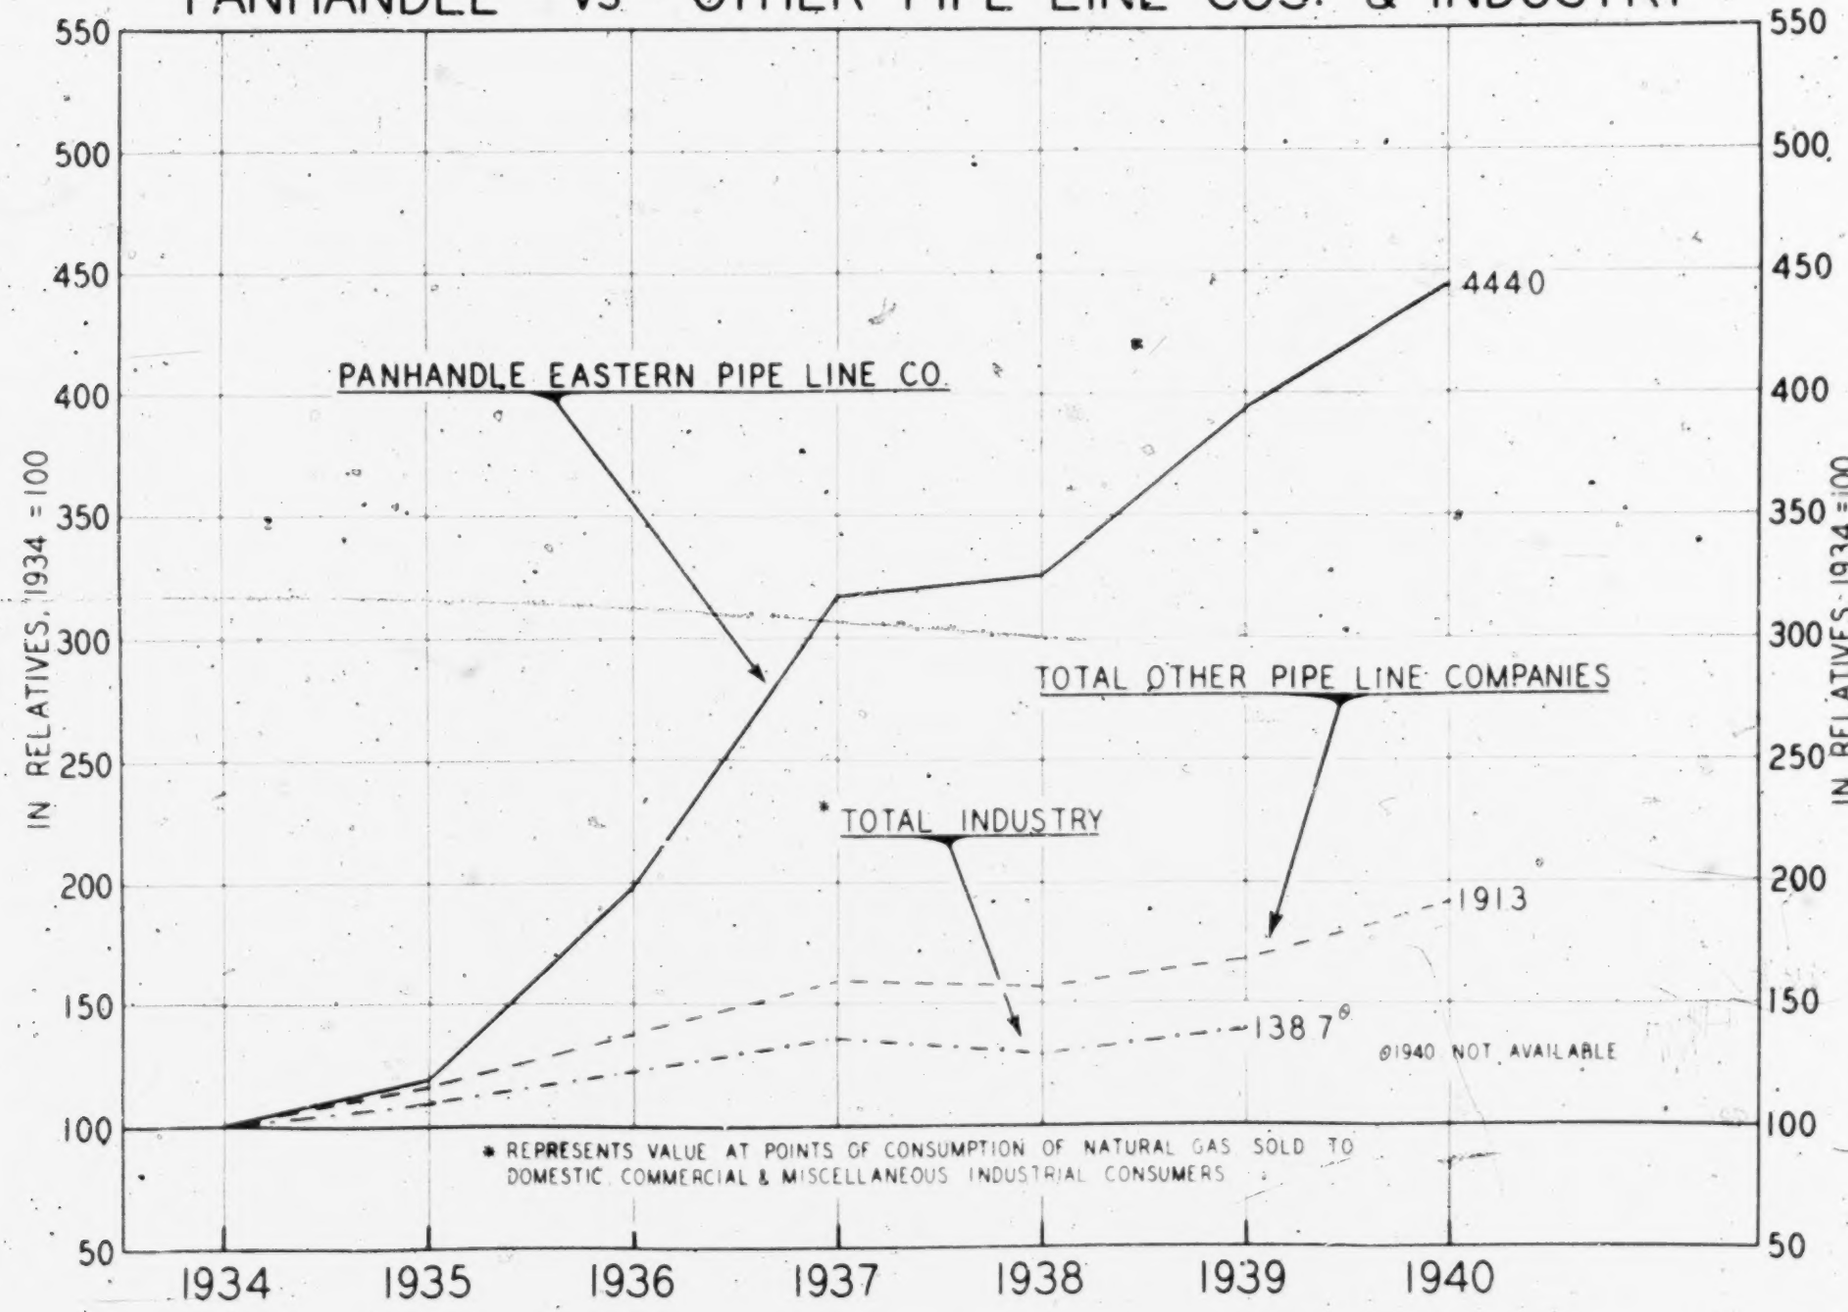
As shown in the supporting table in the Appendix at the end of this report, in the same period of time Cities Service Gas Company increased 44.32%, El Paso Natural Gas Company increased 214.34%, Interstate Natural Gas Company, Inc. increased 71.29%, Memphis Natural Gas Company increased 87.15%, Mississippi River Fuel Corporation increased 85.03%, Northern Natural Gas Company increased 100.84% and Southern Natural Gas Company increased 200.88%.

It certainly can be said from these data that Panhandle Eastern Pipe Line Company has been a useful and rapidly growing company and recent trends indicate that such growth is to continue for several years to come.

EXHIBIT 65

- CHART NO. 7 -

TRENDS OF GROSS REVENUE — 1934-1940
PANHANDLE - vs - OTHER PIPE LINE COS. & INDUSTRY



[fol. 13559] Operating Ratio Of Panhandle Compared With Other Pipe Line Companies—1934-1940.

In Chart No. 8, captioned "Operating Ratio of Panhandle Compared with Other Pipe Line Companies—1934-1940," a comparison is made of the operating ratios (the percent of gross revenue consumed by operating expenses) of Panhandle Eastern Pipe Line Company with those of Other Pipe Line Companies on two bases, i. e., operating ratios before taxes as shown in the first box and the ratios after taxes appearing in the other box. The red lines in both of these divisions represent data of Panhandle while the grey lines cover data on Other Pipe Line Companies, which are the same companies discussed previously.

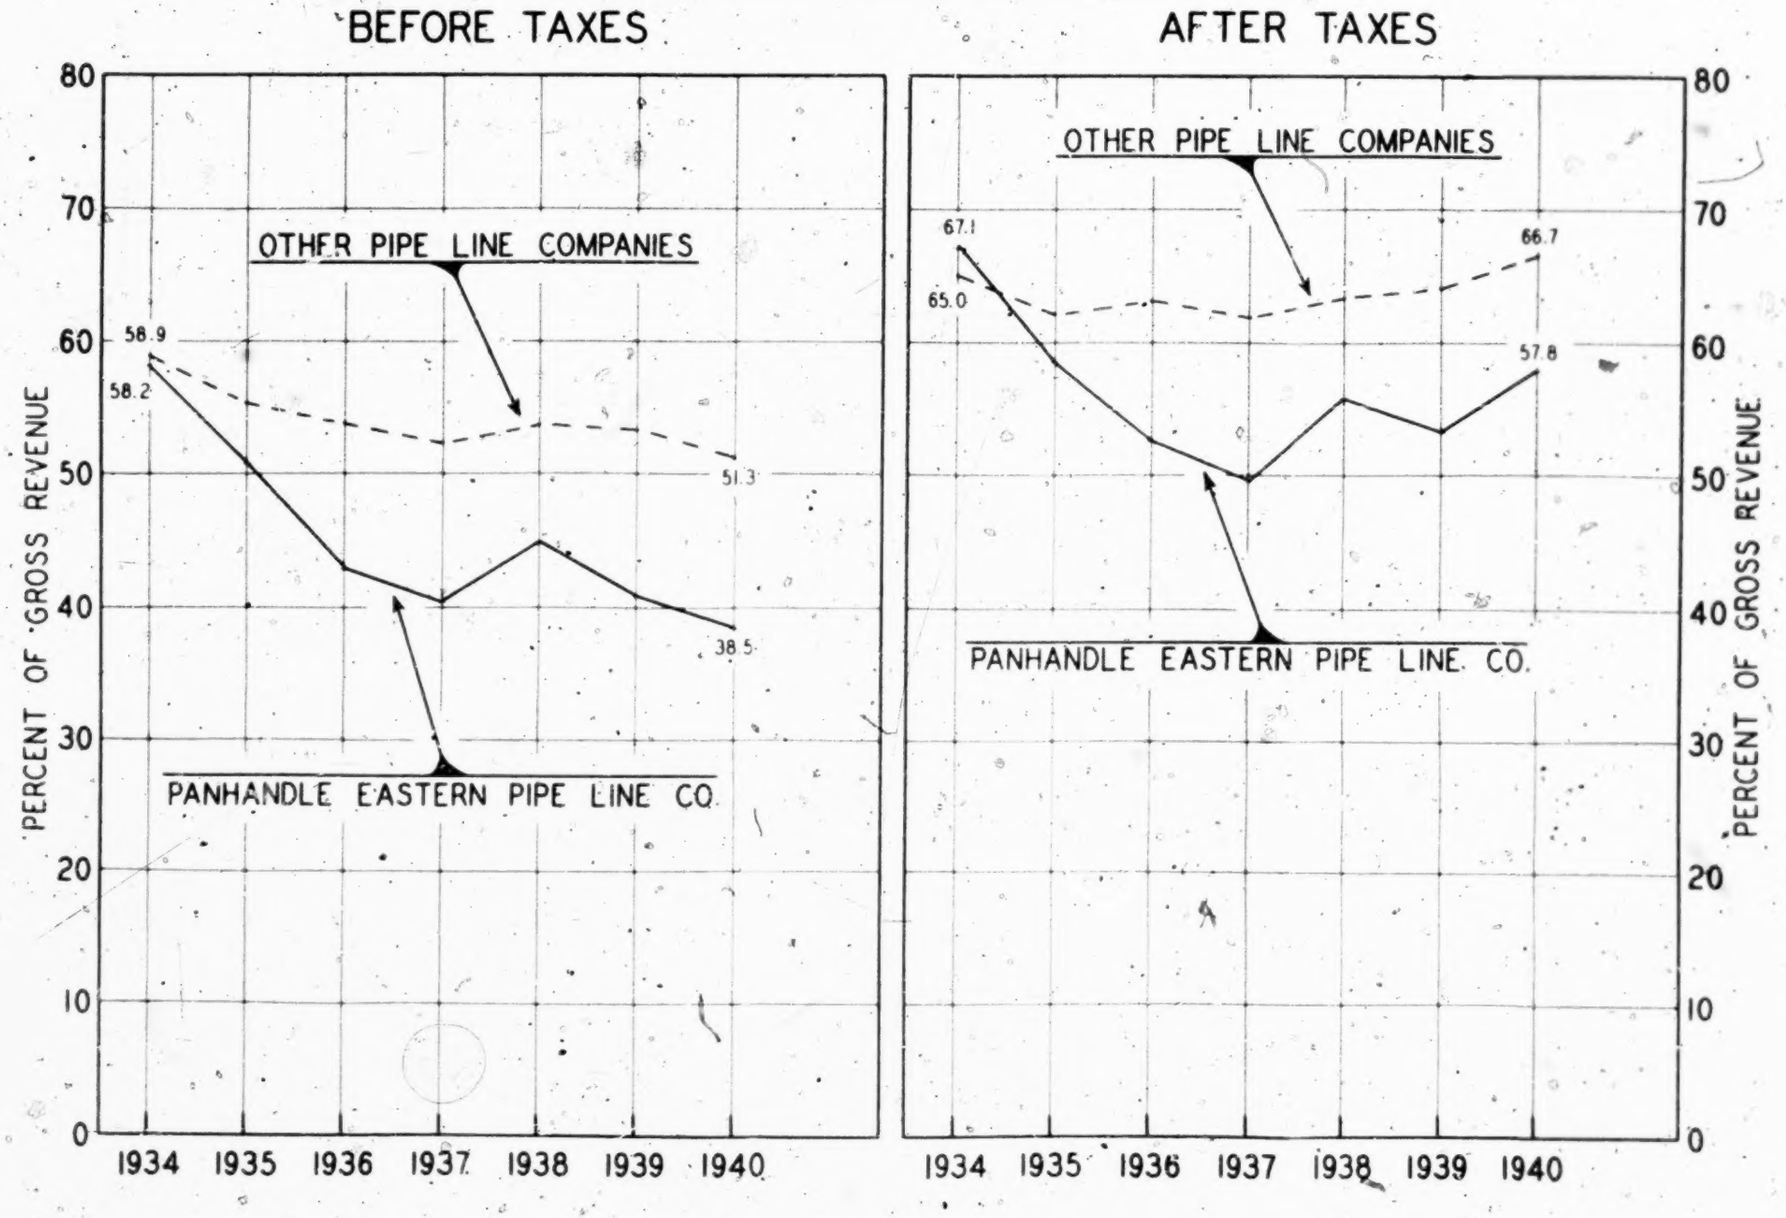
As will be seen in the first box, the trend of these ratios in both cases was steadily downward during the period 1934 through 1940. The decrease, however, for Panhandle, from 58.2% to 38.5% was much greater than the decrease from 58.9% to 51.3% for Other Pipe Line Companies. Thus, on the surface, Panhandle showed a much more favorable picture than the average company in the industry.

The second box on this chart definitely points out the effect the increasing tax load has had on the operating ratios. In the case of Panhandle, the operating ratio after taxes declined from 67.06% in 1934 to 49.71% in 1937 but, thereafter, the trend was reversed rising to 57.78% in 1940. It is obvious that the rising tax burden is tending to offset benefits of efficient operation. Moreover, it is known that taxes for 1941 will be considerably higher than for 1940. It is of interest to note that in 1940 the ratio after taxes for Other Pipe Line Companies was at the highest point for the seven year period studied.

EXHIBIT 65

- CHART NO. 8 -

OPERATING RATIO OF PANHANDLE COMPARED WITH OTHER PIPE LINE COMPANIES — 1934-1940



[fol. 13561] Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Co.—1934-1940.

In Chart No. 9, captioned "Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Co.—1934-1940," is shown the trends of the principal items making up Net Operating Income—after Taxes for the years 1934 through 1940. The columns, in the various boxes, represent the actual dollar amounts for each year while the line shows the percent each item is of gross revenue.

In the first box, I have shown the trend of gross revenues over the seven year period. This trend has been definitely upward for the entire period increasing from slightly more than $3,000,000 in 1934 to over $13,500,000 in 1940.

Operating Expenses—Before Taxes as portrayed in box 2, likewise have trended upward increasing from less than $1,800,000 in 1934 to over $5,200,000 in 1940. In relation to gross revenue, however, the trend has been sharply downward falling from 58.20% in 1934 to 38.50% in 1940. This fact clearly indicates a steady increase in operating efficiency.

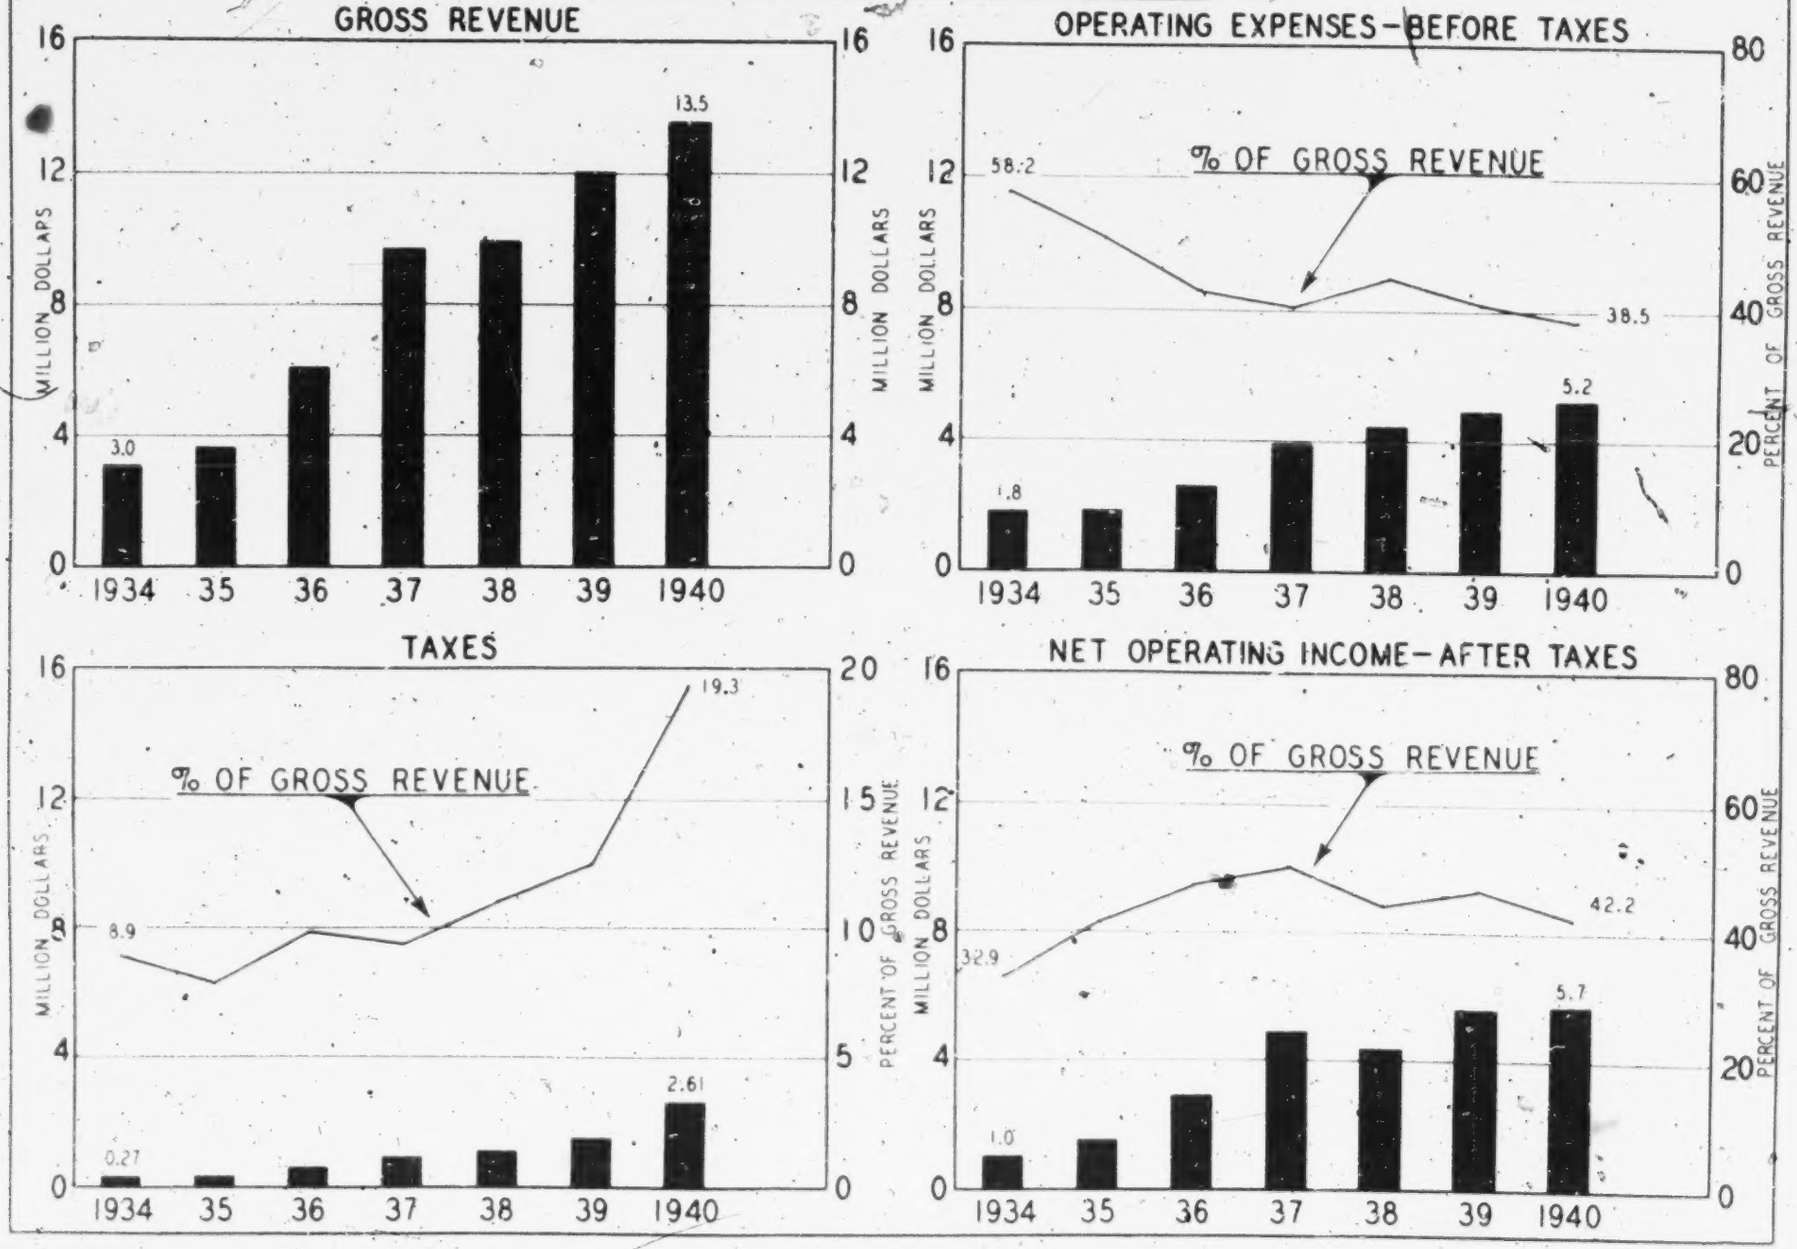
In the lower left hand corner of the chart, in box 3, I have shown data on taxes. This item over the period has recorded a large increase rising from $270,204 in 1934 to $2,610,470 in 1940 or otherwise an increase of almost nine hundred percent. On the basis of percent of gross revenue, the increase was from 8.9% to 19.3%. As pointed out in the previous chart, this adverse trend has tended to offset the favorable trend in the operating expense ratio.

The final box presents net operating income after taxes for the period studied. While the trend of such income has been generally upward, the actual increase between 1939 and 1940 amounted to only approximately $112,000 despite the increase of approximately $1,539,000 in gross revenues. In other words, because of increased costs and particularly increased taxes, the company has reached the point that, despite a sharply increasing gross revenue, there is little prospect of much, if any, increase in net operating income after taxes.

EXHIBIT 65

- CHART NO. 9 -

TREND OF REVENUE AND EXPENSES OF PANHANDLE EASTERN PIPE LINE CO. — 1934-1940



[fol. 13563] Percent Earned on Invested Capital of Panhandle Based Upon Capital Structure.

In Chart No. 10, captioned "Percent Earned on Invested Capital of Panhandle Based Upon Capital Structure," I have given a breakdown of invested capital on the first half of the chart and operating income expressed in dollars and also as percent earned on invested capital on the other half.

As shown by the legend on the invested capital section of the chart, the solid red portions of the bars represent common stock and surplus, the spotted sections cover preferred stock and the striped portions represent net debt. In the Operating Income section, the bars show the dollar amount of net operating income for the various years and the line reflects the ratio of the operating income to invested capital.

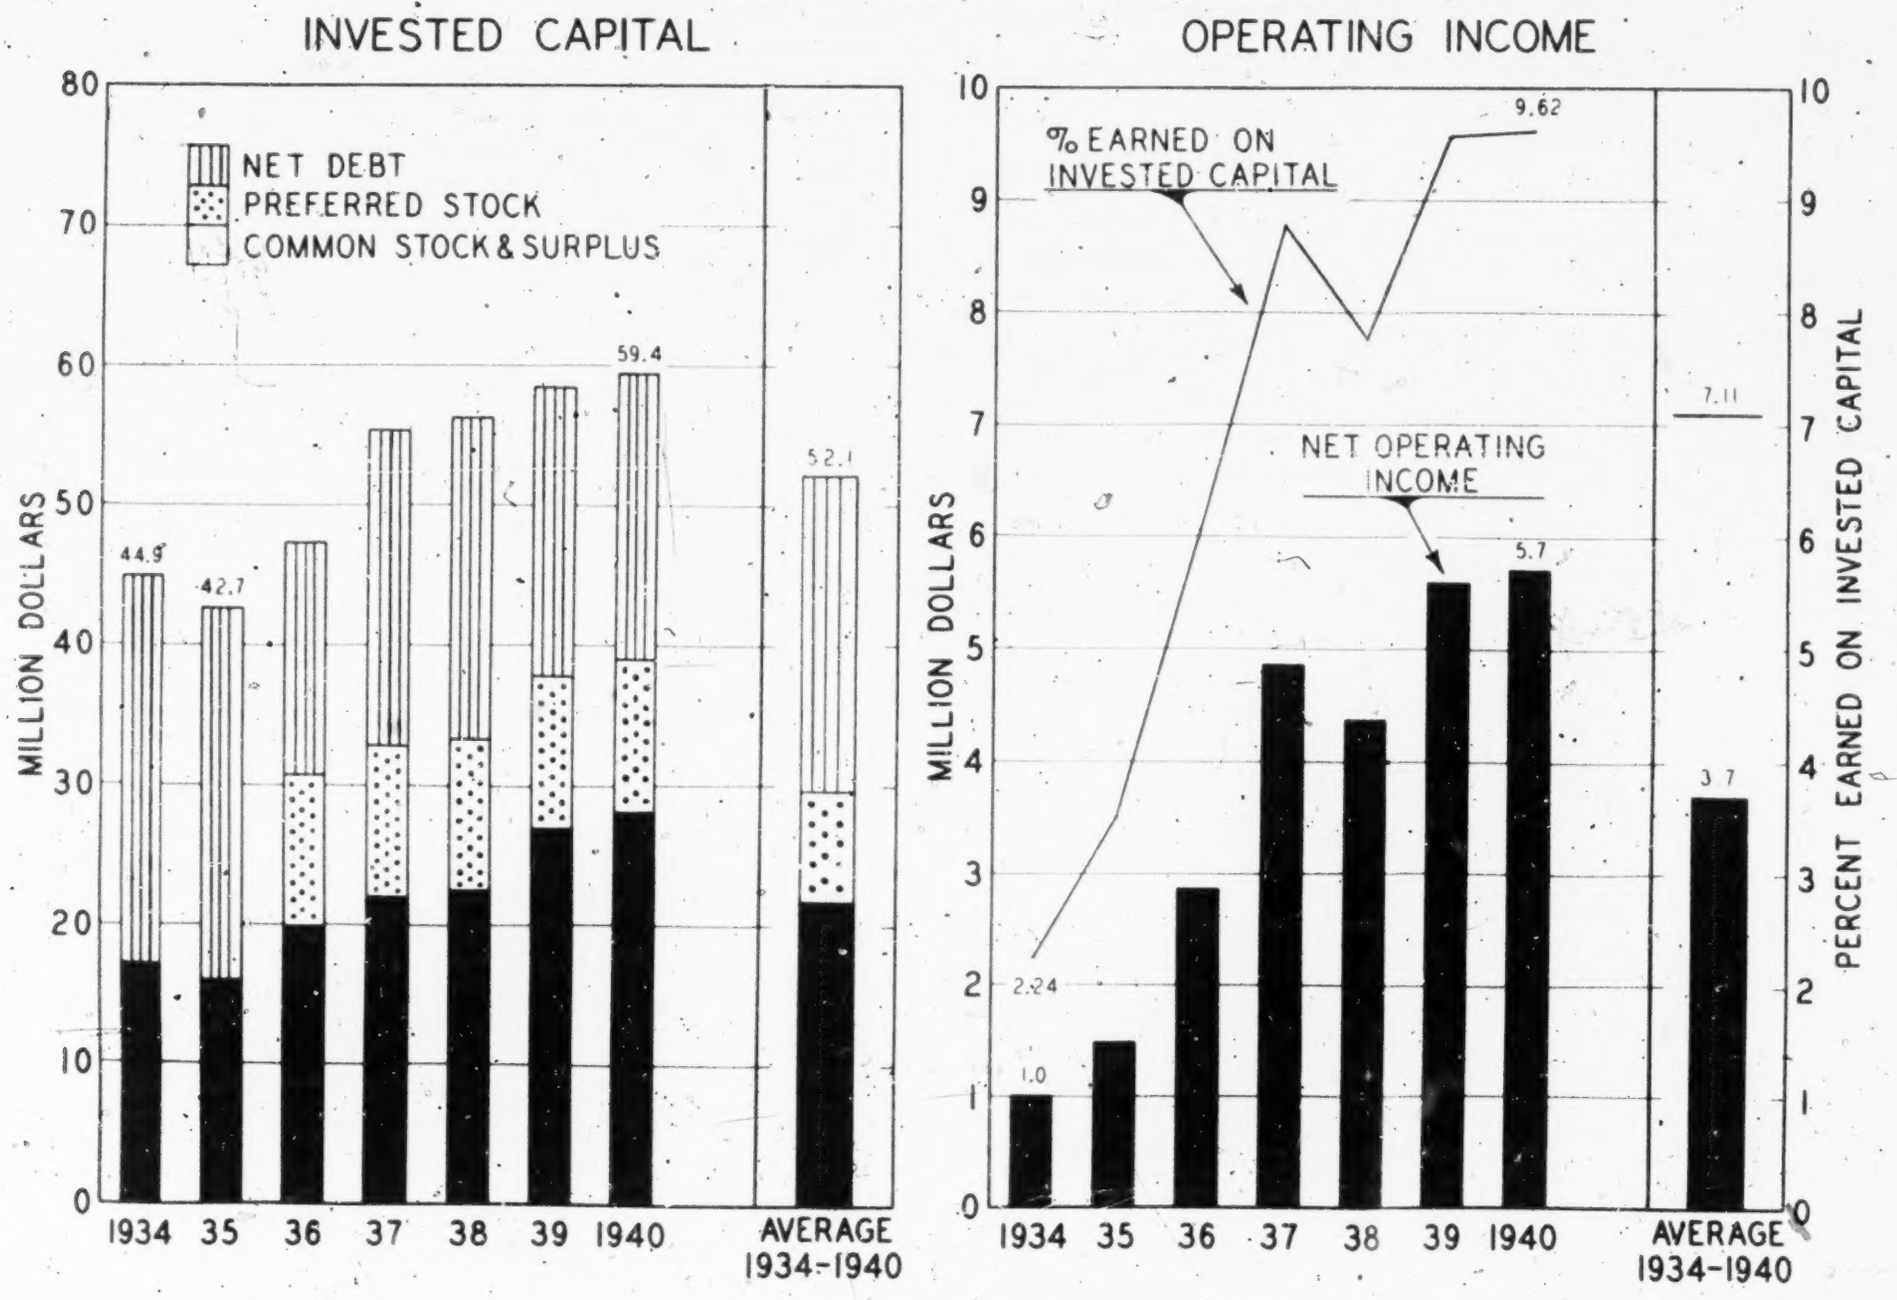
It will be seen that the total invested capital which was $44,910,598 at the end of 1934 decreased slightly to $42,569,166 in 1935 and thereafter increased steadily to $59,407,968 at the end of 1940. The average for the period as shown by the bar on the extreme right of the first section amounted to $52,057,377. In 1936, preferred stock was issued in exchange for 6% promissory notes and thereafter the capital structure of the company was composed of bonds, preferred stock and common stock.

On the second half of the chart, I have repeated the net operating income as shown on the previous chart plus a bar showing the average which amounted to $3,701,058 for the seven year period. Based on these income figures and the invested capital as shown on the first section, I have computed the percent earned on invested capital. This ratio shown by a red line on the chart reflects an increase from 2.24% in 1934 to 9.62% in 1940 and an average of 7.11% for the period.

EXHIBIT 65

- CHART NO. 10 -

PERCENT EARNED ON INVESTED CAPITAL OF PANHANDLE BASED UPON CAPITAL STRUCTURE



[fol. 13565] Percent Earned on Invested Capital of Panhandle Based Upon Net Property, Intangibles and Working Capital.

Chart No. 11, captioned "Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital," shows invested capital from the standpoint of assets rather than on securities outstanding. The percent return on assets is also shown.

The box on the left half of the chart, shows the net property of the company for the years 1934-1940, inclusive, as indicated by the red portion of the bars. The dotted portion represents working capital and intangibles in each of the years covered.

The total invested capital, as portrayed by such assets, amounted to $43,625,441 in 1934. A slight decline to $42,681,582 occurred in 1935, however, this was followed by a gradual rise to a high of $59,921,986 in 1940. For the seven year period, as a whole, invested capital based on net property, intangibles and working capital averaged $52,070,680.

As in the case of the previous chart, the right half of the chart shows the net operating income of the Panhandle Eastern Pipe Line Company for the years, 1934-1940, inclusive, and the percent return that such income shows on the invested capital.

It will be seen that on the basis of net property, intangibles and working capital, net operating income showed a return ranging from 2.30% in 1934 to a high of 9.54% for 1940. Average annual net operating income for the period showed a return of 7.11% on the net property, intangibles and working capital.

EXHIBIT 65

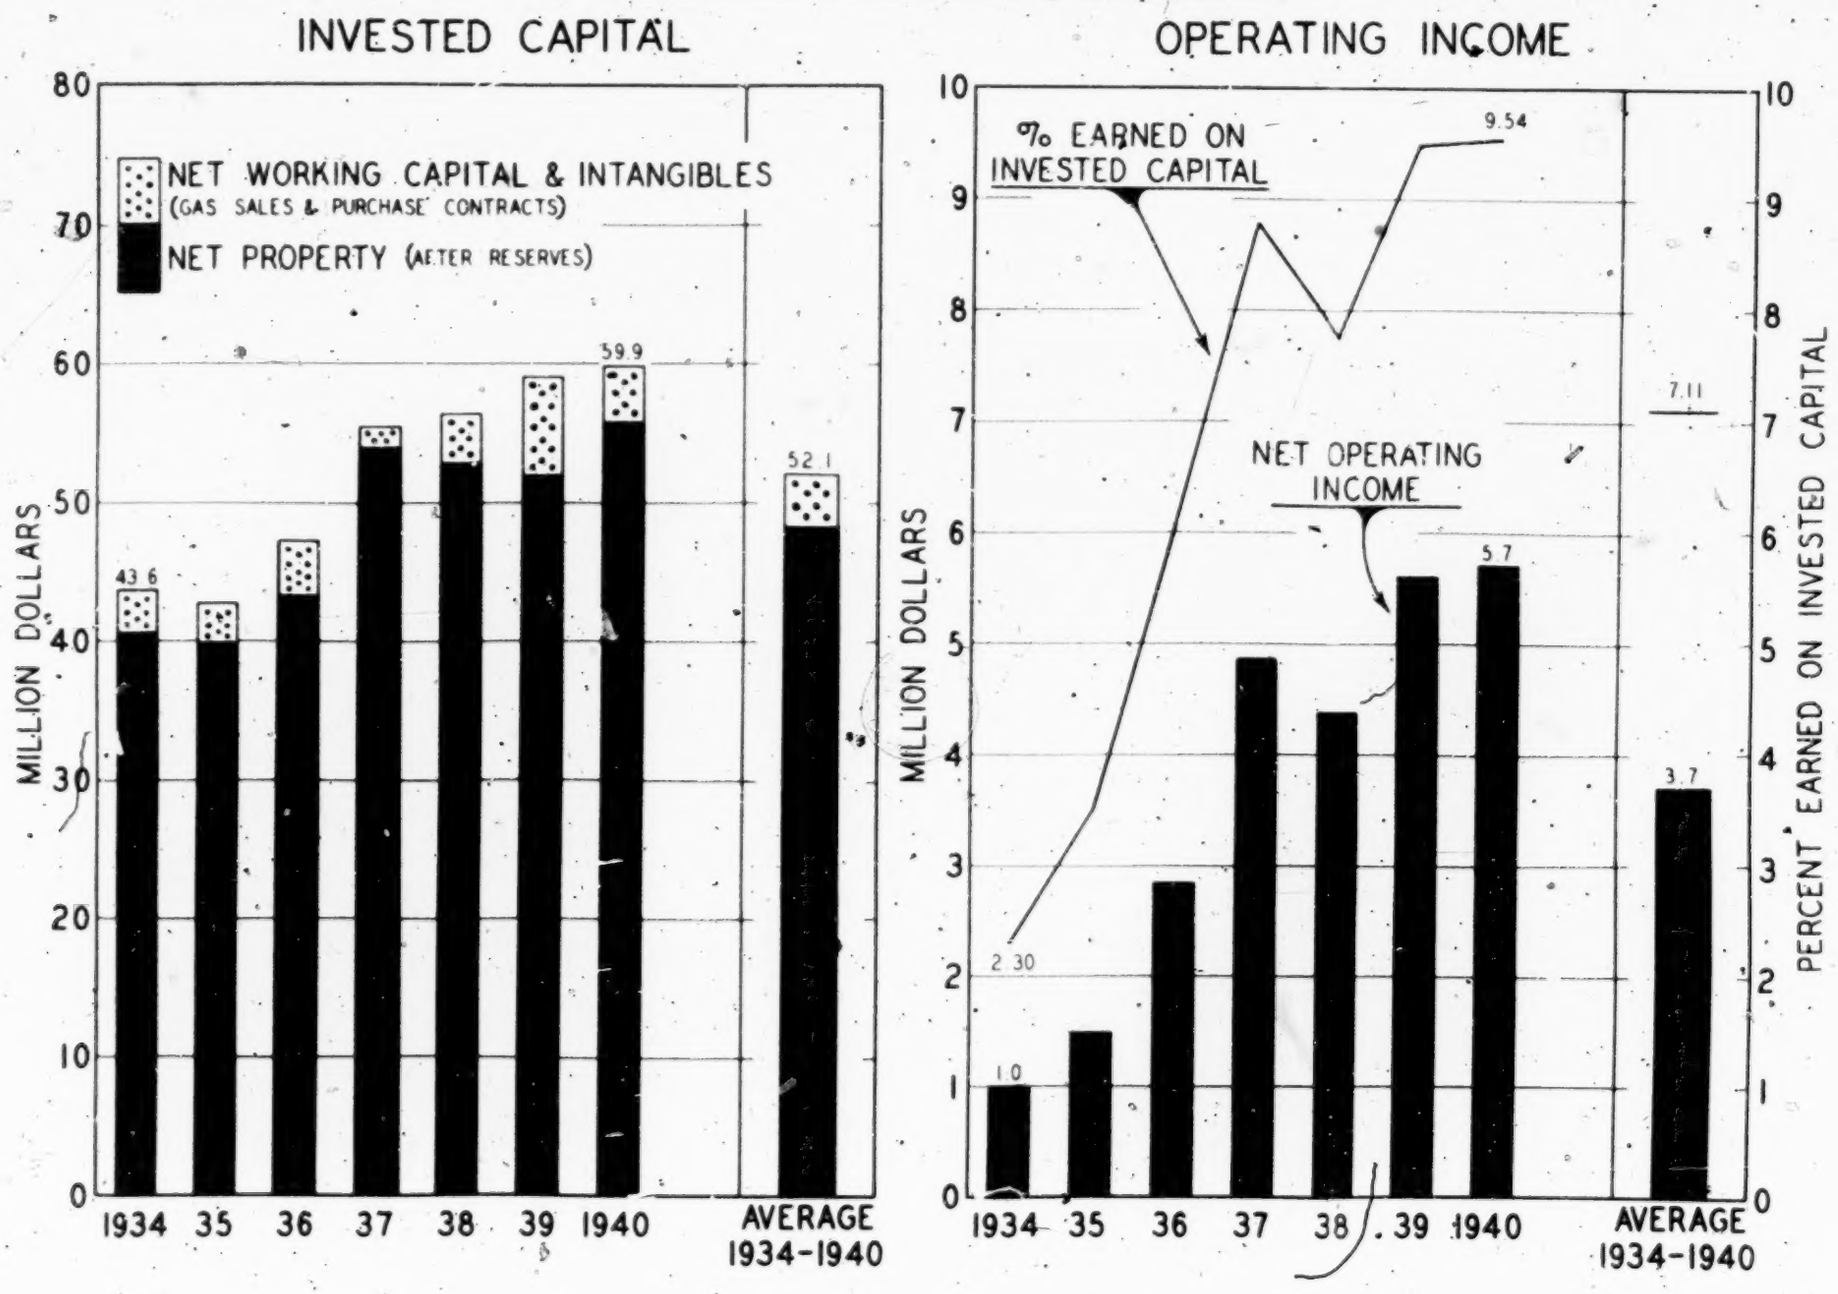
PERCENT EARNED ON INVESTED CAPITAL OF PANHANDLE BASED UPON NET PROPERTY, INTANGIBLES & WORKING CAPITAL



[fol. 13567] Return to Common Stockholders of Panhandle Eastern Pipe Line Company—1934-1940.

Chart No. 12, captioned "Return to Common Stockholders of Panhandle Eastern Pipe Line Company—1934-1940" covers the total investment represented by common stock and surplus and the return on that investment in the form of dividends paid.

As shown in box 1 of the chart, total common stock and surplus which amounted to $17,130,094 in 1934, decreased to $15,984,852 in 1935 and then steadily increased to $25,107,142. Over the seven year period, this item averaged $21,818,994 per year.

The next box, "Dividend Return to Common Stockholders," indicates the total common dividends paid each year and the average for the period. As clearly evident from this graph, the company paid no dividends until 1937 when a total of $364,326 was paid. Subsequently larger amounts were paid, reaching the peak of $2,422,051 in 1940. This amount, however, included a special dividend of $1,211,051 declared early in January of that year out of 1939 earnings. If the data were adjusted to reflect that amount as a 1939 dividend payment, the peak would have been $2,343,387 in 1939 and only $1,211,000 for 1940. Considering the period as a whole, dividend payments averaged $794,026 per year.

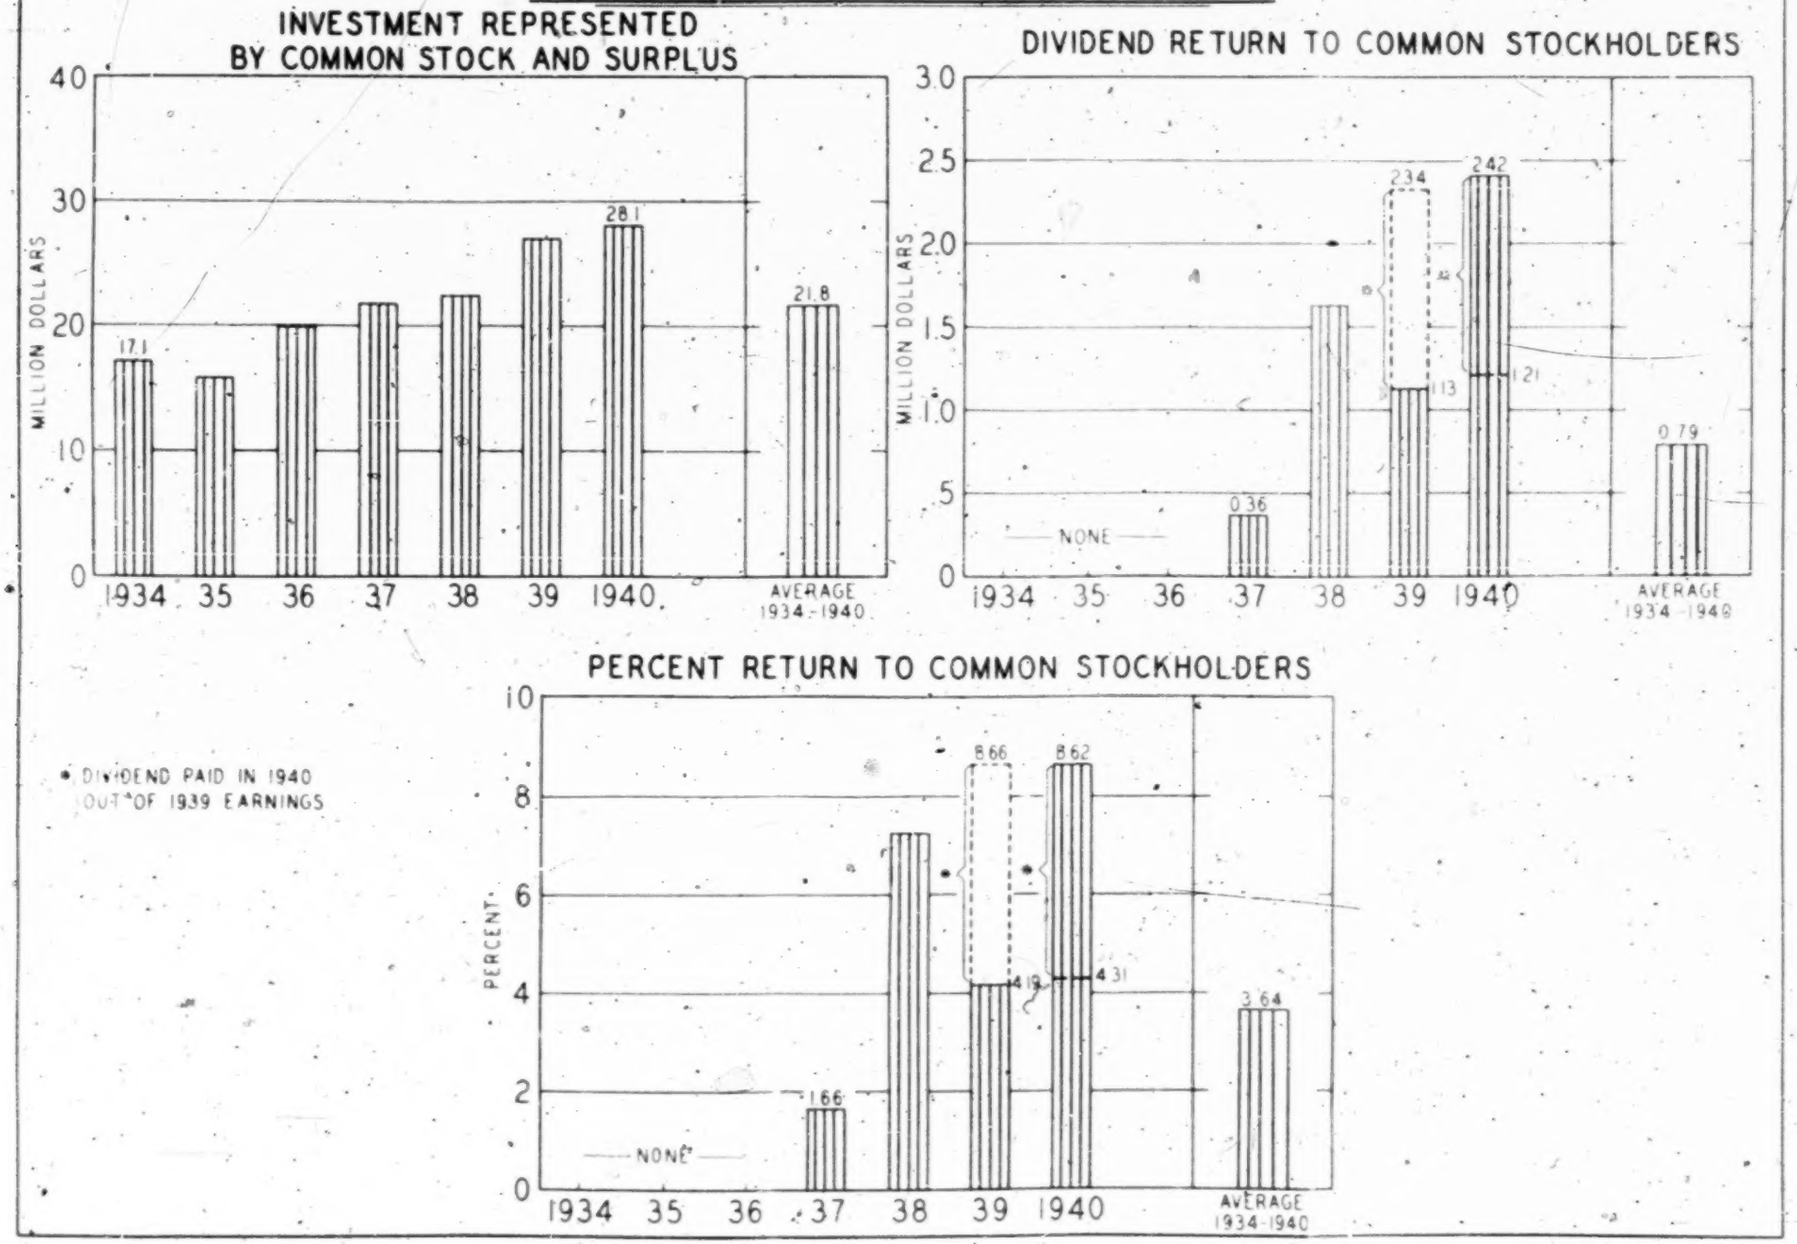
Based upon the data in the first two boxes, the percent return to common stockholders averaged 3.64% for the seven years reviewed.

This and data for the several years individually appear in the third box.

EXHIBIT 65

- CHART NO. 12 -

RETURN TO COMMON STOCKHOLDERS OF PANHANDLE EASTERN PIPE LINE COMPANY – 1934-1940



[fol. 13569] New Tax Bill Will Reduce Income Sharply. Computations Based on Operations—12 Mos. Ended June 30, 1941.

Chart No. 13, captioned "New Tax Bill will Reduce Income Sharply" shows the approximate effect of the recently-enacted tax bill, Revenue Act of 1941, on the earnings of Panhandle Eastern Pipe Line Company. The computations appearing on this exhibit are based on the operations for the twelve months ended June 30, 1941.

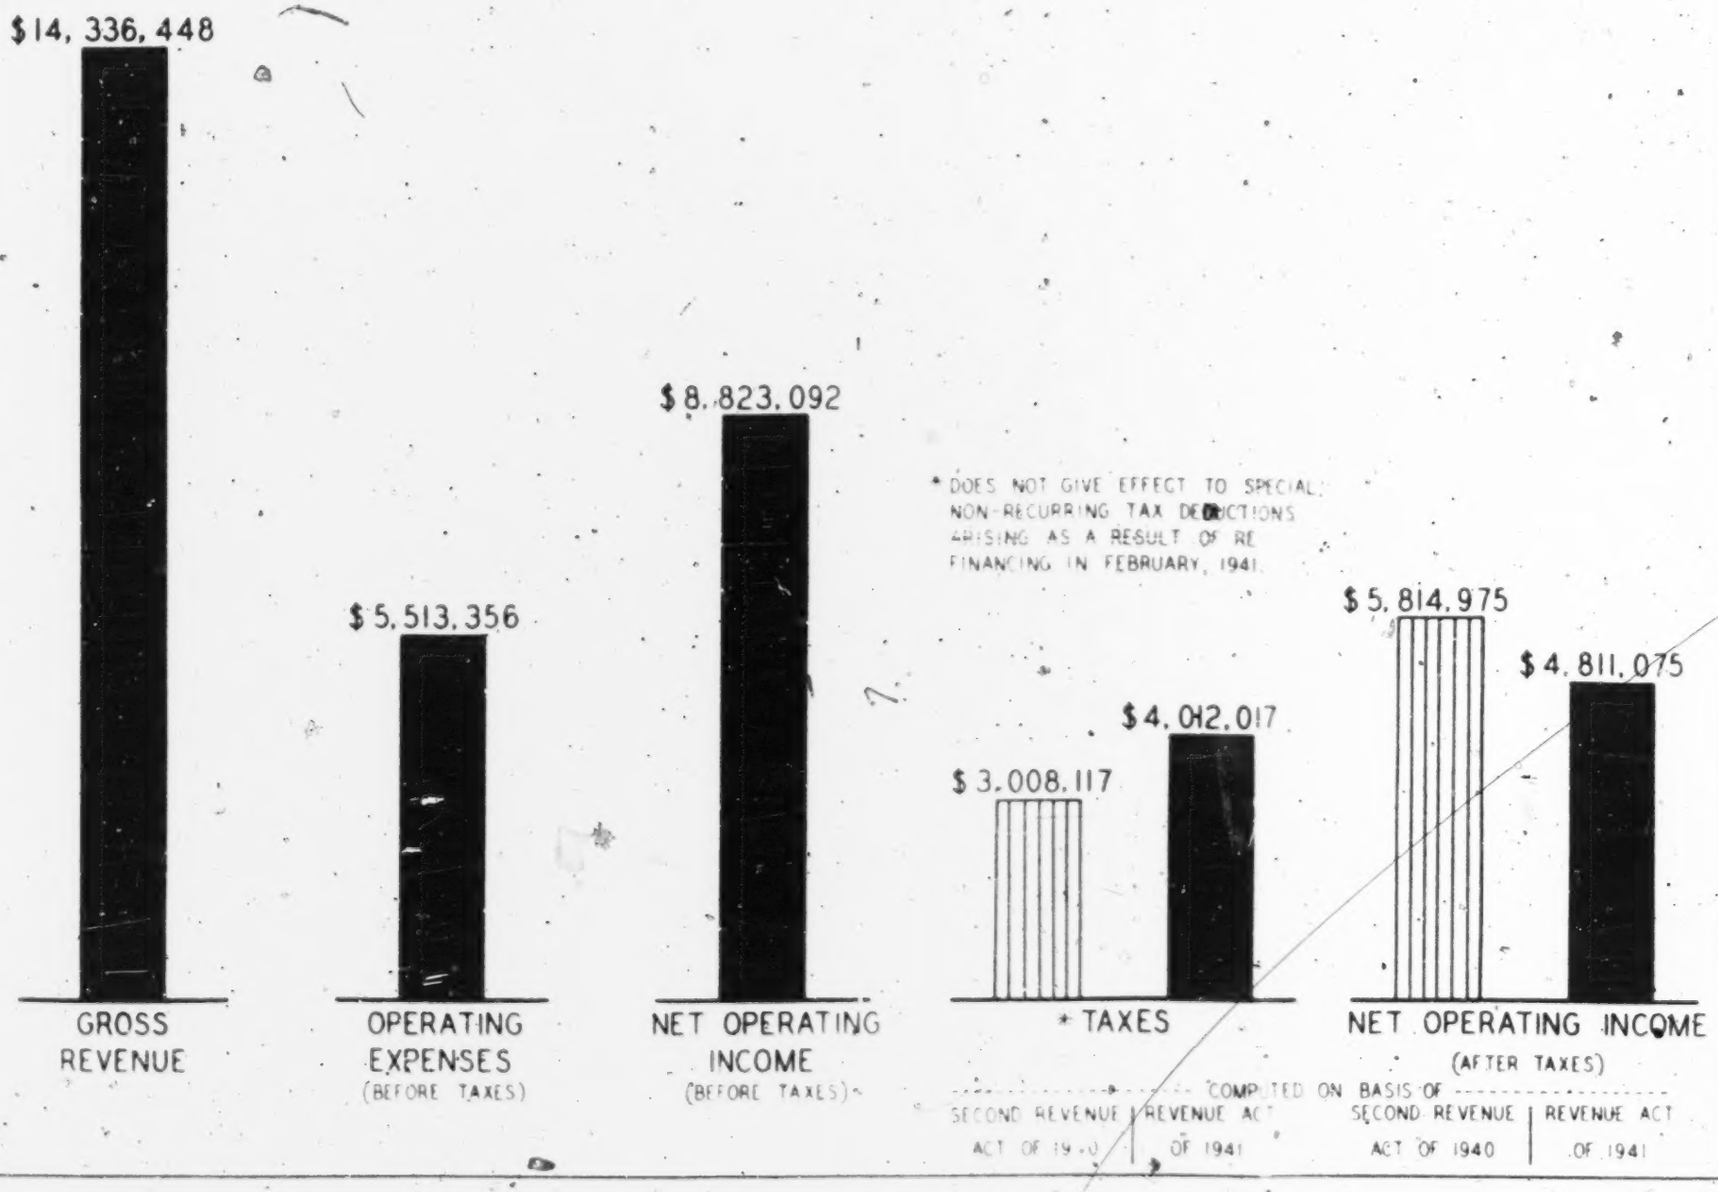
For this period the gross revenue amounted to $14,336,448, Operating expenses (before taxes) $5,513,356 and Net operating income (before taxes) $8,823,092. Based on these data, I estimated that taxes would amount to $4,012,017 under the provisions of the new act as compared with $3,008,117 under the Second Revenue Act of 1940. This comparison is clearly shown by the fourth and fifth bars on the chart.

The last two bars show the net effect of this increased tax liability of $1,003,900 on the net operating income of the company.

EXHIBIT 65

- CHART NO. 13 -

NEW TAX BILL WILL REDUCE INCOME SHARPLY
COMPUTATIONS BASED ON OPERATIONS - 12 MOS. ENDED JUNE 30, 1941



[fol. 13571] Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Co.—As of June 30, 1941.

In Chart No. 14, captioned "Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Co.—As of June 30, 1941," I show the present rate of return on invested capital (net property, net working capital and intangibles) as indicated by the earnings reported for the twelve months ended June 30, 1941.

The invested capital, as based on the net property, net working capital and intangibles, amounted to $61,216,031 on June 30, 1941. This is shown by the bar on the left side of the chart. Of the total, net property accounted for $54,690,594, net working capital $4,661,875 and intangibles $1,863,563.

The rate of return has been based not only on the earnings actually reported by the company for the twelve months ended June 30, 1941, but also on an adjusted basis, adjusting for the increased taxes under the Revenue Act of 1941. Net operating income, as shown in the center bars on the chart, amounted to $5,814,975, before adjusting for the new tax rates. Such earnings, however, were reduced to $4,811,075 after adjustment was made for the new 1941 levies.

On the right side of the chart, it will be seen that the Panhandle Eastern Pipe Line Company showed a return of 9.50% on invested capital as based on net property, net working capital and intangibles and the earnings actually reported for the twelve months ended June 30, 1941. After adjusting for the increased taxes, under the Revenue Act of 1941, the rate of return was reduced to 7.86%.

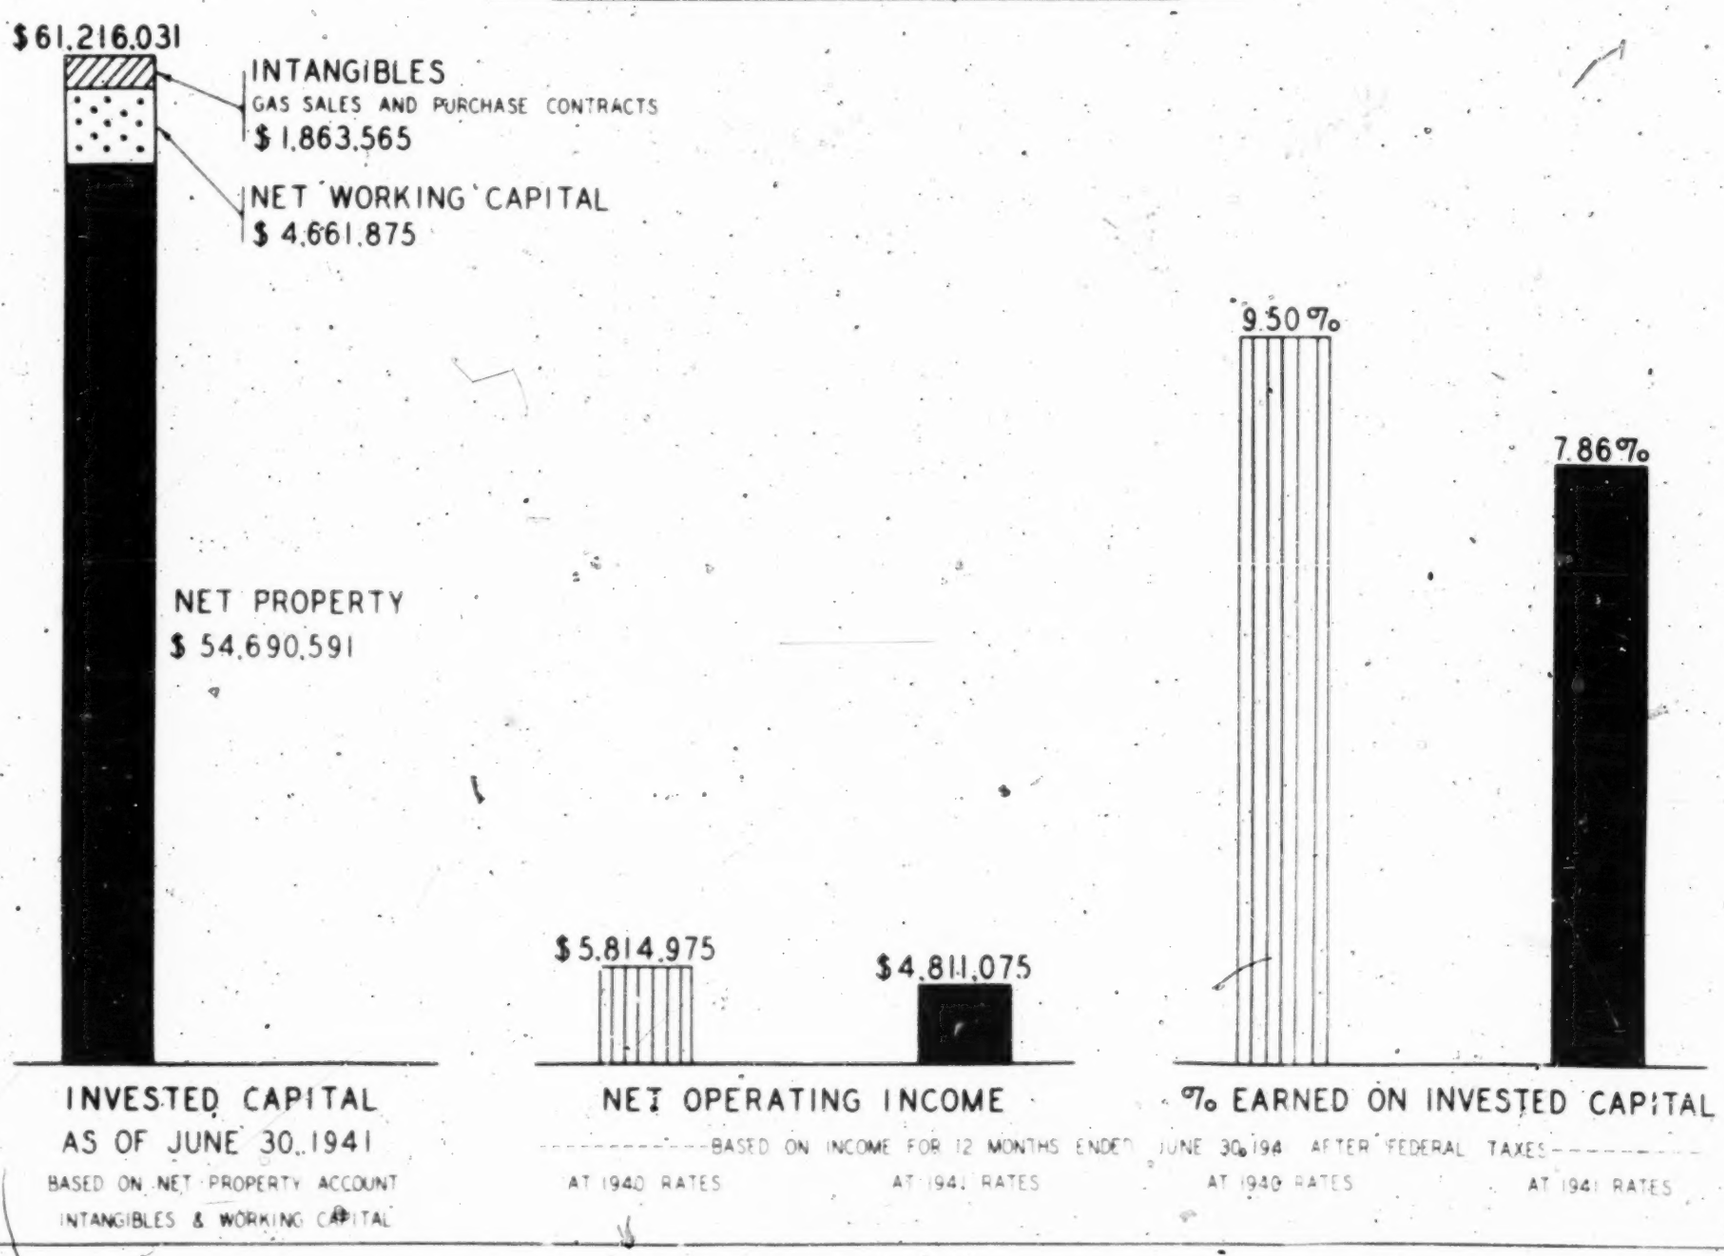
EXHIBIT 65

-CHART NO. 14-

PERCENT EARNED ON INVESTED CAPITAL OF PANHANDLE EASTERN PIPE LINE CO. – AS OF JUNE 30, 1941



[fol. 13573] Percent Earned On Invested Capital Of Panhandle Eastern Pipe Line Co.—As of June 30, 1941.

Chart No. 15, captioned "Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Co.—As of June 30, 1941," shows, as in the case of the previous chart, the rate of return on invested capital. In the present instance, however, invested capital is represented not by net property, net working capital and intangibles but by the capital securities outstanding.

As shown by the bar on the left side of the chart, invested capital, as based on the capital securities outstanding, amounted to $61,423,853. Of the total, net long term debt (less discount and expenses) accounted for $21,165,558, preferred stock $11,000,000 and common stock and surplus $29,258,295.

Also, as in the previous case, the rate of return has been based on the earnings actually reported by the company for the twelve months ended June 30, 1941, and on an adjusted basis, giving effect to the increased taxes under the Revenue Act of 1941. Such earnings, as shown by the bars in the center of the chart, amounted to $5,814,975 before the tax adjustment and $4,811,075 after the tax adjustment.

It will be seen, by the bars on the right side of the chart, that the Panhandle Eastern Pipe Line Company showed a return of 9.47% on invested capital as based on the capital securities outstanding, and the earnings before adjusting for taxes. A 7.83% return was shown by the earnings after the tax judgment.

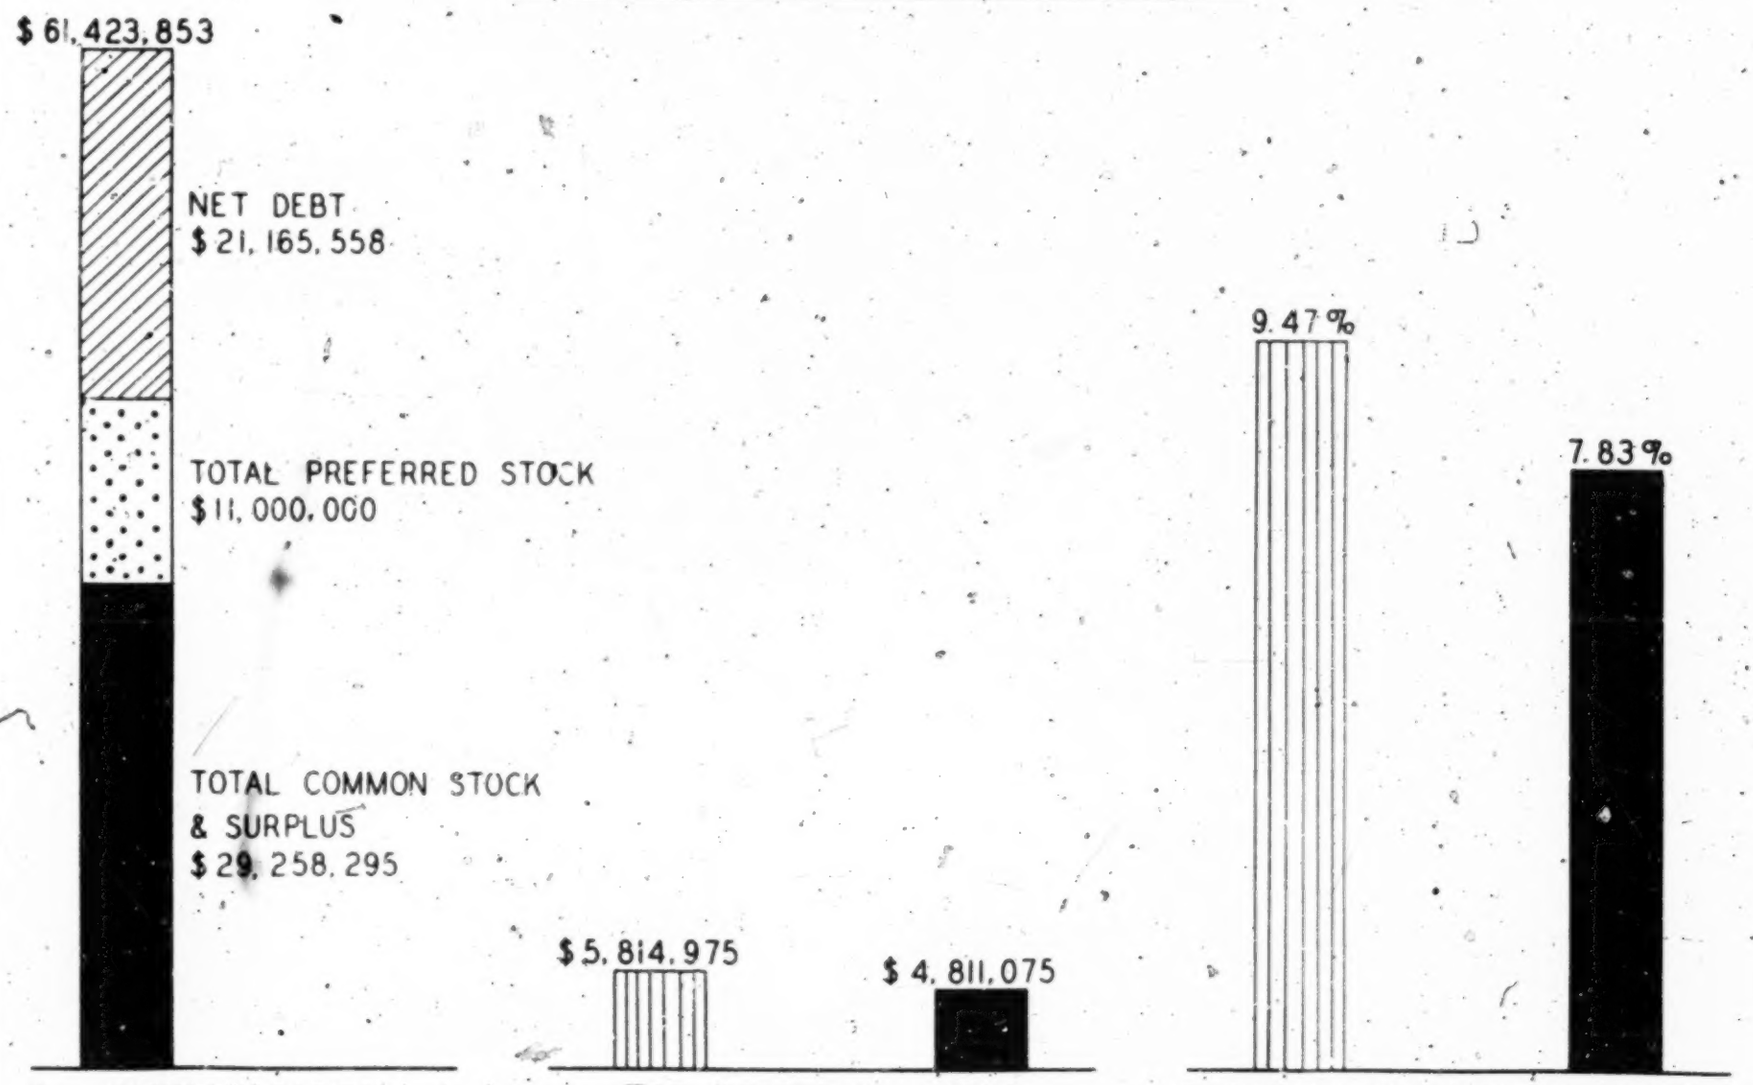
-CHART NO. 15-

PERCENT EARNED ON INVESTED CAPITAL OF PANHANDLE EASTERN PIPE LINE CO. — AS OF JUNE 30, 1941



[fol. 13575] Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Co.—1930-1941.

In Chart No. 16, captioned "Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Co.—1930-1941," the solid red bars represent the annual cost, expressed in percentage, of the company's debt capital since its inception.

The first bond issue was sold by the company in October, 1930, at a price of 90 for 6% mortgage bonds due October 1, 1950. These bonds carried a sinking fund provision designed to retire more than 50% of the outstanding amount of maturity, the sinking fund prices being at the rate of 105% of face value of the greater part of the period, and thereafter dropping by degrees to 100% of face amount. The average cost of this issue, giving weight to the sinking fund premium and the length of time the capital would be available to the company, was 7.29% annually as shown on the chart for the year 1930 and supported by Appendix Table for Chart No. 16, Page 4 of 5, at the end of this report.

The issuance in 1931 and 1932 of 6% promissory notes due in 1950 and sold at par served to lower the overall cost of debt capital somewhat for the ensuing years of 1931 to 1935 while such notes were outstanding.

In 1937, the 20-year mortgage 6's of 1950 were refunded with the proceeds of the sale of 1st mortgage and 1st lien series A sinking fund 4's of 1952. The net price received by the company was 95.02% of face value and this issue carried a sinking fund designed to retire the entire outstanding amount at maturity. The average yield, again giving weight to the actual length of time the money was available to the Panhandle Eastern Pipe Line Company, was computed at 4.66%, which represented a substantial reduction in capital costs accomplished through refunding. In January, 1941, owing to exceedingly favorable money market conditions, another refunding program was accomplished which allowed retirement of the previously outstanding mortgage bonds through the proceeds of $5,000,000 serial notes carrying interest coupons varying from 0.75%

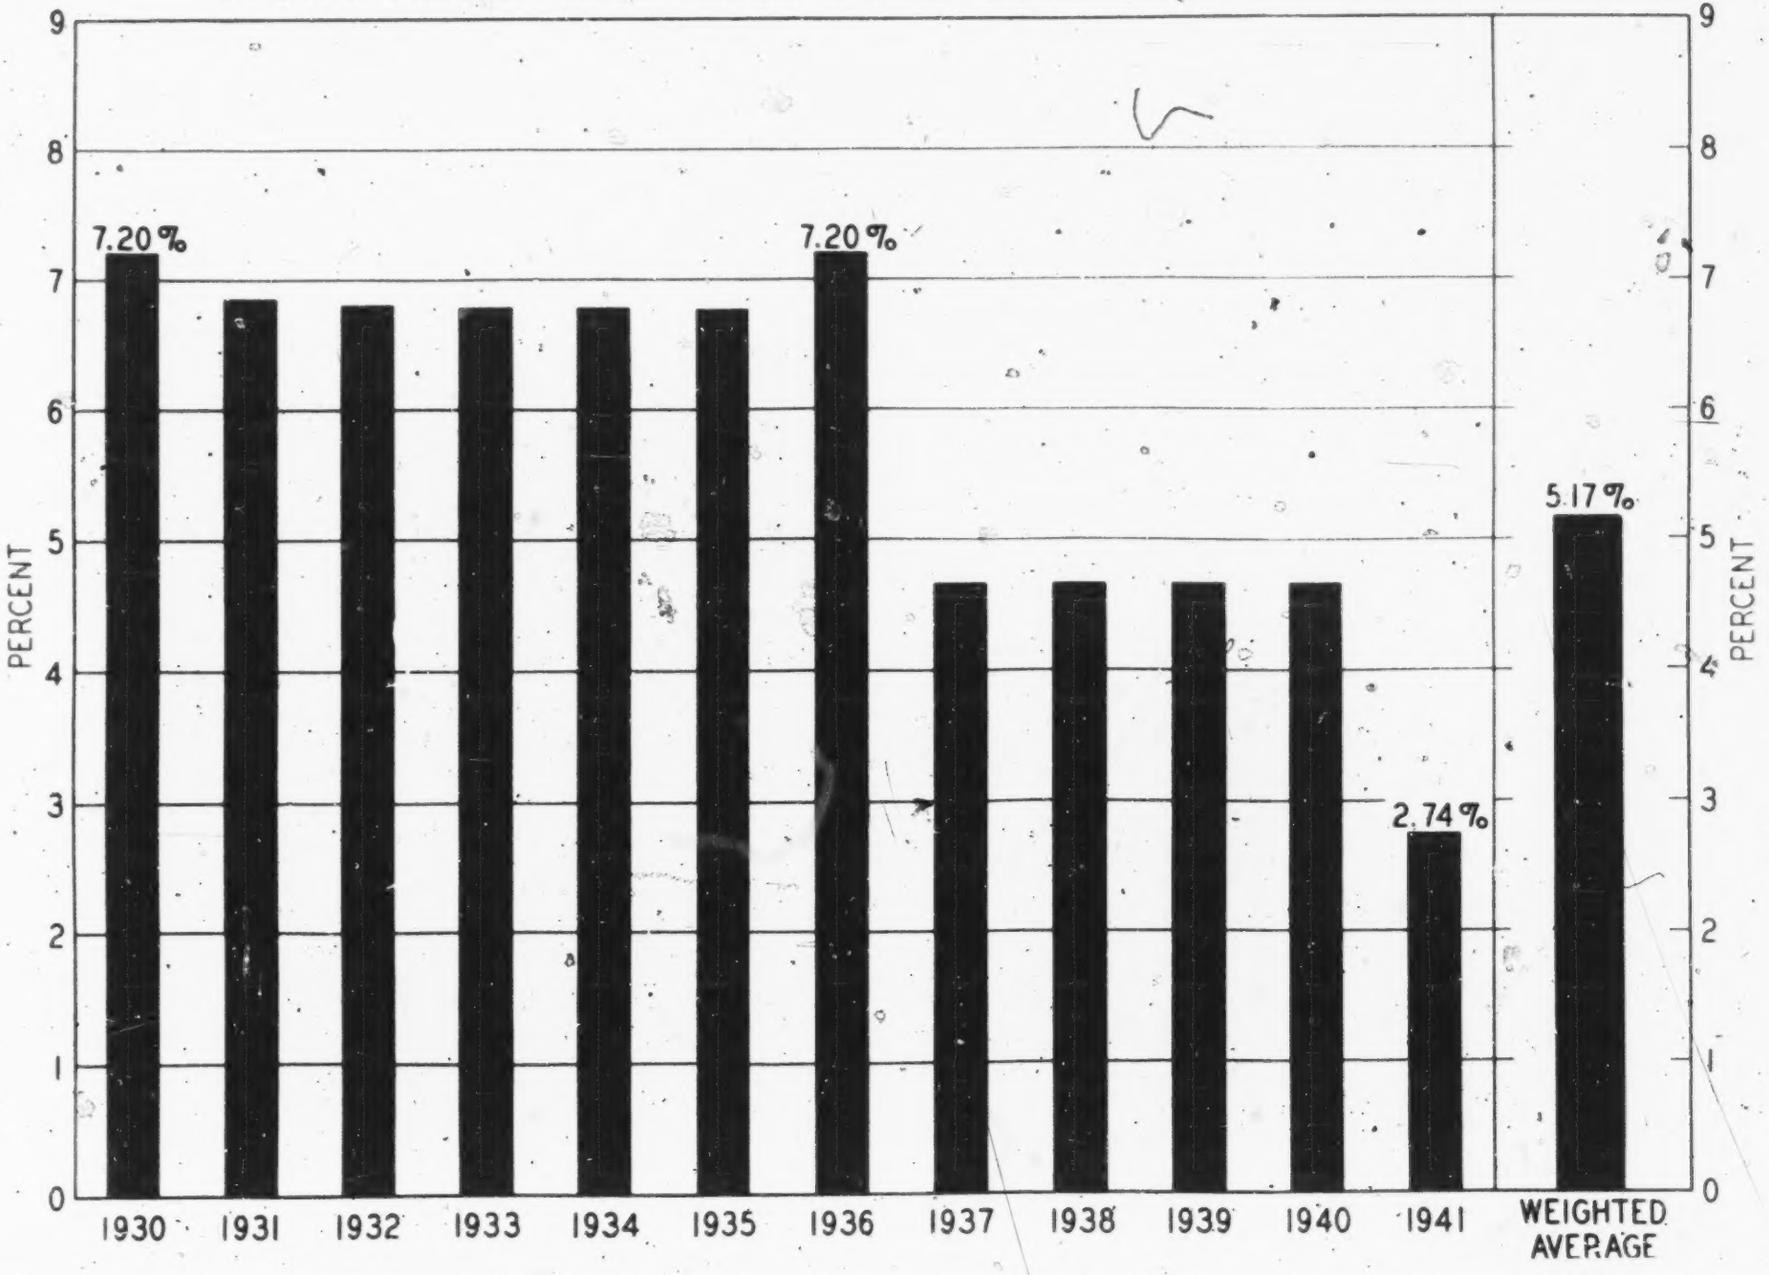
to 1.50% and due $1,250,000 annually from November 1, 1942 to November 1, 1945, $6,250,000 first mortgage and first lien series A bonds carrying interest coupons varying from 1.65% to 2.30%, due $1,250,000 annually from November 1, 1946 to November 1, 1950, and $12,000,000 first mortgage and first lien series B, sinking fund 3's of 1960, carrying sinking fund provisions designed to retire $1,200,000 annually, November 1, 1951 to and including November 1, 1960. The average interest cost of this financing, again giving weight to the length of time the capital would be available to the company, was 2.74%. This rate compares very favorably with the rates paid by other companies in the field and is the lowest that could reasonably be expected.

Despite this fact, however, the historical cost of debt capital to the Panhandle Eastern Pipe Line Company has averaged 5.17% from the inception of the company to and including 1941. Such average is conservatively computed by giving greatest weight to the most recent figures and least weight to the earliest costs which were established late in 1930.

EXHIBIT 65

- CHART NO. 16 -

HISTORICAL COSTS OF DEBT CAPITAL OF PANHANDLE EASTERN PIPE LINE CO. — 1930-1941



[fol. 13577] Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company

On Chart No. 17, captioned "Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company," details of present funded debts are shown, together with the schedules of debt retirement, debt outstanding and the average annual interest cost of debt.

In February 1941, the company sold $12,000,000 principal amount of First Mortgage and First Lien 3% Bonds Series B, due November 1, 1960, $6,250,000 principal amount of First Mortgage and First Lien Bonds, Series A, due serially November 1, 1946 to November 1, 1950, inclusive and $5,000,000 principal amount of Serial Notes due November 1, 1942 to November 1, 1945 inclusive. From the proceeds the company retired as of March 5, 1941 its First Mortgage and First Lien Bonds, Series A, 4%, due March 1, 1952, outstanding in the amount of $22,500,000, at 102 and accrued interest.

In the upper left hand corner of the chart, I have listed the present funded outstanding, according to the amount that is due on the various maturity dates. Also, maturity yields have been computed on the different maturities on the basis of the prices received by the company. It will be seen that the maturity yields on the Serial Notes varied from a low of 0.75% on the 1942 maturity to a high of 1.50% on the 1945 maturity. On the First Mortgage and First Lien, Series A Bonds, the yield varied from a low of 1.65% on the 1942 maturity to 2.30% for the 1950 maturity. The maturity yield on the First Mortgage & First Lien, Series B Bonds varied from a high of 3.11% for the 1951 maturity to a low of 3.07% which was shown for the maturities of 1958, 1959 and 1960.

In the upper right hand corner, I have portrayed the schedule of debt retirement. For the nine year period through 1942-1950, both inclusive, debt retirement will amount to $1,250,000 annually, representing the retirement of the Serial Notes through 1945 and the First Mortgage and First Lien Series A Bonds for the remainder of the period. Thereafter, through 1960, the annual retirement of the First Mortgage and First Lien Bonds will amount to $1,200,000.

Thus, as shown in the schedule of outstanding debt in the lower left hand corner, a propressive downward trend will be witnessed and by 1960, the entire debt now outstanding in the amount of $23,250,000 will be eliminated.

The general effect of the 1941 refinancing was to lower the interest rate on the company's long term debt. As shown in the lower right hand corner, the average annual interest cost of debt averages 2.74%. In addition to the lowering of interest, the refinancing extended the final maturity of debt to twenty years, and changed sinking fund provisions so as to make available added amounts of cash over the next few years.

[fol. 13579] Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Co.—1937-1941

In Chart No. 18, captioned "Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Co. —1937-1941," the percent costs of Panhandle's two classes of preferred stock are shown.

Class A stock participates with the common in any further distribution after the common stock has received $1.50 per share. Both Class A and Class B are entitled to a $6 cumulative dividend.

In 1937 the percent cost is shown at 6%. The rate increases in 1938 and 1939 to 7.66% and 9.67% respectively. This increase is due to participation dividends being paid on the Class A preferred stock. The rate shown for 1940 is again 6%.

For the year 1941 we have estimated that a $2.50 total dividend will be paid on the common stock and on this basis the costs of the preferred stocks would be 8.45%.

The weighted average for the entire period 1937 to 1941 both inclusive, giving weight to recency of figures was 8.02%.

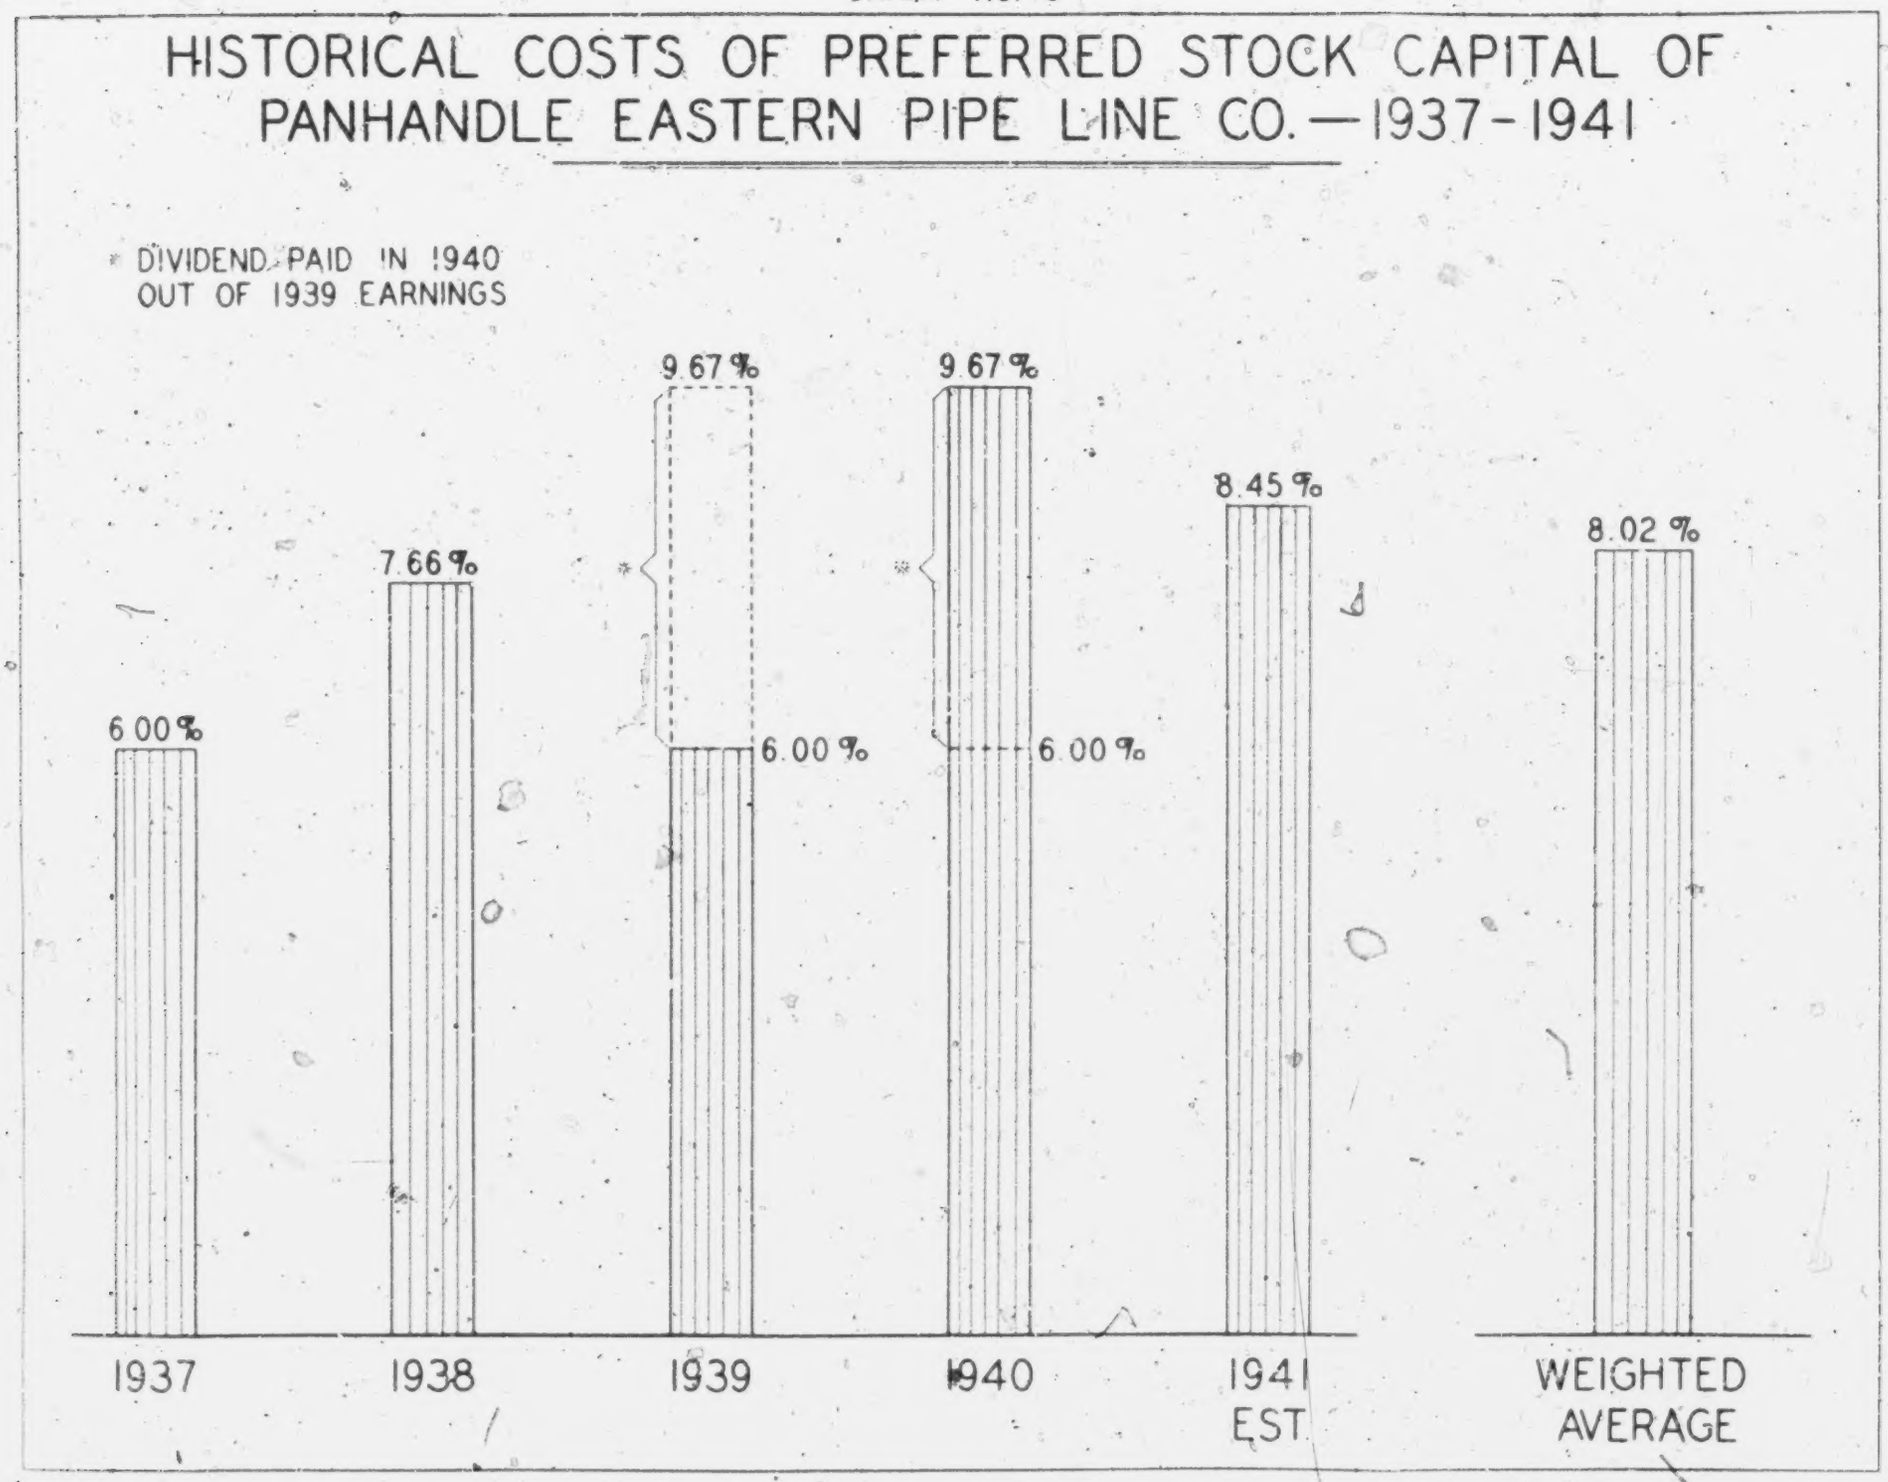
HISTORICAL COSTS OF PREFERRED STOCK CAPITAL OF PANHANDLE EASTERN PIPE LINE CO. — 1937-1941



fol. 13581] Earnings—Price Ratios of Natural Gas Pipe Line Common Stocks—1937-1940

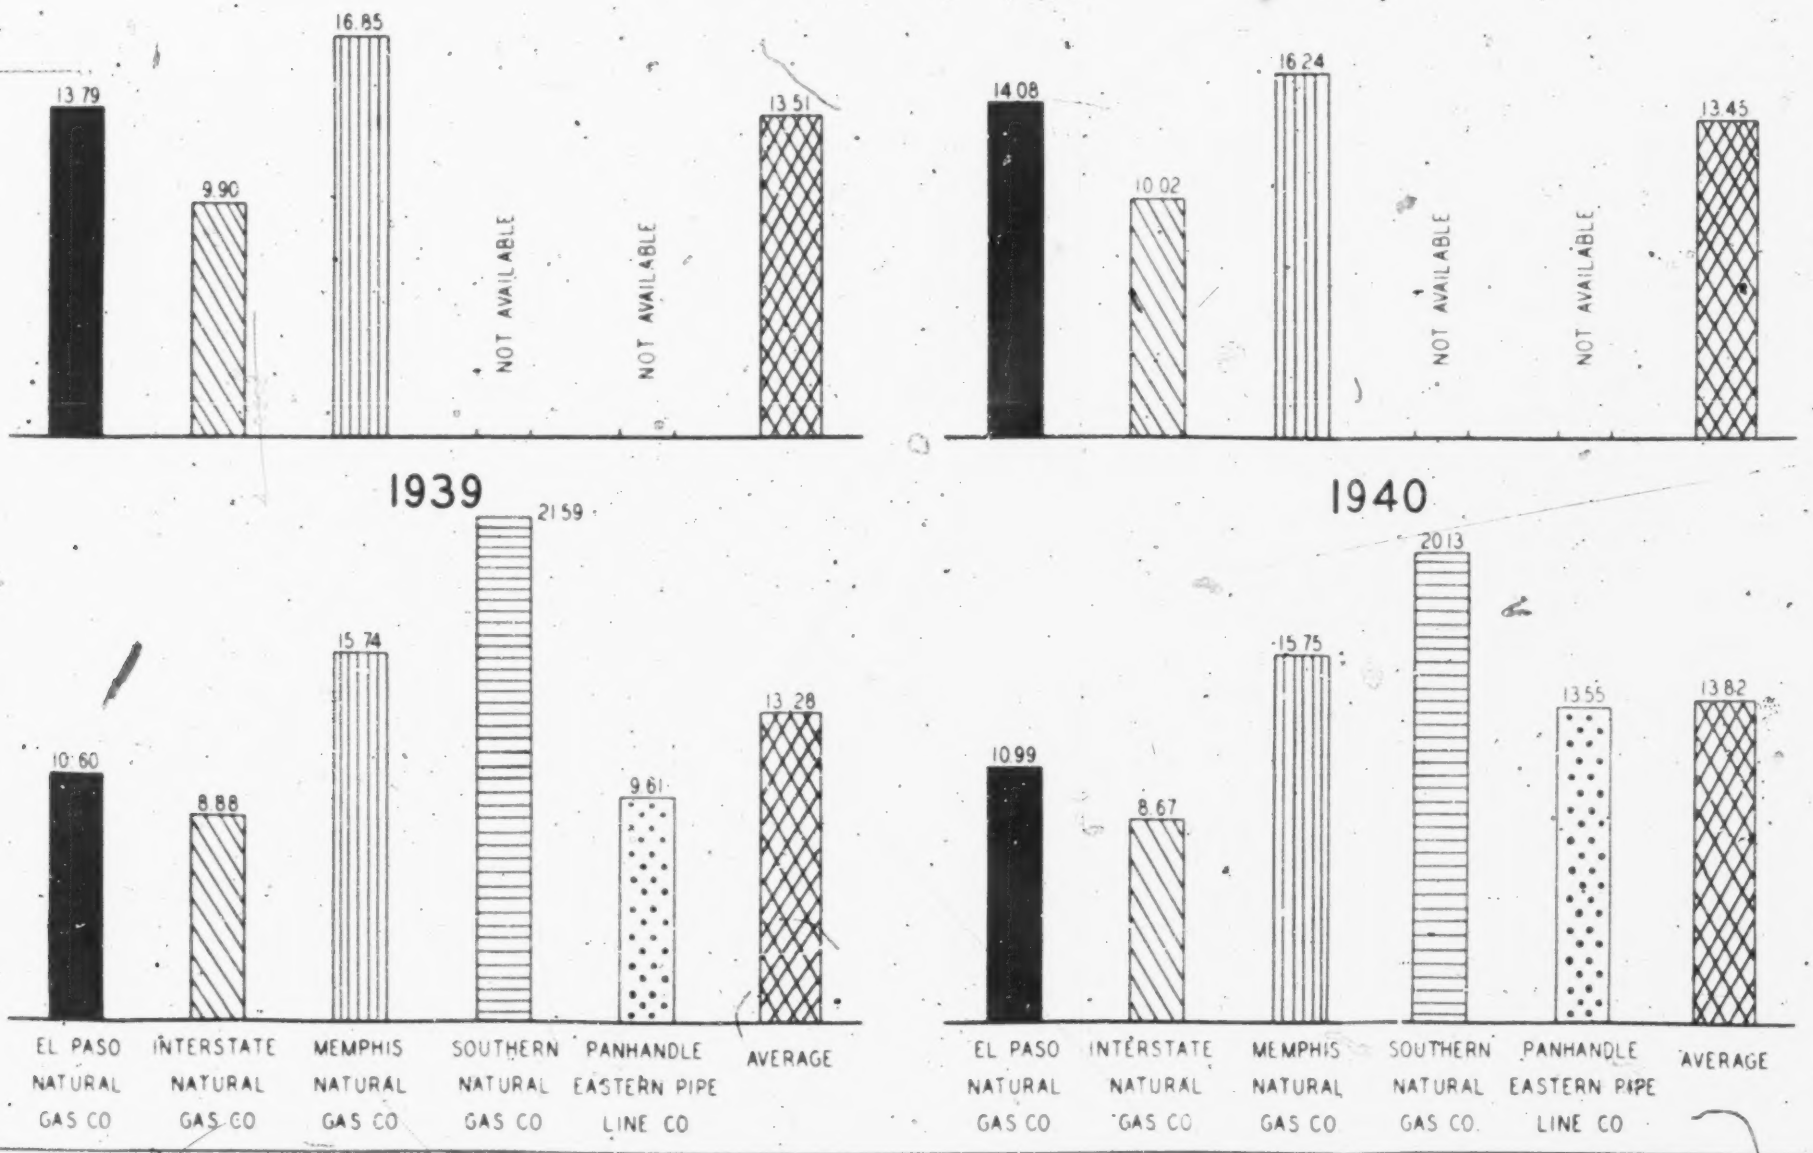
In Chart No. 19, captioned "Earnings—Price Ratios of Natural Gas Pipe Line Common Stocks—1937-1940," a comparison of the earnings-price ratios of various companies are shown. In 1937 and 1938 these companies were El Paso Natural Gas Company, Interstate Natural Gas Company, Memphis Natural Gas Company. In 1939 and 1940 Southern Natural Gas Company and Panhandle Eastern Pipe Line Company have been added to this group.

The ratios of the individual companies show a wide spread in each year while the average of all the company's remains constant.

No common stock of Panhandle Eastern was held by the public prior to September, 1939. For the year 1940 Panhandle Eastern's ratio of 13.55 compares with the average of 13.82 for all the companies.

- CHART NO. 19 -

EARNINGS – PRICE RATIOS OF NATURAL GAS PIPE LINE COMMON STOCKS – 1937-1940



[fol. 13583] Current Earnings—Price Ratios of Natural Gas Pipe Line Common Stocks

In Chart No. 20, captioned "Current Earnings—Price Ratios of Natural Gas Pipe Line Common Stocks," the four boxes show earnings per share, average market price —Jan. 1 to August 31, 1941, earnings—price ratio, and % of earnings available for common stock of Panhandle Eastern compared with four natural gas companies.

The upper left hand box shows Panhandle's earnings of $4.21 per share for the 12 months period ended June 30, 1941 compared with the earnings of $3.61 of El Paso Natural Gas Co. and $2.04 for Southern Natural Gas Co. during the same period. Interstate Natural Gas company earned $2.07 per share and Memphis Natural Gas Co. earned $0.69 during the calendar year ended December 31, 1940.

The upper right hand box compares the average market prices of these same companies for the period Jan. 1 to August 31, 1941.

Earnings—Price Ratio of Memphis Natural Gas Co. and Southern Natural Gas Co. are much higher than Panhandle, 15.10 and 17.27 as against 11.53. El Paso is approximately the same as Panhandle with 11.62 and Interstate Natural Gas Co. is considerably lower with 9.41.

The percentage of earnings available for distribution to common holders of each of the companies as shown in the lower right hand box as follows:

Interstate Natural Gas Co.	100.00%
Memphis Natural Gas Co.	91.99%
El Paso Natural Gas Co.	80.85%
Southern Natural Gas Co.	71.22%
Panhandle Eastern Pipe Line Co.	58.41%

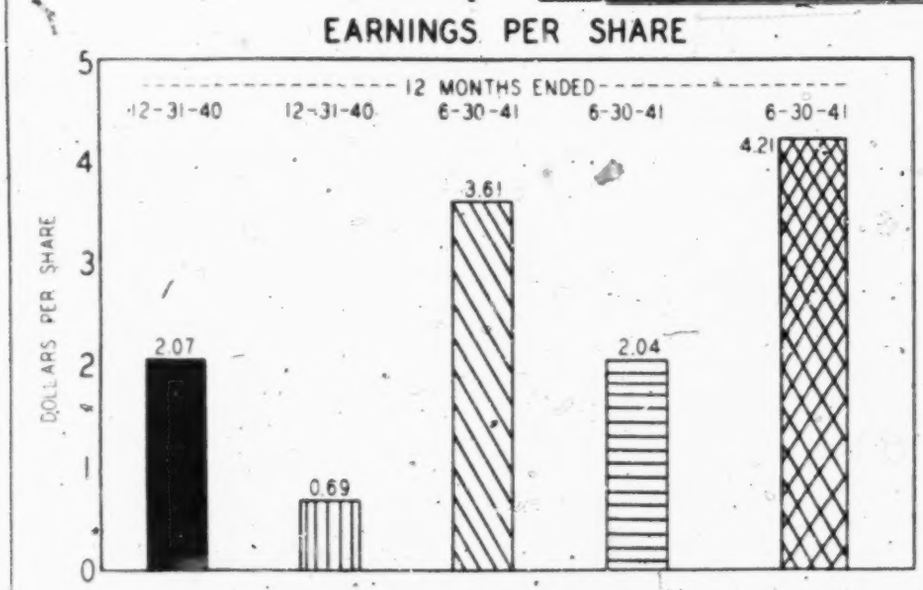
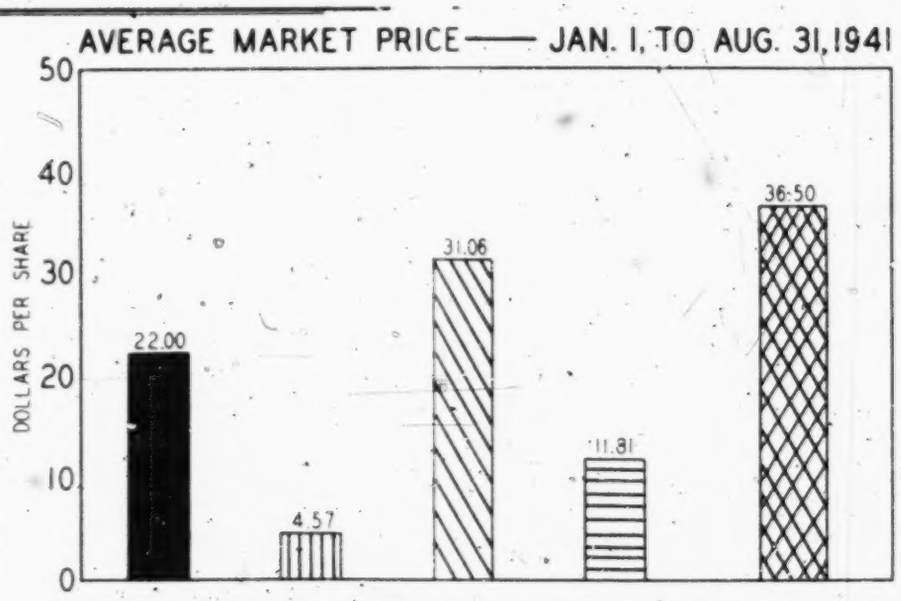
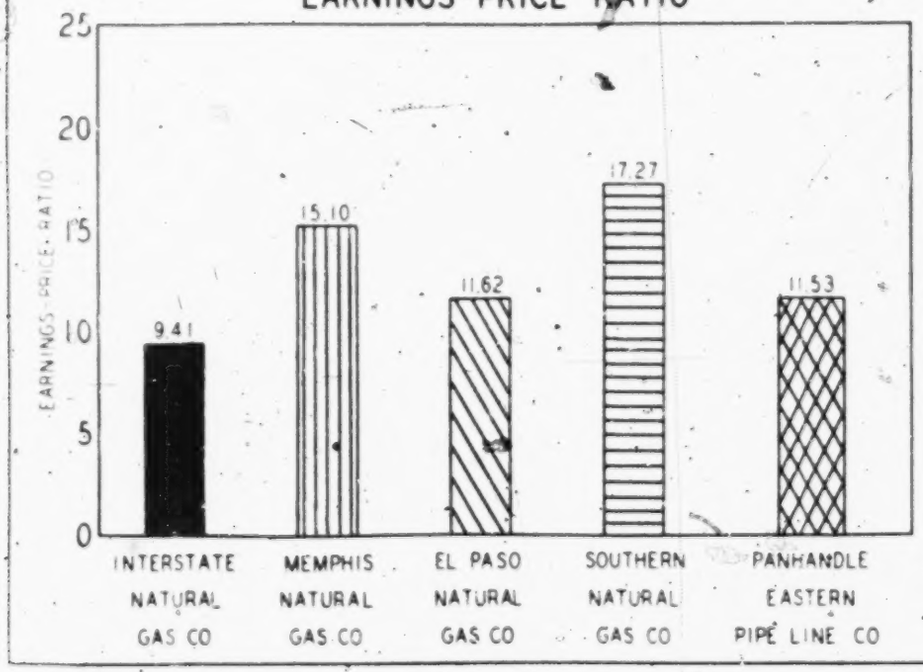
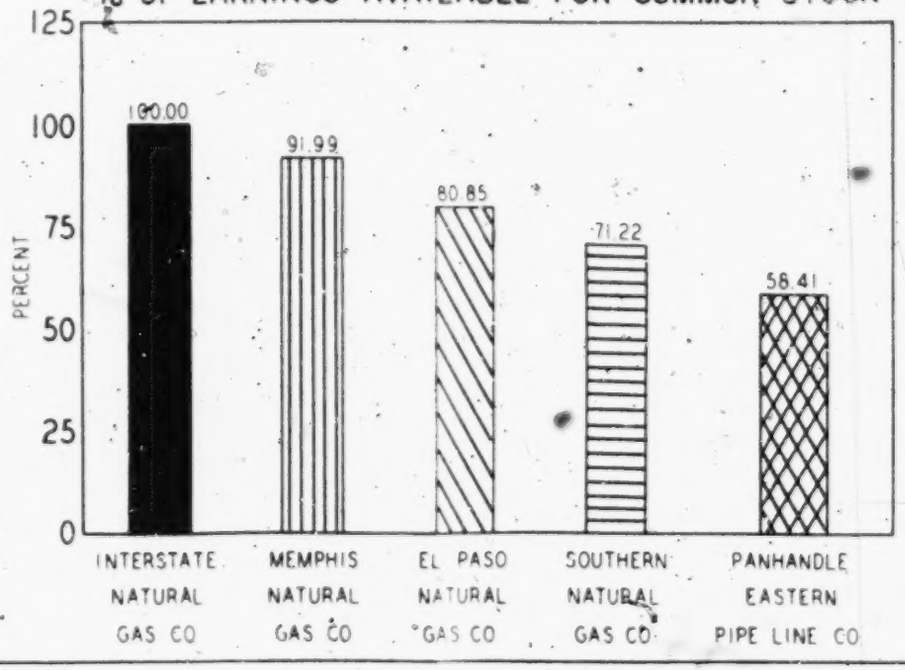
CURRENT EARNINGS - PRICE RATIOS OF NATURAL GAS PIPE LINE COMMON STOCKS









[fol. 13585] Cost of Financing Northern Natural Gas Company Common Stock—Offered to Public on September 10, 1941

In Chart No. 21 captioned "Cost of Financing Northern Natural Gas Company Common Stock—Offered to Public on September 10, 1941," the prices, commissions and expenses per share are shown in the left hand box of the chart. The earnings per share for the twelve months ended June 30, 1941, before and after adjusting for the tax increase under the Revenue Act of 1941, and the earnings-price ratio, as based on the price to the public and the net price to the seller are shown in the two boxes on the right side of the chart.

The data shown on this chart affords a concrete and typical example of costs involved in equity financing of an established natural gas pipe line company under prevailing market conditions. Also, it portrays clearly the rate of return demanded by investors on seasoned natural gas pipe line company common stocks.

On September 10, 1941, 355,250 shares of the Northern Natural Gas Company common stock, representing 35% of the total common stock outstanding, were offered to the public. As shown in the box on the left side of the chart, the price to the public (ex-dividend) was $31.40 per share. The underwriting commissions and expenses to the seller totalled $2.67 per share. Such costs represented 8.50% of the public offering price of $31.40. On the basis of the net price to the seller of $28.73 per share, the indicated current cost of financing of an established natural gas pipe line company's common stock was 9.29%.

As shown in the upper right hand box, the Northern Natural Gas Co. reported earnings of $3.68 for the twelve months ended June 30, 1941. However, such were before giving effect to the increased corporate taxes under the Revenue Act of 1941. The company estimated that increased taxes under the new law would reduce the earnings shown for the period to $3.26 per share.

In order to gauge investors' demands, the earnings-price ratio was computed both on the adjusted and unadjusted bases and on the prices to the public and to the seller.

These ratios are shown in the lower right hand box. It will be seen that, on the basis of the price to the public, a ratio of 11.72% was shown on the earnings actually reported for twelve months ended June 30, 1941. After adjusting for increased taxes, a ratio of 10.38% was shown. Based on the net price to the seller, a ratio of 12.81% was shown on the earnings before the tax adjustment and 11.35% after the tax adjustment.

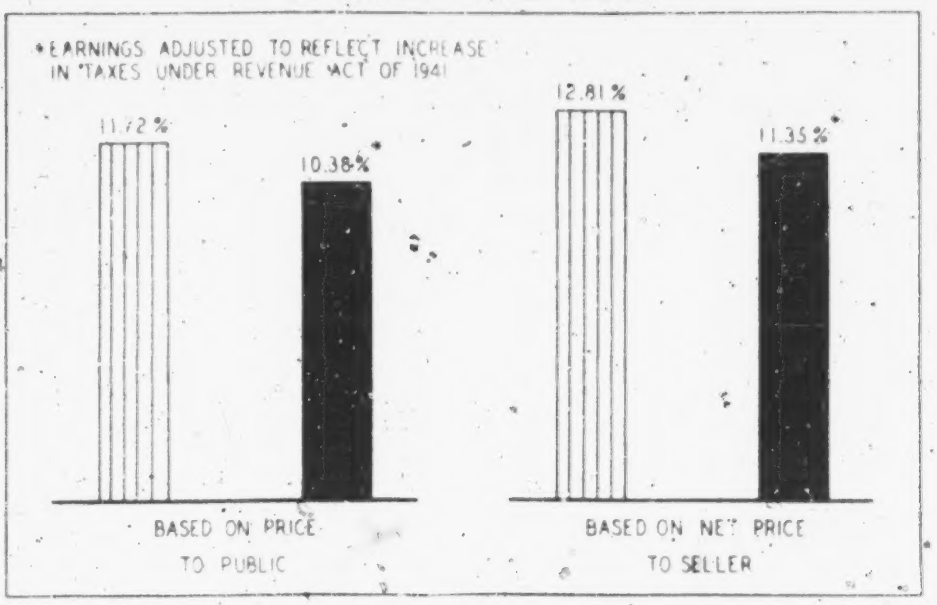
EARNINGS-PRICE RATIO



[fol. 13587] Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Co.

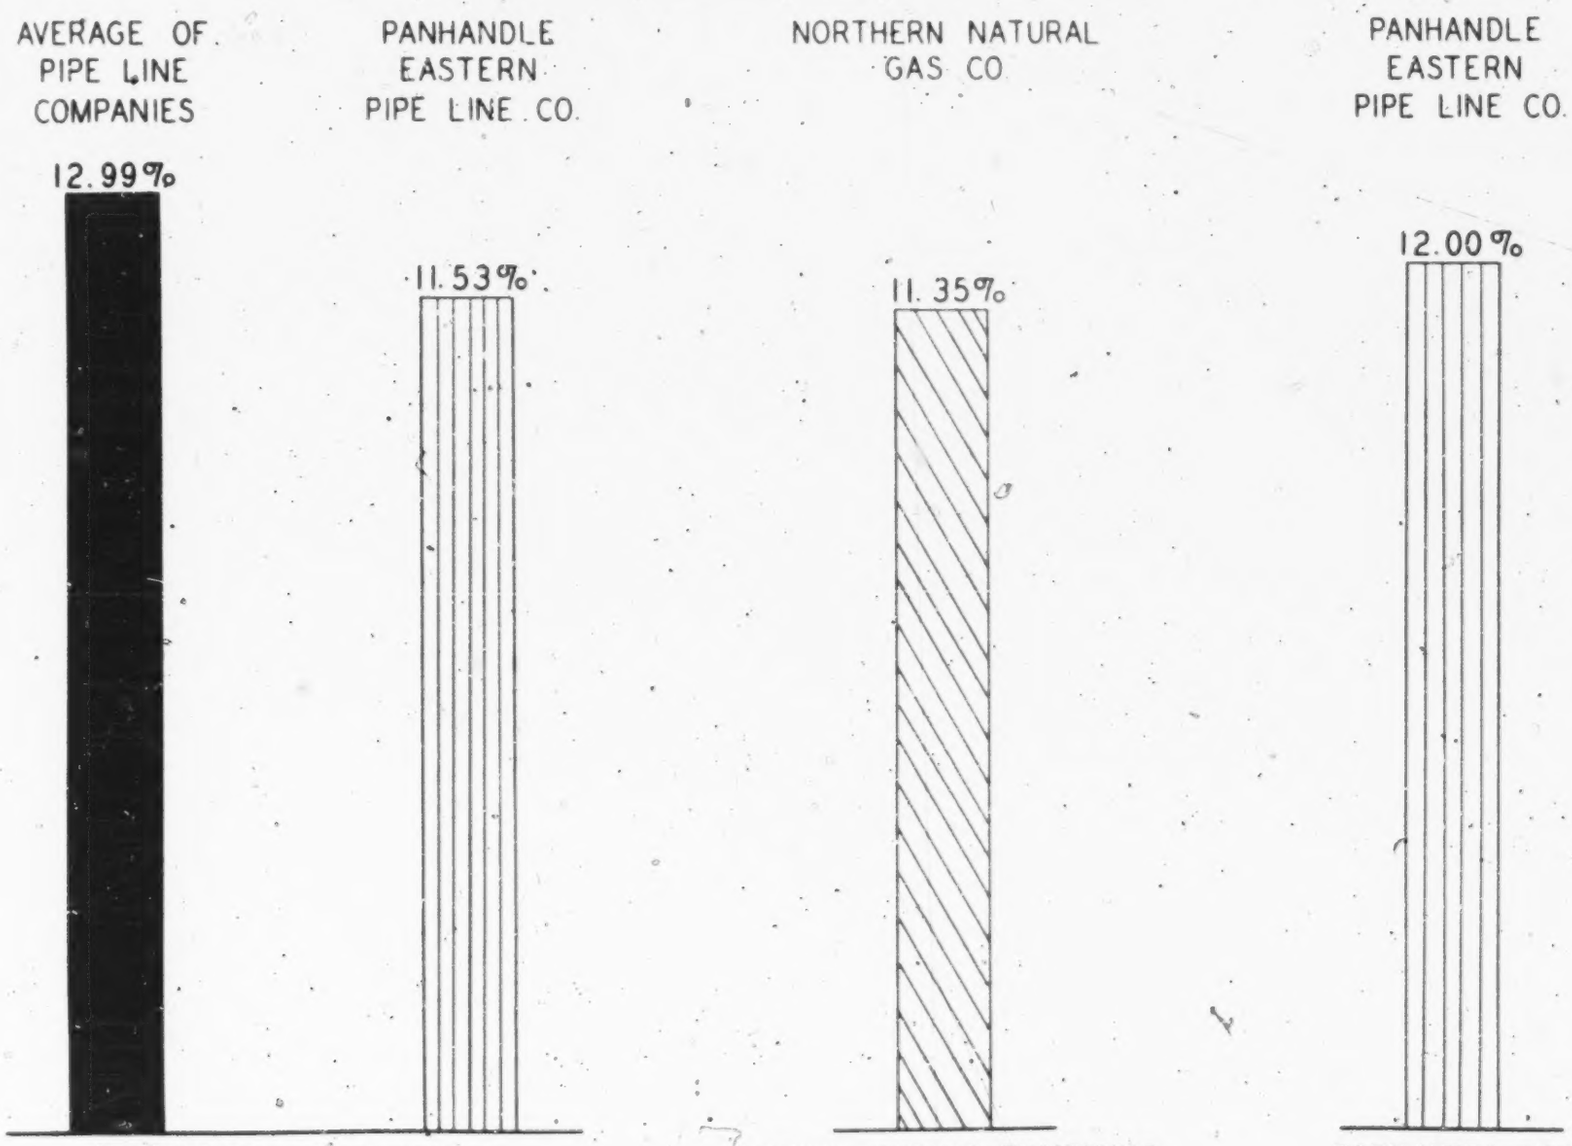
Chart No. 22, captioned "Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company" summarizes the earnings-price ratios for pipe line companies as a group, the Panhandle Eastern Pipe Line Company, and Northern Natural Gas Company for purposes of comparison in determining a rate that would be considered representative and fair so far as the current cost of new common stock financing for the Panhandle Eastern Pipe Line Company is concerned.

The green bar shows an average ratio of 12.99% for pipe line companies as a group, as based on 1941 market prices. The red bar on the left side of the chart shows an earnings-price ratio of the Panhandle Eastern Pipe Line Company of 11.53%, on the same basis. The yellow bar, which shows an earnings-price ratio of 11.35%, represents the actual current cost of common stock financing for the Northern Natural Gas Company, as based on the adjusted earnings for the twelve months ended June 30, 1941, and the net price to the seller.

After a consideration of all factors, it was concluded that 12% was a representative and fair rate of the current cost of new common stock financing for the Panhandle Eastern Pipe Line Company.

- CHART NO. 22 -

ESTIMATED CURRENT COST OF FINANCING COMMON STOCK OF PANHANDLE EASTERN PIPE LINE CO.



[fol. 13589] Continuing Growth of Panhandle System Indicates Future Needs for New Capital

In Chart No. 23, captioned "Continuing Growth of Panhandle System Indicates Future Needs for New Capital," the two upper boxes show the growth of Panhandle Eastern's transmission system from December 31, 1936 to December 31, 1940.

In the upper left hand box, the solid red bars represent the number of miles of gathering, main and lateral pipe line in the company's transmission system. Pipe line miles increased in each year, from 1,651 miles at December 31, 1936 to 2,374 miles at December 31, 1940. The largest increases were in 1937 and 1940.

In the upper right box the bars represent the installed capacity, expressed in thousand horsepower, of the compressor stations in the company's system.

Installed horsepower increased from 43,300 at December 31, 1936, to 86,100 at December 31, 1940. Again, the greatest increases were in 1937 and 1940.

The bars in the lower left box represent, in million dollars, the gross property of Panhandle Eastern at December 31 of each of the years 1936 through 1940. Gross property increased from $46,643,078 at December 31, 1936 to $64,854,956 at December 31, 1940.

The bars in the lower right box represent, in million dollars, the amount of the increase in gross property in each of the five years 1936 through 1940. As was the case with pipe line miles and installed horsepower, the largest increases were in 1937 ($11,416,937) and 1940 ($5,375,228).

In the five years, 1936 through 1940, the average annual demand for new capital, as represented by the increase in gross property, plant and equipment, was $4,500,916.

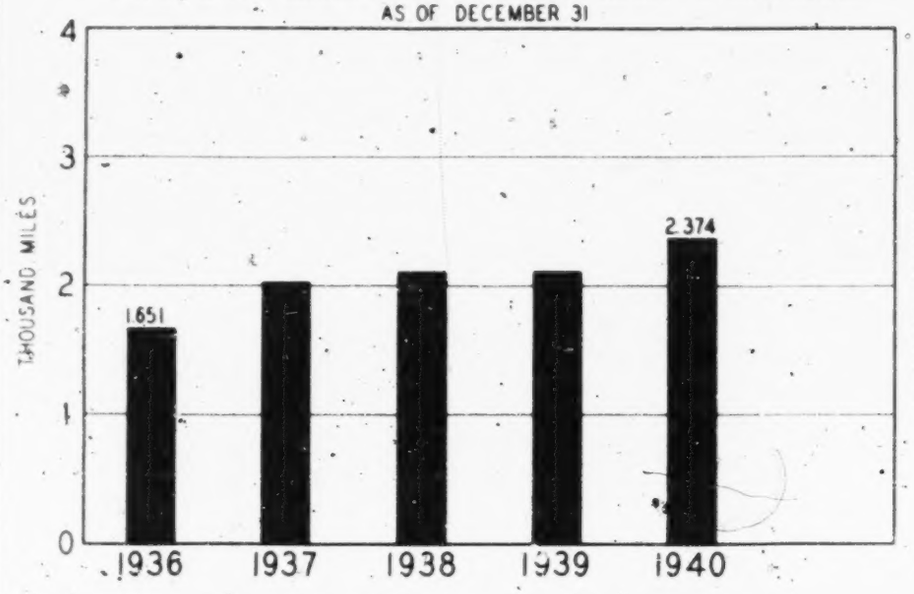
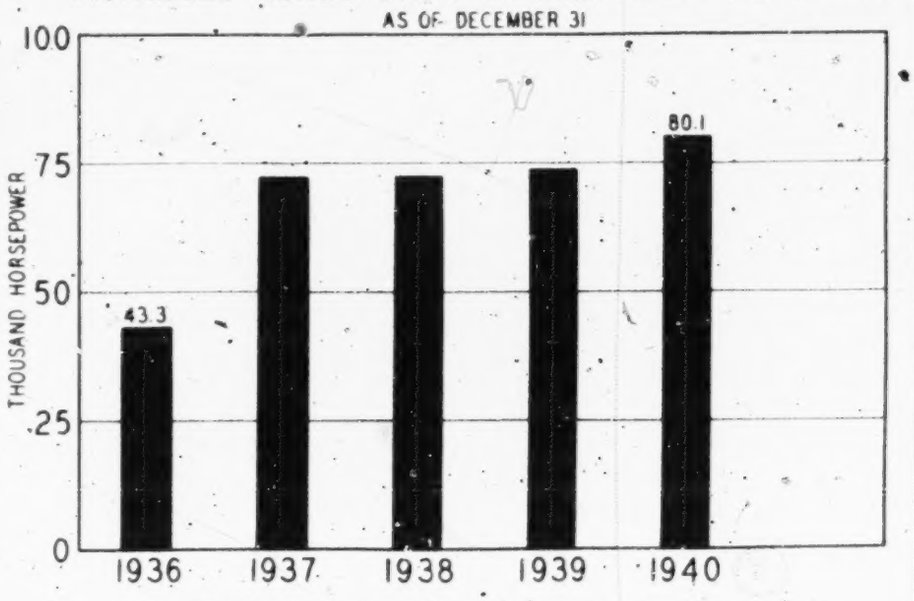
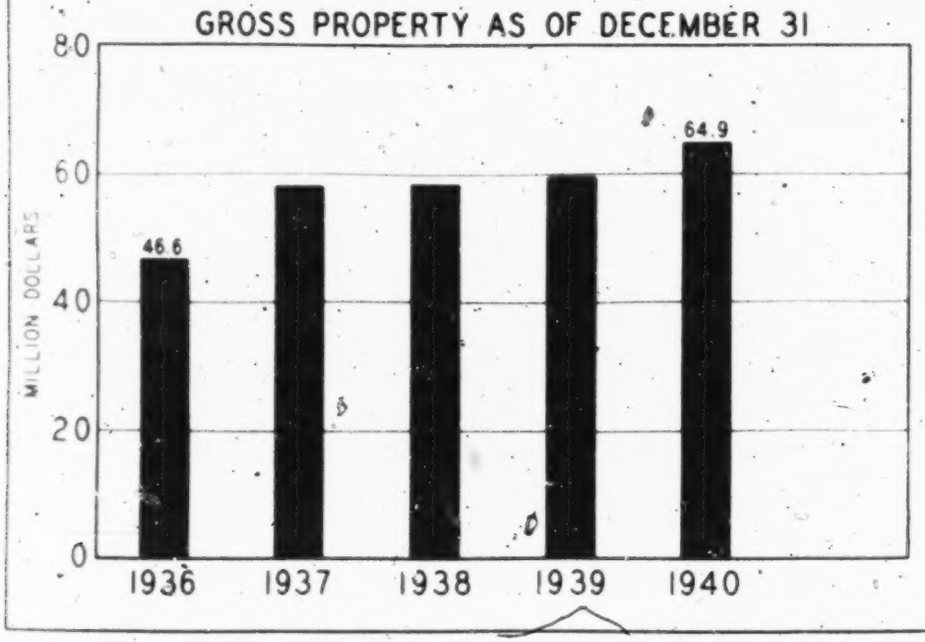
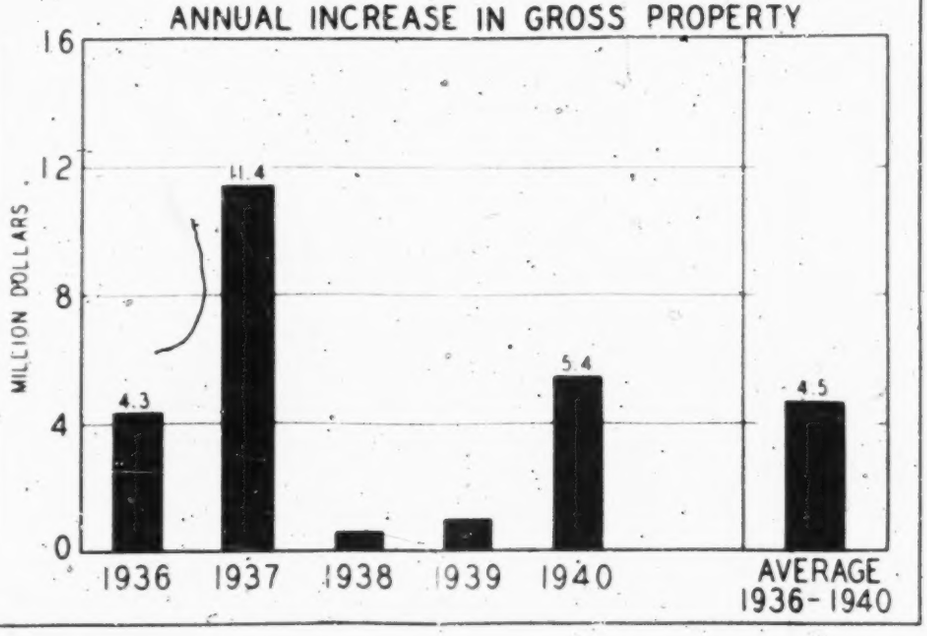
- CHART NO. 23 -

CONTINUING GROWTH OF PANHANDLE SYSTEM INDICATES FUTURE NEEDS FOR NEW CAPITAL









[fol. 13591] Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941

In Chart No. 24, captioned "Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941," the company's invested capital is shown in detail, first, on the basis of book value and second, on the basis of market value:

It will be seen that total invested capital of the company, on the basis of book value, amounted to $61,423,853 on June 30, 1941. Of this total, net long term debt, after deducting debt discount and expense, amounted to $21,165,538 or 34.46%. Preferred stock, as represented by 100,000 shares of Class A participating preferred stock, $100 par, and 10,000 shares of Class B preferred stock, par $100, accounted for $11,000,000, or 17.91% of the total. Common stock, as represented by 807,367 shares of no par value, was carried at a book value of $20,184,175. Earned surplus amounted to $9,074,120. Combined common stock and surplus of $29,258,295 represented 47.63% of the total invested capital on June 30, 1941.

Total invested capital, on the basis of market value, amounted to $64,219,240, or moderately above the stated book value. Market prices, wherever available, represent the averages of the high and low prices witnessed for the period January 1 to August 31, 1941. Actual market prices were available only on the $12,000,000 First Mortgage and First Lien "B" Bonds, due 1960 and the common stock. The average market price for the bonds for the period was 101.94, while the average market price for the common stock was 36.50. In the case of the First Mortgage and First Lien "A" Bonds, due 1946-50 and the Serial Notes, prices were estimated at 100, inasmuch as these issues were sold privately at 100 to several banking institutions and one insurance company.

The preferred stocks, which are owned by the Columbia Oil & Gasoline Corporation, were valued on the prices at which redemption of the stocks is contemplated, namely $100 for the preferred A and $125 for the preferred B stock.

The percentage relationship of the various capital obligations on the basis of market value, were only slightly different from the ratios shown on the basis of book value, due the proximity of market values to book values. As shown, the market value of long term debt amounted to $23,500,344, or 36.50% of the total invested capital. The value of the preferred stocks, at redemption prices amounted to $11,250,000 or 17.52% of the total, while common stock and surplus of $29,468,896 accounted for 45.89% of the total.

[fol. 13593] Preferred Stock Unusual in Natural Gas Pipe Line Companies

In Chart No. 25, captioned "Preferred Stock Unusual in Natural Gas Pipe Line Companies," the solid bars represent the percent (based on book figures as of December 31, 1940) borne by the preferred stock of each of eight natural gas pipe line companies to the total book value of invested capital (net debt, preferred stock, common stock and surplus) of the respective companies.

As can be seen from the chart, Panhandle Eastern Pipe Line Company, with the exception of El Paso Natural Gas Company, is the only one of the companies which has preferred stock outstanding. The 14,797 shares of preferred stock of El Paso, representing only 6.85% of total capitalization at December 31, 1940, are a carry-over from the company's original financing, and judging by quoted market price could easily be refunded if the issue were of such size to make such a program feasible.

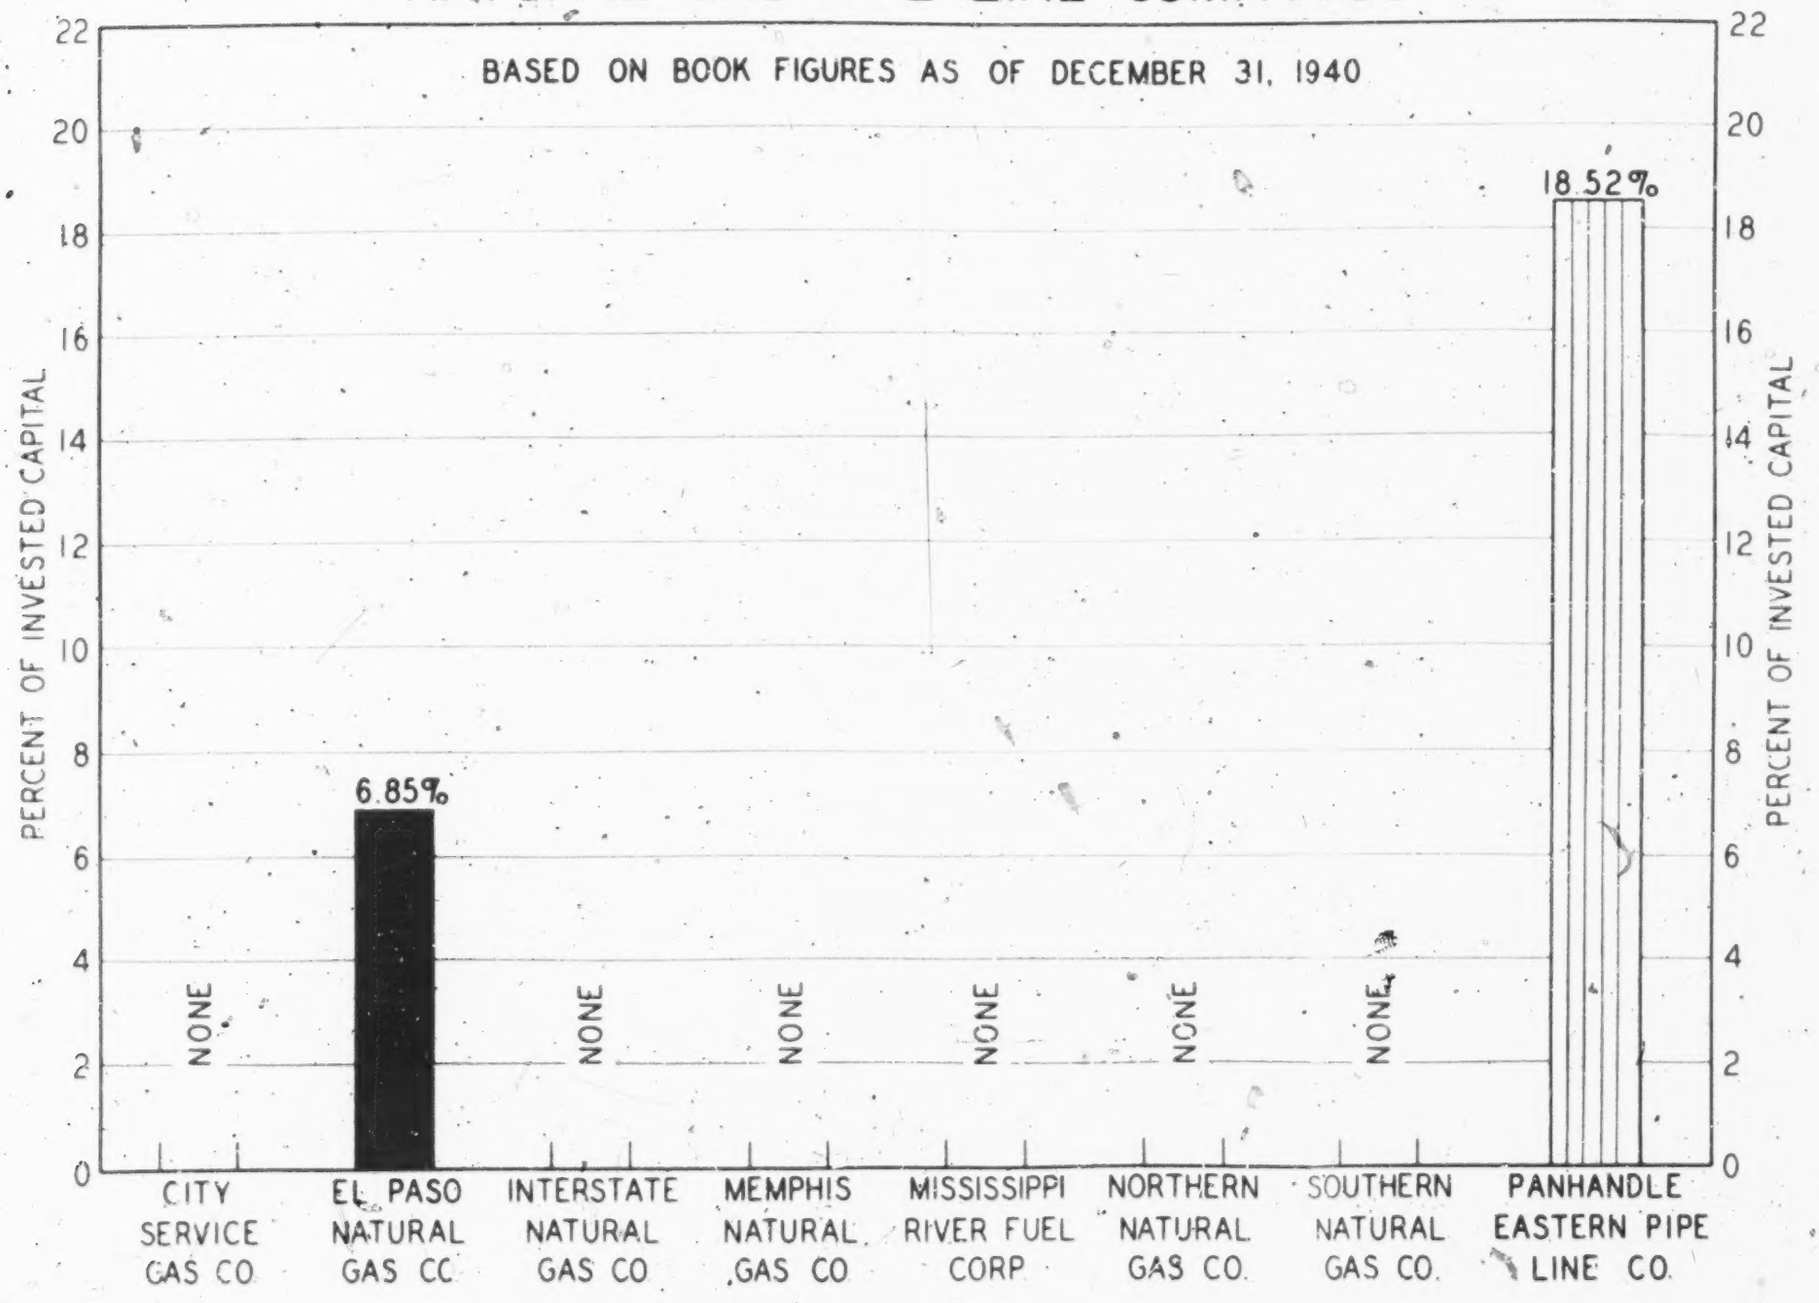
The proportion of Panhandle Eastern's total capitalization made up of preferred stock at December 31, 1940 was 18.52%.

The significance attached to this chart, in my opinion, is that a preferred stock is difficult to justify in the capital structure of a natural gas pipe line company, or, for that matter, the capital structure of any company connected with a wasting industry in which the product sold will ultimately be exhausted.

EXHIBIT 65 4628

– CHART NO. 25 –

PREFERRED STOCK UNUSUAL IN NATURAL GAS PIPE LINE COMPANIES



[fol. 13595] Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Co.

In Chart No. 26, captioned "Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Co.," I show the amount of earnings required to maintain quality of the company's presently outstanding securities.

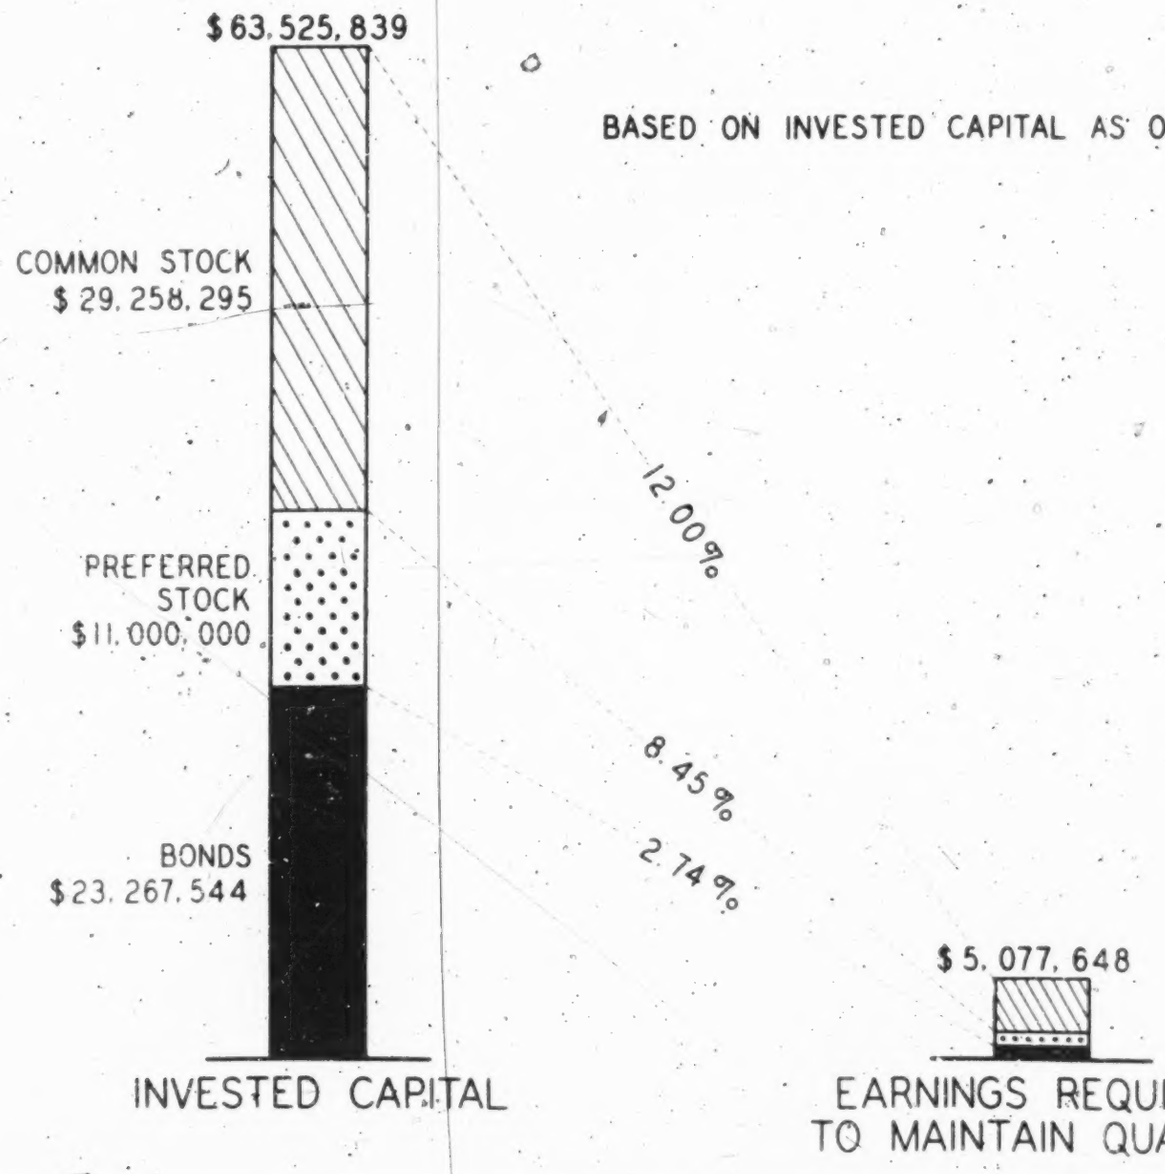
The bar on the left side of the chart shows in detail the total invested capital of the company on June 30, 1941. The solid red portion of the bar represents the total amount of long term debt outstanding, or $23,267,544. The dotted portion represents the preferred stock outstanding in the amount of $11,000,000, while the diagonally lined portion represents the common stock equity of $29,258,295. Total invested capital, it will be seen, amounted to $63,525,839.

In the center of the chart are shown the rates that were used in computing the earnings required to maintain the quality on the various components of invested capital. In the case of the bonds, a rate of 2.74% was used, which rate represents the average annual cost of senior capital raised in the 1941 refinancing. The rate of 8.45% used in the case of the preferred stock was based on the annual dividend requirements on the Class A and B issues, the former being computed on the basis of the regular $6 dividend plus a participation of $2.50 per share, and the latter being taken at the regular $6 annual dividend. In the case of the common stock, the rate of 12% was used, which rate was considered representative of the cost of common stock financing for an established natural gas pipe line company.

The bar on the right hand side of the chart shows the earnings required to maintain the quality of capital securities outstanding, as computed on the book value of invested capital and the rates mentioned above. For the bonds, the 2.74% rate figures out at the amount of $637,531 needed to maintain service charges on this portion of invested capital. The earnings required to meet the dividend requirements on the preferred A and B stocks amounted to $929,122, while on the common stock equity, earnings of $3,510,995 were required to cover the indicated 12% rate on this type of capital. Thus, earnings necessary to maintain credit position of the Panhandle Eastern Pipe Line Company, on the basis of the presently outstanding securities, amounted to $5,077,648.

- CHART NO. 26 -

EARNINGS NECESSARY TO MAINTAIN CREDIT POSITION OF PANHANDLE EASTERN PIPE LINE CO.



[fol. 13597] Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Co.

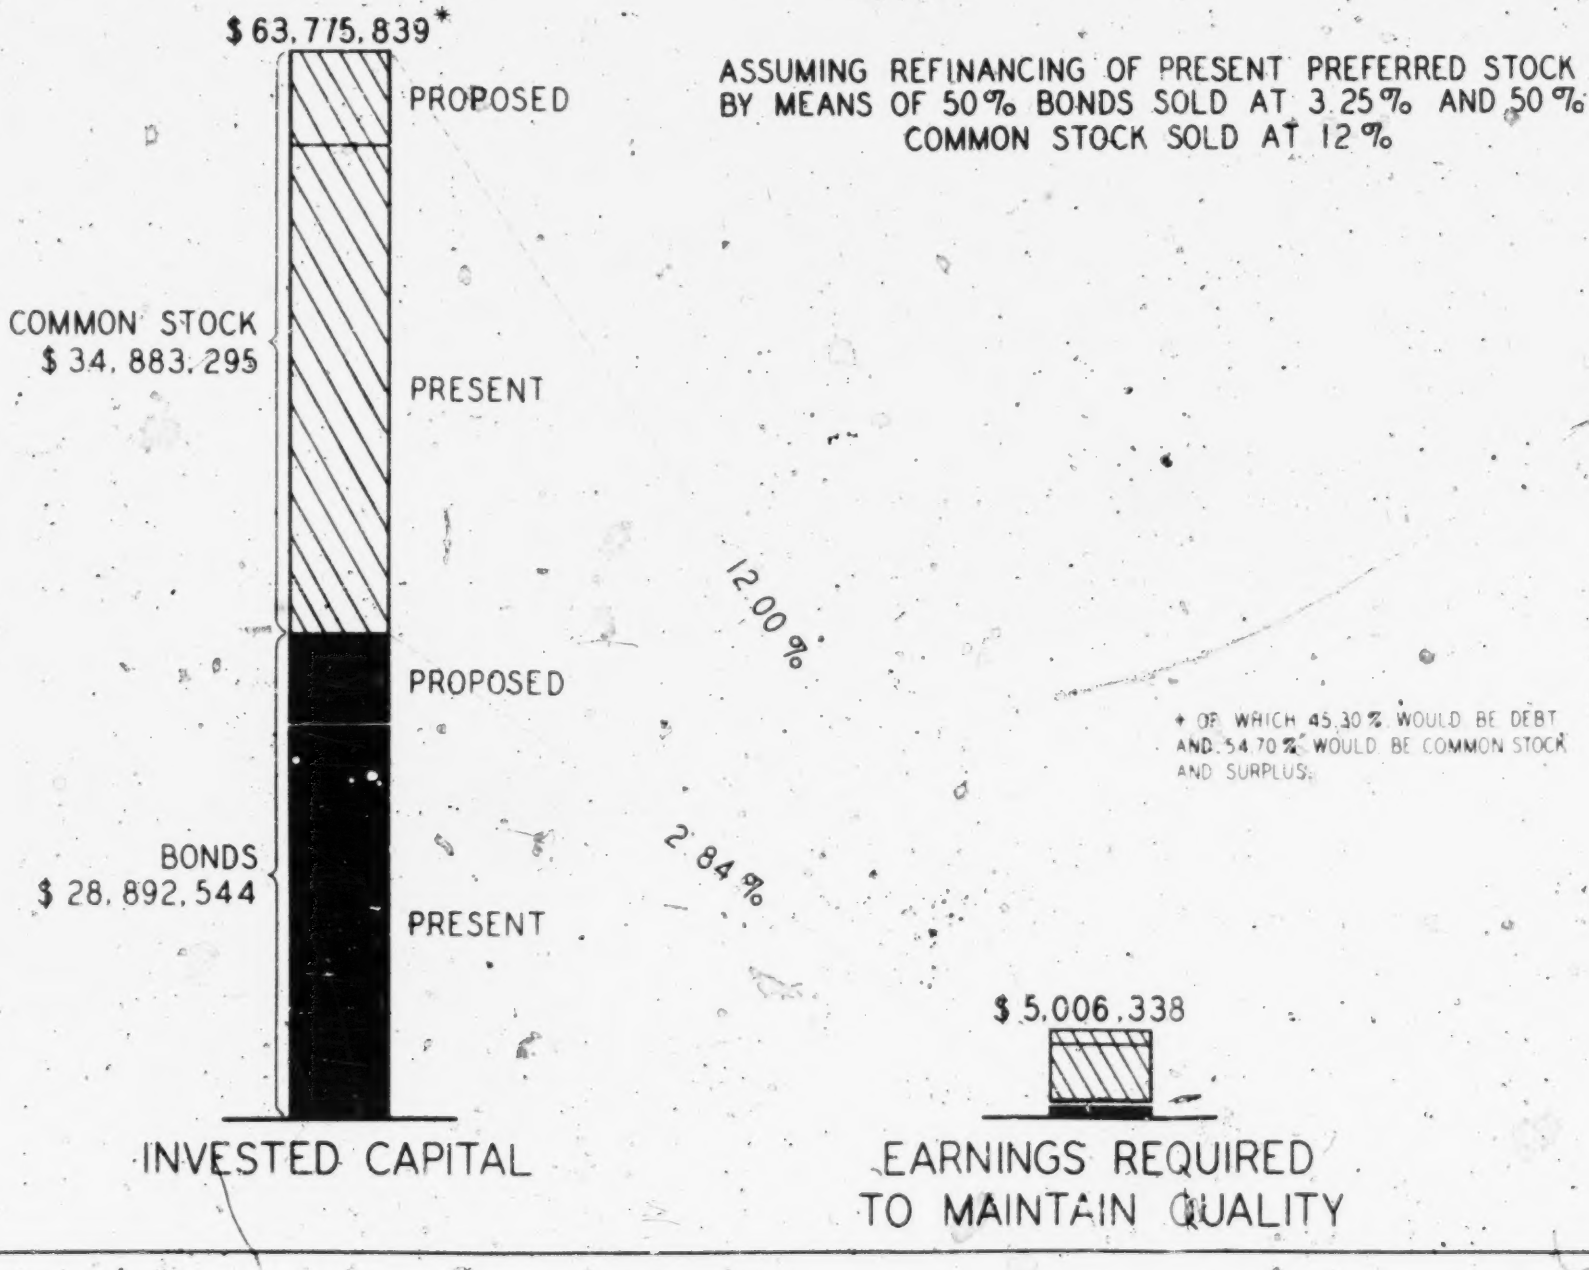
In Chart No. 27, captioned "Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Co.," the tall bar at the left represents the total capitalization of Panhandle Eastern (assuming that the present preferred stock is refinanced 50% by means of bonds sold to yield 3.25% and 50% by means of common stock sold on a 12% earnings-price ratio). The short bar at the right represents earnings required to maintain the credit position of Panhandle Eastern.

Of the total proposed capitalization of $63,775,839, bonds represented by the solid red portion of the bar, would be $28,892,544 and would require, at an overall rate of 2.84%, $820,343 annually. Common stock, represented by the diagonally lined portion of the bar, would be $34,883,295 and would require, at an earnings-price ratio of 12%, $4,185,995. The total annual earnings requirement, therefore would be $5,005,338 to maintain the credit position of Panhandle Eastern Pipe Line Company.

The computation of overall yield rates and proposed capitalization appear in the Appendix on the sheet marked "Table for Chart No. 27."

- CHART NO. 27 -

EARNINGS NECESSARY TO MAINTAIN CREDIT POSITION OF PANHANDLE EASTERN PIPE LINE CO.



ASSUMING REFINANCING OF PRESENT PREFERRED STOCK BY MEANS OF 50% BONDS SOLD AT 3.25% AND 50% COMMON STOCK SOLD AT 12%

* OF WHICH 45.30% WOULD BE DEBT AND 54.70% WOULD BE COMMON STOCK AND SURPLUS.

[fol. 13599] Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure

In Chart No. 28, captioned "Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure," I show the overall cost of capital to the company, as based on a so-called ideal capital structure, composed of 40% bonds and 60% common stock.

In arriving at an ideal capital structure for the Panhandle Eastern Pipe Line Company I eliminated preferred stock entirely on the basis that such type of security is not a particularly good medium with which to finance natural gas pipe line companies. By the very nature of their operations, natural gas pipe lines must be placed in the category of wasting assets. Although a preferred issue which carried a sinking fund feature might be justified, such a security would more or less have the characteristics of a bond.

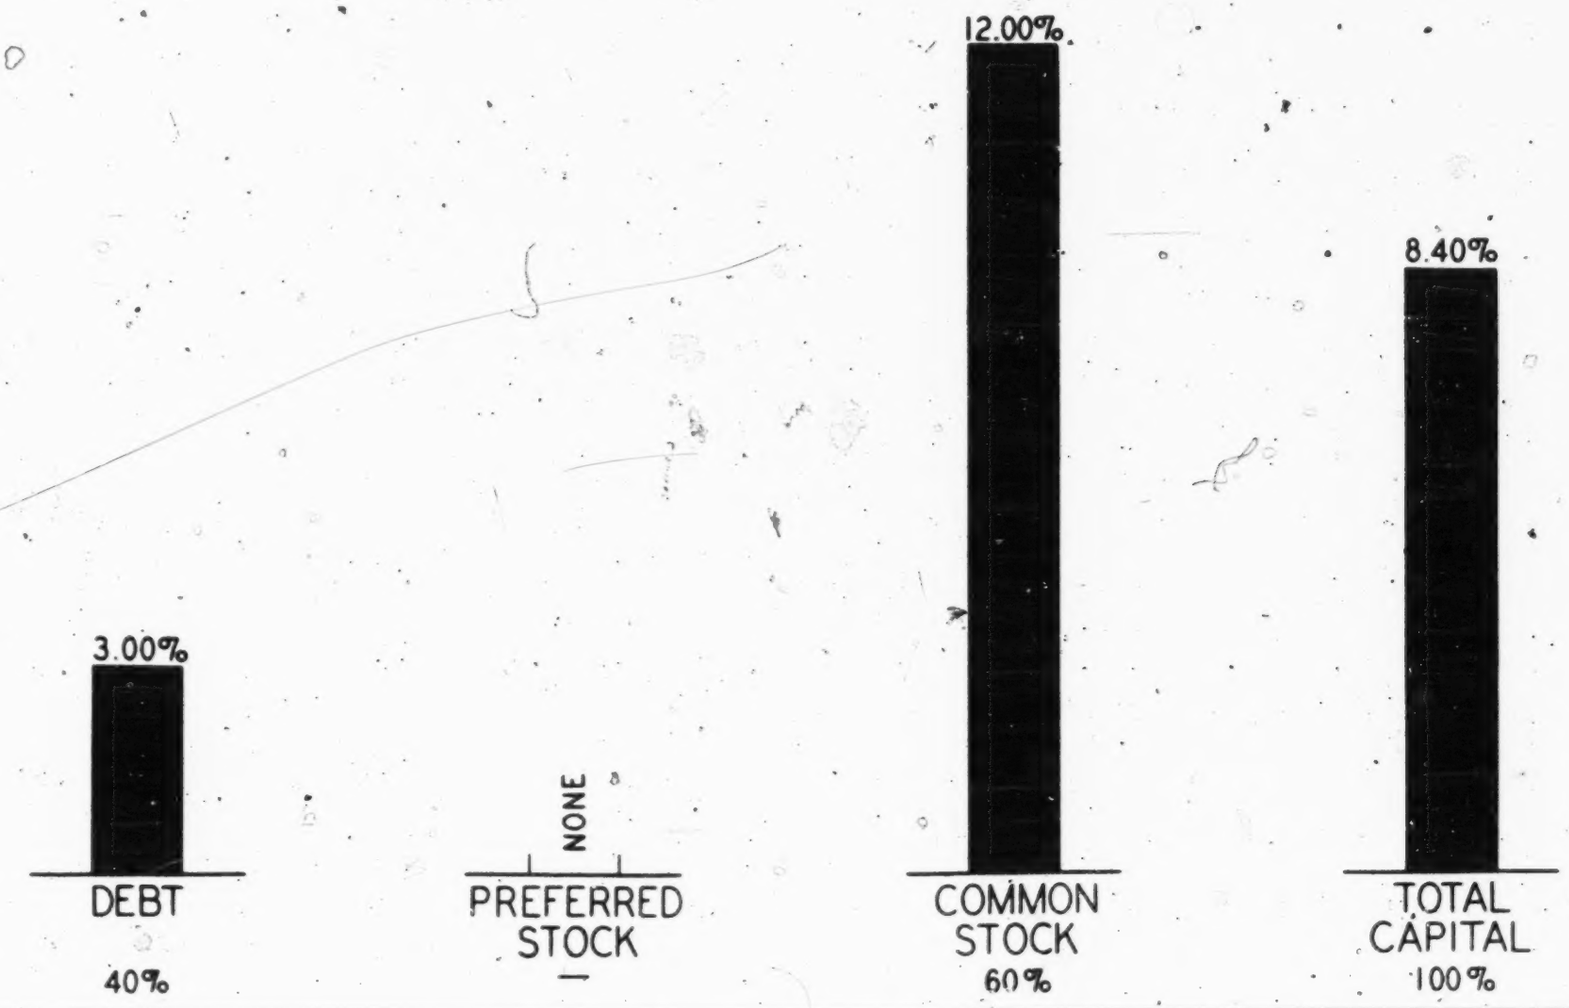
Under this ideal capital structure of 40% bonds and 60% common stock I have concluded, after a careful study of all pertinent factors, that the company could issue bonds on a 3.00% basis. This rate is indicated by the bar on the left side of the chart. In the case of the common stock, the cost of financing has been placed at 12.00%.

On the basis of such a capital structure, and the above financing costs, the overall cost of capital to the Panhandle Eastern Pipe Line Company would be 8.40%.

- CHART NO. 28 -

OVERALL COST OF CAPITAL TO PANHANDLE EASTERN BASED ON IDEAL CAPITAL STRUCTURE

CAPITAL STRUCTURE COMPOSED OF
40% BONDS & 60% COMMON STOCK



[fol. 13601] Dollars Needed Annually by Panhandle For Operations & Maintenance

Having determined the dollar earnings on invested capital necessary to maintain the credit position of Panhandle Eastern Pipe Line Company and the overall cost of capital based upon an ideal capital structure of 40% bonds and 60% common stock, I next proceeded to determine the irreducible minimum annual gross revenue that would be necessary over the next few years, in the light of current and prospective business conditions, to operate the pipe line and provide efficient and adequate service to customers, a reasonable return to investors, and to restore invested capital when the gas reserves of the company were exhausted.

In Chart No. 29, captioned "Dollars Needed Annually by Panhandle for Operations & Maintenance," the bar at the left shows the actual expenditures made during the 12 months ended June 30, 1941 for operations and maintenance and the bar on the right shows my projected estimate as to the minimum amount that will be needed for such expenditures over the next few years, based on cost trends that are rather clearly evident at the present time.

As shown in the left hand bar, actual cost of operations was $2,902,353 and of maintenance, $294,444, in the 12 months ended June 30, 1941. Included in the first figure were such items as the cost of gas produced and purchased, the wage and material costs necessary to operate the pipe line system, and the general overhead comprised of office salaries and other expenses. The maintenance figure includes the cost of wages and materials necessary to maintain the pipe line, the compressor stations and all other physical equipment.

While I gave careful consideration to the various items of expense pertaining to a company such as Panhandle Eastern Pipe Line Company, I did not actually examine the detailed records of the company nor did I attempt to project the amount of dollars that would be needed annually in the next few years for each individual item of expense. However, from a general knowledge of trends of raw material costs and wage rates, and realizing fully the

seriousness of the problem of precluding a serious inflation in this country during the next two years, I estimated that the minimum amount of dollars necessary to operate and maintain the Panhandle Eastern Pipe Line Company over the next year or so would average at least 10% higher than the actual expenses incurred in the twelve months ended June 30, 1941.

On such basis, it was determined that the company would need annually $3,192,000 for operations and $324,000 for maintenance, or a total of $3,516,000 for such costs over a reasonable period in the future. I feel quite strongly that if this estimate ultimately proves in error, the error will be toward understatement of future costs rather than overstatement.

EXHIBIT 65

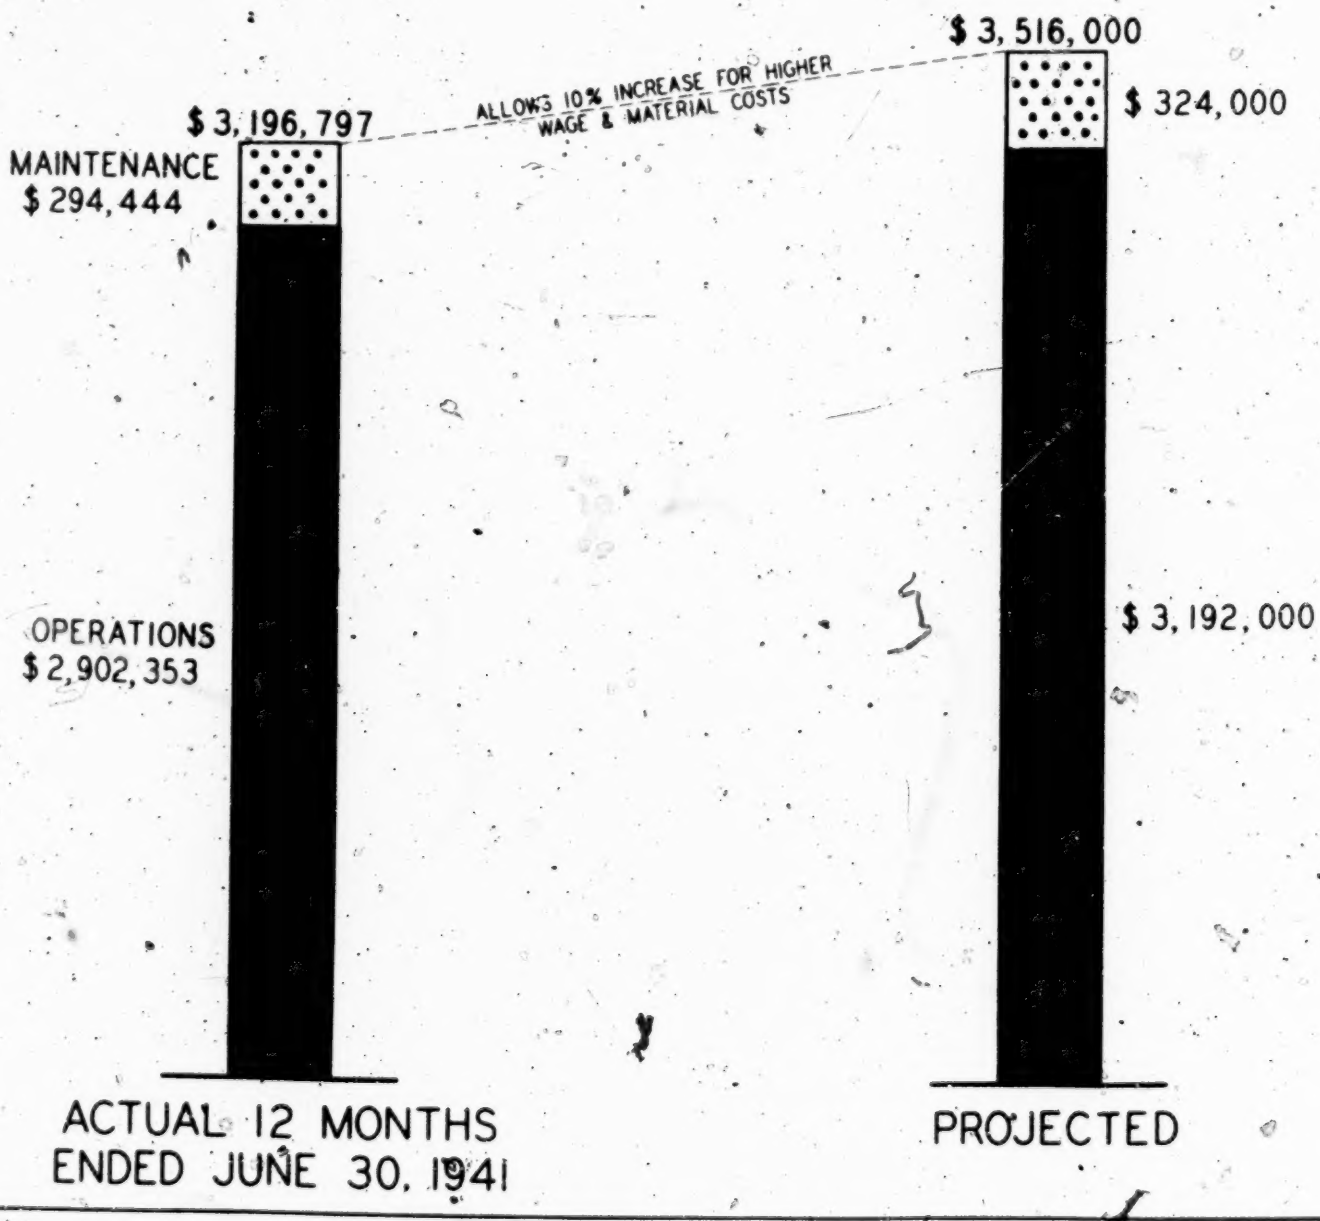
- CHART NO. 29 -

DOLLARS NEEDED ANNUALLY BY PANHANDLE FOR OPERATIONS & MAINTENANCE



[fol. 13603] **Dollars Needed Annually by Panhandle for Taxes**

In Chart No. 30, captioned, "Dollars Needed Annually by Panhandle for Taxes," the left hand bar represents the amount of taxes shown in the report of the company for the 12 months ended June 30, 1941, and the right hand bar shows a reasonable projection of the amount that will be payable by the company on average over the next few years.

In the report for the 12 months ended June 30, 1941 as published by the company, State, local and miscellaneous Federal taxes were deducted in the amount of $649,017, and Federal income and excess profits taxes were deducted in the amount of $2,359,000. As was clearly indicated, this latter amount was "computed without regard to special taxes resulting from the refinancing consummated during February, 1941, and without making provision for possible increases in rates or otherwise during 1941." In other words, such taxes were computed at the rates prescribed in the "Second Revenue Act of 1940."

As is well known, however, this Act is now a matter of history and has been superseded by the "Revenue Act of 1941," which establishes, among other things, considerably higher tax rates for corporations. On the basis of such rates, an amount of income which was actually earned in the 12 months ended June 30, 1941, I have computed that the company's tax liability for Federal income, surtax and excess profits tax would be slightly more than $1,000,000 higher than the amount shown in the report for that period, or a total of $3,363,000, as shown in the right hand bar of the accompanying chart. Moreover, as is generally anticipated, the tax rates established in the Revenue Act of 1941 are likely to be increased again in 1942 in order to finance the unsual expenditures of the present war efforts. In order to give some weight to such additional tax prospects, I have assumed a further 10% increase in Federal taxes in 1942, or an increase of $336,000. I have also allowed for a modest increase in the capital stock and other miscellaneous taxes from $649,017 as actually incurred in the 12 months ended June 30, 1941 to $700,000 as a reasonable estimate of future needs.

In total, therefore, I arrived at the figure of $4,399,000 as being a minimum estimate of the annual needs of the Panhandle Eastern Pipe Line Company for taxes over a reasonable period in the future. This estimate is, of course, considerably in excess of the $3,008,117 of total taxes computed in the report for the 12 months ended June 30, 1941.

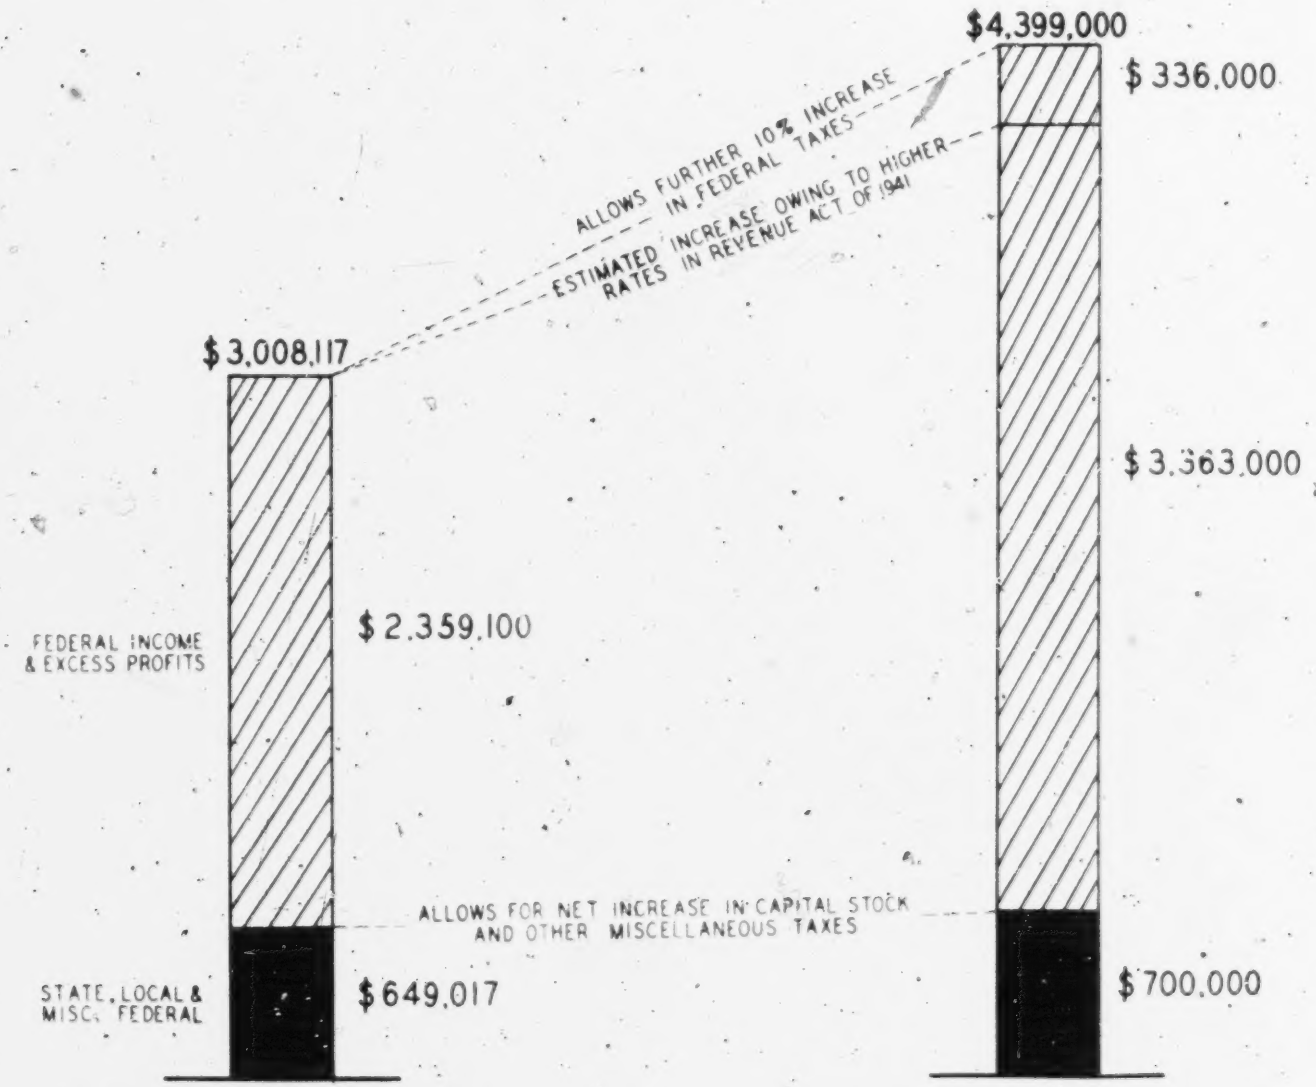
DOLLARS NEEDED ANNUALLY BY PANHANDLE FOR TAXES



[fol. 13605] Dollars Needed Annually by Panhandle to Return Capital to Investors When Gas Reserves Are Exhausted.

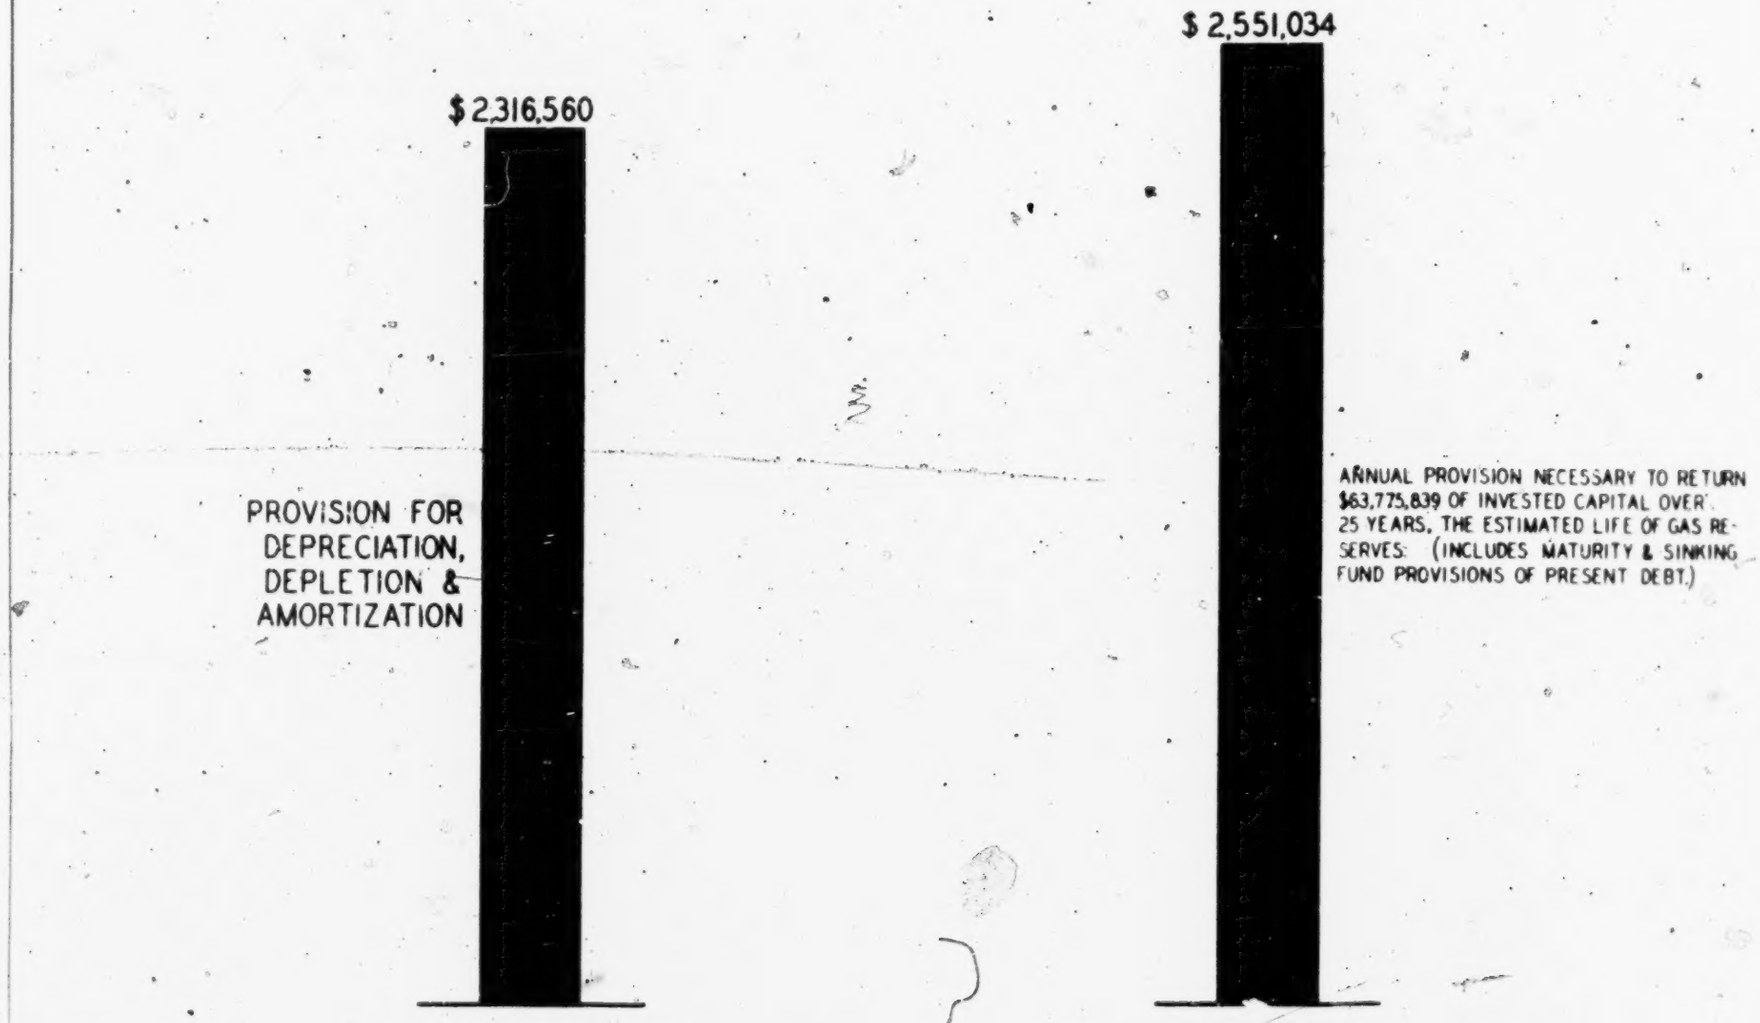
In Chart No. 31, captioned "Dollars Needed Annually by Panhandle to Return Capital to Investors When Gas Reserves Are Exhausted," the right hand bar shows the actual amount charged to earnings as a provision for depreciation and depletion and amortization of gas purchase contracts—a total of $2,346,560 for the twelve months ended June 30, 1941. This reserve of course represents the earmarking of a portion of earnings to cover the depreciation of the plant and amortization of other tangible and intangible assets over the period of their expected life.

I made no actual survey of the properties, nor do I question the adequacy or inadequacy of the annual provision for depreciation, depletion and amortization. However, in order to determine the dollar amount that would be necessary to return capital to investors when the company's reserves are exhausted, I accepted the assumption that the company's reserves would last for an additional 25 years as indicated by Mr. Ralph E. Davis in Registration Statement No. 2-4579, filed November 18, 1940, and computed by a straight line method the annual provision necessary to return $63,775,839 of invested capital over such a period. On such basis, I arrived at the estimate of $2,551,034 as the annual amount necessary to restore capital to investors when the reserves are exhausted. This amount, of course, includes maturity and sinking fund provisions of the present debt.

EXHIBIT 65

- CHART NO. 31 -

DOLLARS NEEDED ANNUALLY BY PANHANDLE TO RETURN CAPITAL TO INVESTORS WHEN GAS RESERVES ARE EXHAUSTED



[fol. 13607] Dollars Needed Annually by Panhandle for Current Capital Requirements—Bonds

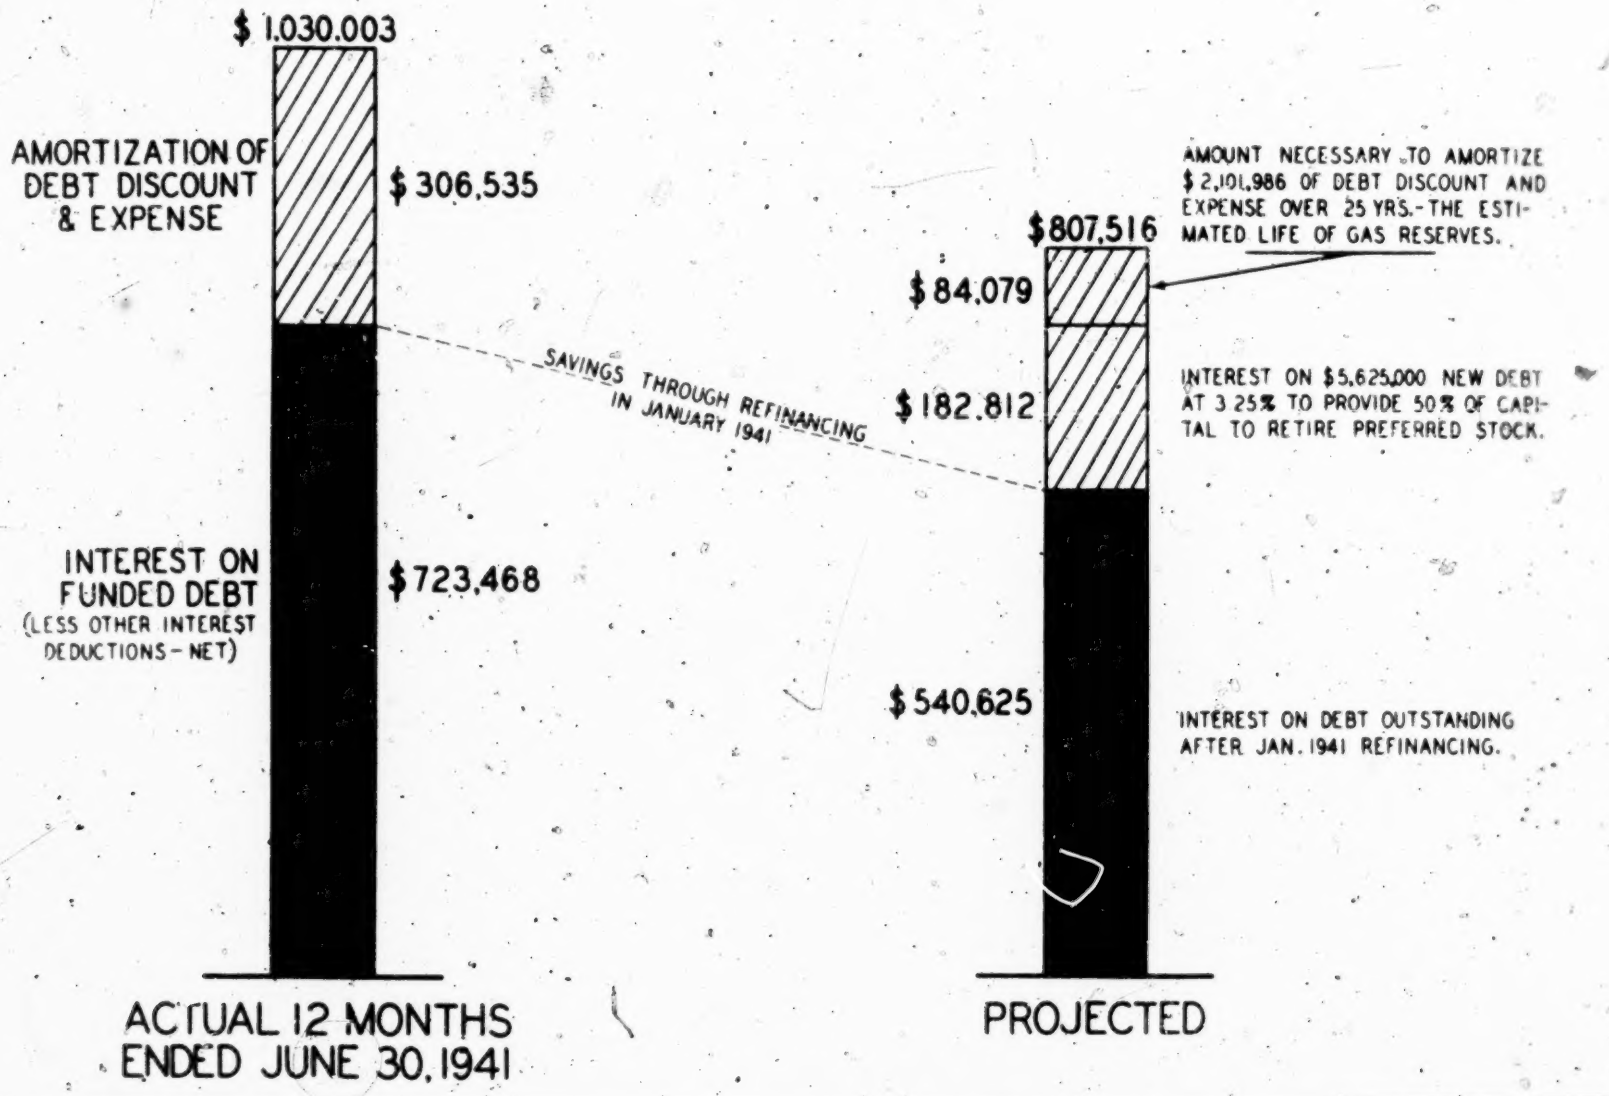
In Chart No. 32, captioned "Dollars Needed Annually by Panhandle for Current Capital Requirements—Bonds," the left-hand bar shows actual figures for the 12 months ended June 30, 1941, of interest on funded debt (less other interest deductions—net) of $723,468 and amortization of debt discount and expense of $306,535, or a total capital requirement for bonds of $1,030,003.

My projection of future capital requirements on bonds gave weight to the interest savings accomplished in the January, 1941, refinancing. I estimated annual interest requirements on the debt outstanding at $545,625. I assumed further that the existing $11,000,000 of preferred stock would be retired at prices of $100 per share and $125 per share respectively for the Class A and Class B preferred stock, or a total of $11,250,000, and that such funds would be raised through the proceeds of $5,625,000 of new debt sold on a 3.25% net yield basis and $5,625,000 of new common stock.

I projected interest requirements on such additional debt at $182,812. Having established the interest cost of bond capital, I investigated and found that the unamortized debt discount and expense on the books of the company was $2,101,986 as of June 30, 1941. Again adopting the straight line method of amortizing such capital costs for 25 years, the estimated life of the company's reserves, I determined that the annual requirement for such purpose would be $84,079, making a total projected amount of $807,516 as the amount needed annually for current capital requirements on bonds. This estimate represented a substantial reduction from the $1,030,003 actually shown for the 12 months ended June 30, 1940.

- CHART NO. 32 -

DOLLARS NEEDED ANNUALLY BY PANHANDLE FOR CURRENT CAPITAL REQUIREMENTS — BONDS



[fol. 13609] **Dollars Needed Annually by Panhandle for Current Capital Requirements—Preferred Stock.**

In Chart No. 33, captioned "Dollars Needed Annually by Panhandle for Current Capital Requirements—Preferred Stock," the left hand bar shows the dividend requirements and participation of the preferred stock as computed on the basis of earnings for the twelve months ended June 30, 1941. As shown, the fixed dividend rate on the 100,000 shares Class A preferred and the 10,000 shares Class B preferred stock total $660,000. In addition, however, the Class A preferred stock carries a participating feature whereby after $1.50 per share is paid on the common stock, any further dividends are distributed 25% to the Class A preferred stock and 75% to the common stock. The maximum participation of the Class A preferred stock on the basis of the net income as reported for the twelve months ended June 30, 1941, was computed at $728,480. On such basis, the total earnings applicable to the preferred stock were $1,388,480, as shown on the chart.

I have projected that the Panhandle Eastern Pipe Line Company will have no requirements for preferred stock in the future on the assumption that such stock will be retired with capital raised 50% by sale of additional debt and 50% by sale of additional common stock.

ASSUMING PREFERRED STOCK IS RETIRED WITH CAPITAL RAISED 50% BY SALE OF ADDITIONAL DEBT ON A 3.25% YIELD BASIS AND 50% BY SALE OF ADDITIONAL COMMON STOCK ON A 12.00% EARNINGS PRICE RATIO

PROJECTED

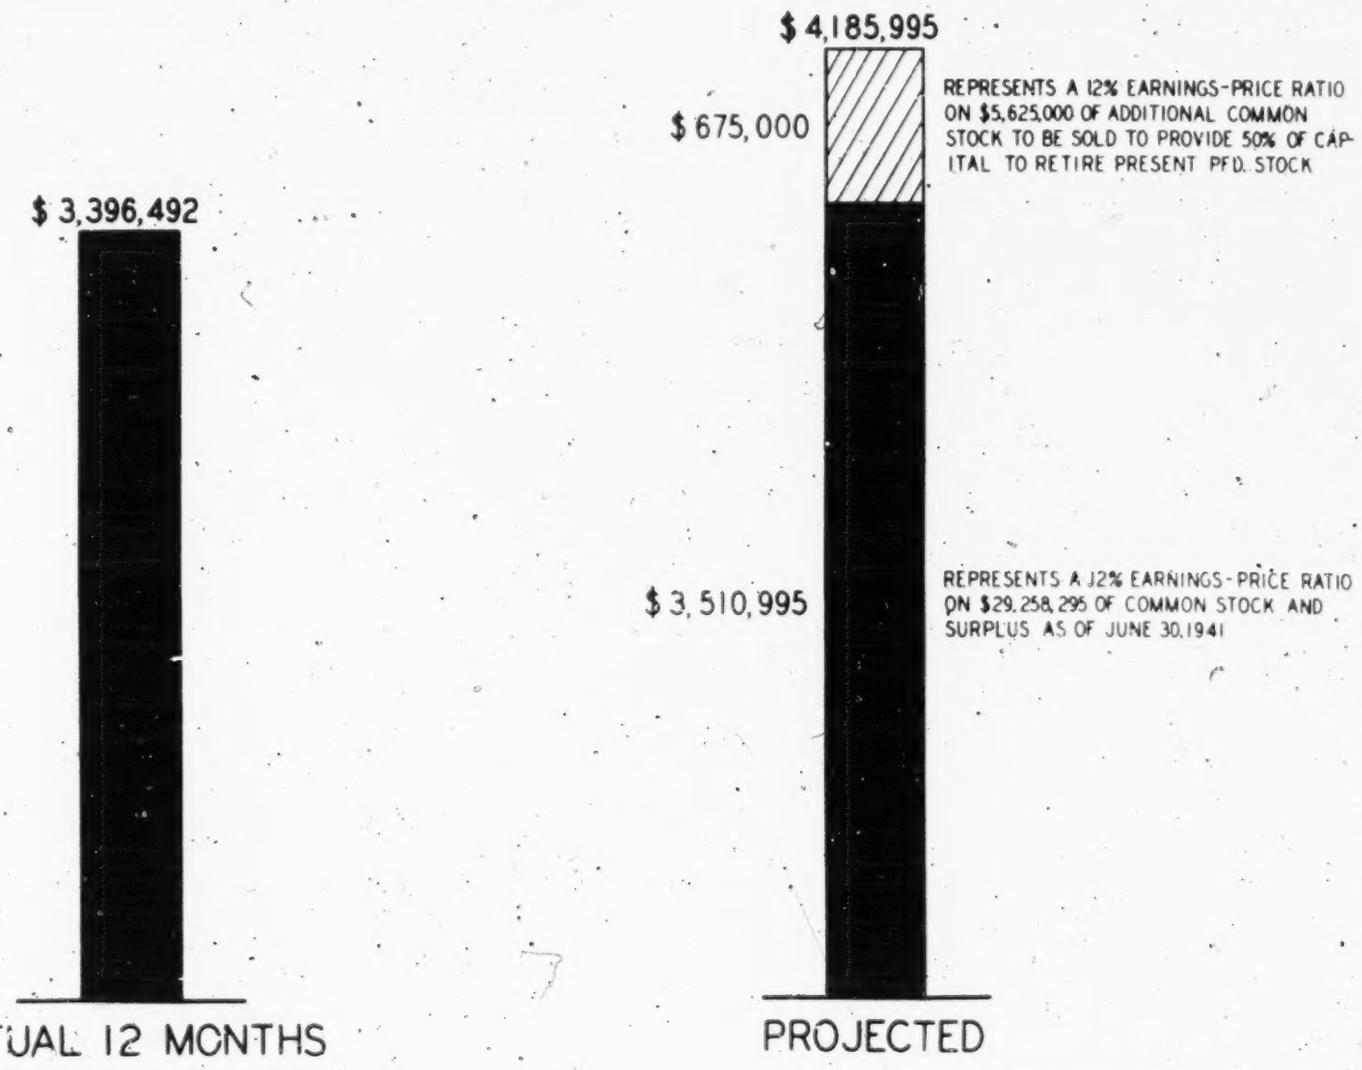
[fol. 13611] Dollars Needed Annually by Panhandle for Current Capital Requirements—Common Stock.

In Chart No. 34, captioned "Dollars Needed Annually by Panhandle for Current Capital Requirements—Common Stock," the left hand bar shows that there was $3,396,492 available for the common stock, after allowing for the maximum participation of the Class A preferred stock, in the twelve months ended June 30, 1941.

In the right hand bar I have projected the amount needed to cover capital requirements on the common stock for a reasonable period in the future. As shown in the chart, a 12% earnings-price ratio on $29,258,295 of common stock and surplus as of June 30, 1941, will require earnings of $3,510,995, a 12% earnings—price ratio on $5,625,000 of additional common stock, which, it is assumed, will be sold to provide 50% of the capital to retire the present preferred stock, would require $675,000. The total of these two amounts is $4,185,995, which I estimate is the amount that will be needed to pay common dividends and provide a reasonable addition to surplus.

- CHART NO. 34 -

DOLLARS NEEDED ANNUALLY BY PANHANDLE FOR CURRENT CAPITAL REQUIREMENTS - COMMON STOCK



[fol. 13613] Dollars Needed Annually by Panhandle for Total Current Capital Requirements—Total Invested Capital.

In Chart No. 35, captioned "Dollars Needed Annually by Panhandle for Total Current Capital Requirements—Total Invested Capital," I have summarized the data from the preceding three charts. As shown in the left hand bar, the total dollars earned toward capital requirements in the twelve months ended June 30, 1941, were $5,814,975. Of this amount, as has already been shown in preceding charts, $1,030,003 was applicable to bonds, $1,388,480 to preferred stock and $3,396,492 to common stock. As shown in the right hand bar, the total dollars that I have projected as being needed by Panhandle Eastern Pipe Line Company for current capital requirements on the total invested capital is $4,993,511, assuming that the present preferred stock is retired through the proceeds of the sale of additional bonds and common stock. The component estimates making up the total figure are $807,516 for bonds and $4,185,995 for common stock.

[fol. 13615] Dollars Needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors & Restore Invested Capital When Gas Reserves Are Exhausted—Based on Refinancing Preferred Stock

In Chart No. 36, captioned "Dollars Needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors & Restore Invested Capital When Gas Reserves are Exhausted—Based on Refinancing Preferred Stock," I have added together all the amounts that will be needed by the Panhandle Eastern Pipe Line Company over a reasonable period in the future. The method of arriving at such dollar figures was covered in the comments on Charts No. 29 to 35, both inclusive.

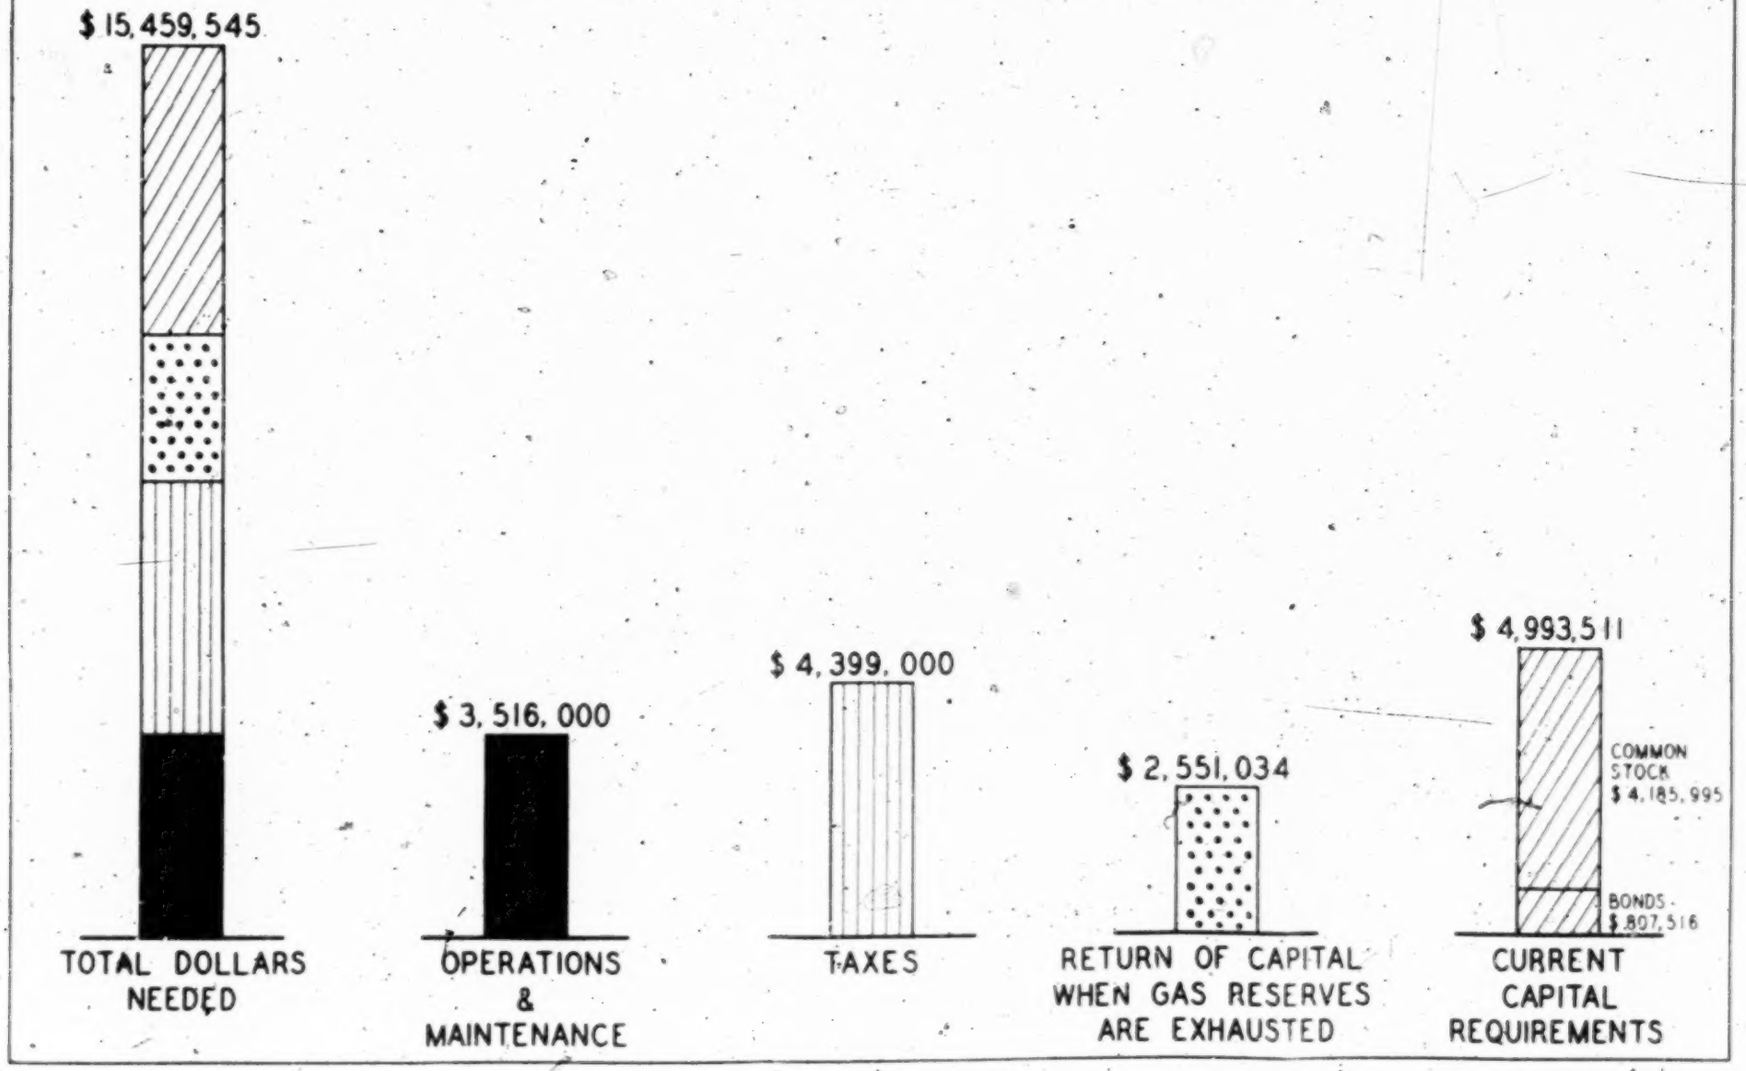
As shown on the accompanying chart, I feel that the company will require $3,516,000 for operations and maintenance, $4,399,000 for taxes, $2,551,034 for the return of invested capital when gas reserves are exhausted and $4,993,511 for current capital requirements on bonds and common stocks, giving effect to refinancing of the preferred stock.

The total of these amounts, as shown by the extreme left hand bar, is $15,459,545, which represents the minimum number of dollars which, in my opinion, will be needed annually by the Panhandle Eastern Pipe Line Company to provide adequate service to customers, a fair return to investors and restore the invested capital when gas reserves are exhausted.

- CHART NO. 36 -

DOLLARS NEEDED ANNUALLY BY PANHANDLE TO PROVIDE SERVICE TO CUSTOMERS, A FAIR RETURN TO INVESTORS & RESTORE INVESTED CAPITAL WHEN GAS RESERVES ARE EXHAUSTED

BASED ON REFINANCING PREFERRED STOCK



[fol. 13617] Dollars Needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors & Restore Invested Capital When Gas Reserves Are Exhausted—Based on Present Capital Structure

In Chart No. 37, captioned "Dollars Needed Annually by Panhandle to Provide Service to Customers, a Fair Return to Investors & Restore Invested Capital When Gas Reserves Are Exhausted—Based on Present Capital Structure," I show the total amount of dollars that will be needed by the company if it is unable to consummate the refinancing of its preferred stock.

The amounts needed for operations and maintenance, and taxes, are exactly the same as shown on the preceding chart. The amount needed to return the invested capital when gas reserves are exhausted is slightly less at $2,541,034 as compared with $2,551,034. The reason for this slight reduction in requirements is that the present invested capital is slightly smaller than it would be if a refunding program were consummated owing to the fact that such program would call for the payment of a $250,000 premium on Class B preferred stock.

Current capital requirements on the basis of the present capital structure would total $5,964,821. As shown on the Table for Chart No. 37 at the end of this report, such amount includes interest and amortization on the present debt of $824,704, preferred dividend requirements of $629,122 (including a participation for the Class A preferred stock computed on the basis of a $2.50 annual dividend on 807,367 common shares) and $3,510,995 required for the amount of common stock and surplus as of June 30, 1941 based on a 12% earnings-price ratio.

As shown in the accompanying chart, based on the present capital structure the Panhandle Eastern Pipe Line Company would require a total of $15,520,855 annually to provide service to customers, a fair return to investors and restore invested capital when gas reserves are exhausted. This is slightly more than would be required if the present preferred stock is refunded.

Table for Chart No. 21

DATA REGARDING PUBLIC OFFERING OF 355,250 SHARES
NORTHERN NATURAL GAS COMPANY COMMON STOCK

355,250 shares of Northern Natural Gas Co. common stock, representing 5% of the total common stock outstanding, were publicly offered on September 10, 1941 by Blyth & Co., Inc. This transaction did not represent new financing but was the stock which had previously been owned by The United Light & Railways Co. The price to public was $32.00 per share, but this amount included payment of a $0.60 per share dividend declared on September 4, 1941 and payable on September 30, 1941 to stockholders of record September 24, 1941. The public offering price on an ex-dividend basis was $31.40 per share. Data regarding the expenses of financing are shown in the following table:

	Per Share	Total for 355,250 Shares
Price to Public (ex-dividend basis)	$31.40	$11,225,900
Underwriting Commissions	2.35	834,838
Expenses to Seller	0.32	115,000
Net Proceeds to Seller (ex-dividend basis)	28.73	10,206,012

The underwriting commissions and expenses to the seller totaling $2.67 per share represented 8.50% of the price to the public and 9.29% of the net proceeds to the seller, indicating the current cost of financing an established natural gas pipe line company's common stock.

The latest reported earnings of the Northern Natural Gas Co. covered the twelve months ended June 30, 1941 and amounted to $3,737,260, equal to $3.68 per share. However, in the prospectus covering the public sale, it was stated that the new tax law under consideration would reduce net earnings considerably. An estimate by Northern Natural Gas Co., on the basis of the bill as passed by the House of Representatives, was that income and excess profits taxes for 1941 would increase by approximately $691,000 on a consolidated basis, approximately $431,000 of which would be applicable to the first six months of 1941. This would reduce net income for the twelve months ended June 30, 1941 to $3,306,260, equal to $3.26 per share. On the basis of these earnings and the prices above, the following earnings-price ratios are indicated:

	Earnings-Price Ratios	
	Based on Earnings Before Tax Adjustment	Based on Earnings After Tax Adjustment
Price to Public (ex-dividend basis) $31.40 per sh.	11.79%	10.38%
Net Proceeds to Seller (ex-dividend basis) $28.73 per sh.	12.81%	11.35%

P. McDonald Biddison,
Consulting Engineer
Dallas Gas Building
Dallas, Texas

October 14, 1938.

Panhandle Eastern Pipe Line Company,
90 Broad Street,
New York, N. Y.

Attention: Mr. J. D. Creveling, President.

Gentlemen:

I have made an appraisal of the consolidated Plant, Property and Equipment of Panhandle Eastern Pipe Line Company and its Subsidiary Companies, Central Distributing Company, and Illinois Natural Gas Company, as of September 30, 1938. For the Plant, Property and Equipment, I find a Reproduction Cost New of $64,724,344.93 and a Present Value of $63,248,549.57, as summarized on Pages

1 to 3 hereof. The values for leases used in the estimate are the values from the report of Ralph E. Davis of February 1, 1937, for leases and wells of that date less acreage surrendered since February 1, 1937, plus acreage acquired (at values determined from the Davis report) less my estimate of cost and value of wells included in his report.

The items Material and Supplies and Construction Work in Progress have been taken from the books. These values shown do not include any sums for Cash Working Capital, or Going Concern Value, all of which items are proper elements of the value to be used in fixing rates. The business of this company is still in the development stage and Going Concern Value is being created, but I have not made any estimate of its present amount.

I have examined a great deal of the property and have inspected plans and specifications under which it was constructed. The two gas fields from which the system draws its supply are the largest ever known. The compressor stations on the main system are carefully designed; their equipment is first class in all respects, they present a neat [fol. 13714] and attractive appearance and are maintained in excellent condition. All these features and tend to produce reliability and economy of operation. The main transmission system has been constructed with a margin of safety as to pressure so that it may safely be operated at 500 pounds compressor station discharge. River crossings locations have been selected so as to secure the greatest degree of stability obtainable and multiple lines across streams so located and installed as to leave very slight probability of interruption from such causes. The lines have been well located and well laid to secure stability and are carefully maintained. The main line loops completed in 1937 provide additional protection against service interruption. The Gasoline Plant at Liberal is of the most recent design and the dehydration plant in connection with it is an effective insurance against interruption of service from freezing of lines. Measuring and Regulating Stations are of up to date equipment, carefully maintained and the stations are neat and clean. Little evidence of deterioration in the property can be found except in that relatively small portions in the local fields near Kansas City. Pipe exposed in making connections for 1937 additions

show no interior corrosion. Later tests have disclosed light interior encrustation (mostly sand) on the original line westward from Olpe to Liberal. This is not pitting nor active corrosion. Steps are being taken to clean the interior of the section affected. Inspection of routine reports on condition of protective coating show little deterioration of protective coating and pitting only in a few very restricted areas. Such areas are being protected cathodically as they develop.

Yours very truly,

P. McDONALD BIDDISON,
Consulting Engineer.

Panhandle Eastern Pipe Line Company
Kidder Peabody & Co. and the other several Underwriters

Dear Sirs:

We submit herewith report covering our recent study of the natural gas supply, also value of gas reserves and wells of Panhandle Eastern Pipe Line Company.

Yours very truly,

RALPH E. DAVIS, INC.,
Engineers.

By Ralph E. Davis,
President.

[fol. 14207] Panhandle Eastern Pipe Line Company
Natural Gas Supply

Value of Gas Reserves and Wells

February 1, 1937

We have made an investigation and study of the supply of natural gas available to Panhandle Eastern Pipe Line Company and submit the following report, in which we have

endeavored to cover everything of importance to prospective investors in reaching conclusions as to the adequacy of the Company's gas supply.

The gas produced and purchased by this Company and the gas reserves available to it are located almost entirely in the Amarillo and Hugoton gas fields.

The Amarillo Field

Description and Development

The Amarillo Field contains the largest known gas reserve in the world. The proven gas area extends for a distance of some 125 miles through the Panhandle of Texas, varies from less than 10 to almost 40 miles in width, and covers approximately 1,400,000 acres. Gas was discovered in this field in December, 1918 as a result of exploration for oil. Subsequent development was very slow until the discovery of oil in 1925 led to more active drilling, which in 1926 and 1927 demonstrated the existence of extensive deposits of oil and gas. In November 1936 there were 1277 producing gas wells and 2907 oil wells in the oil producing area of the field, and drilling of both oil and gas wells continues actively.

The greater part of the gas produced in the Amarillo Field is "sweet" gas, containing practically no sulphur. However, along the northern flanks of the field there is a large area in which the gas produced is "sour", that is, it contains noticeable proportions of sulphur and sulphur compounds, to an extent rendering it undesirable without purification for ordinary commercial distribution or utiliza- [fol. 14208] tion; it is suitable, however, for burning in the carbon black manufacturing plants operating in this field. The location of the sweet gas and sour gas areas and the properties controlled by the Company are shown upon an appended map. The oil producing area of the Amarillo Field lies in a relatively narrow band extending for more than 90 miles along the northern flank of the field, from Hutchinson to Wheeler Counties, and located in general in the sour gas area.

The oil produced is accompanied by considerable casing-head gas, so that the early rapid development for oil led to the construction of many natural gasoline plants for

the extraction of gasoline from the casinghead gas available from the oil wells and the wells producing both oil and gas. After the extraction of gasoline from the casinghead gas, the residue gas discharged from the gasoline plants was blown into the air for lack of market.

This led to the erection of carbon black plants in the field to take advantage of the large supply of cheap gas. Prior to 1930 the principal seat of the carbon black industry was in the Monroe Gas Field of Louisiana. The trend of this industry since about 1930 has been marked by a reduction in the number of plants operating and quantities of black produced in Louisiana, coincident with the construction of many large plants in the Amarillo Field, which has now become the principal source of carbon black in the world. There are now 30 carbon black plants in the latter field which consumed, during the twelve months ending July 31, 1936, an average of approximately 500,000 M cubic feet* of gas per day.

It was also found that the dry gas produced from wells making gas only, contained 250 or more gallons of gasoline per million cubic feet of gas; and that this relatively small gasoline content could be extracted with profit when treated in large volumes, even though there was no market for the residue gas after the gasoline was extracted. Hence, numerous natural gasoline plants were constructed for extracting or "stripping" the gasoline from this dry gas, allowing the residue from such "stripper" plants to be blown into the air. This wasteful practice of "stripping" was [fol. 14209] practically eliminated during the summer of 1935, by State regulation. There are now 44 natural gasoline plants in the Amarillo Field which consumed an average of approximately 1,083,000 M cubic feet per day during the 12 months ending July 31, 1936.

During the period from 1926 to 1931, 9 major pipe lines were constructed from the Amarillo Field to important, distant markets. These pipe lines derive their supply of gas from the sweet gas wells and the residue gas discharged from several of the gasoline plants which treat casinghead gas.

*All volumes in this report are at a pressure base of 16.4 pounds per square inch, absolute pressure.

The large pipe line companies secured extensive blocks of leases for their individual requirements and in certain instances made contracts to purchase gas from other gas producers. A large number of gas wells were completed as a result of exploration for oil and many of these independent gas producers found themselves unable to sell gas or to make any profitable use of their wells. Some of these producers sought a quick outlet for their production through sales to the stripper gasoline plants.

The State of Texas has had general oil and gas conservation laws for many years (since 1899). In 1931, a State law was passed classifying the gas pipe line companies as common purchasers and requiring them to take gas ratably from all wells in any field based upon open flow capacity. This law was declared unconstitutional. A subsequent law was passed limiting the field output to the market demand, but this law was also declared invalid. At first the use of gas for gasoline plants which had no market for their residue was limited to the casinghead gas produced from combination oil and gas wells, as distinguished from dry gas wells. Early in 1933, certain gasoline plants were granted special permits for processing dry gas and soon a number of new gasoline plants of large capacity were constructed for this purpose and many of the existing plants previously treating only casinghead gas, began processing dry gas and blowing the residue to the air. By the Spring of 1935, the quantities of gas being blown to the air in this field exceeded one billion cubic feet per day. This tre- [fol. 14210] mendous waste of natural resources attracted national attention. If it had been permitted to continue, it would have seriously affected the future life of this great gas field supplying gas to consumers from Denver to Chicago and from Dallas to Minneapolis.

In 1935, the State of Texas enacted a comprehensive conservation statute (House Bill No. 266) which among other things, prohibited the escape to the air of gas produced from any gas well, before or after processing for gasoline extraction and prohibited the use of sweet gas produced from any gas well for carbon black manufacture. The market requirements for gas from the field were to be deter-

mined each month by the Railroad Commission and prorated between producers on the basis of acreage and open flow capacity of the wells. Under this law and the regulations of the Texas Railroad Commission, the gas blown to the air from gasoline plants has been reduced to 100,000 or 150,000 M cubic feet per day.

The above statute was attacked in the courts by two of the pipe line companies operating out of the Amarillo field, and on February 1, 1937, the Supreme Court of the United States held it to be unconstitutional insofar as it might be construed to permit certain proration orders entered by the Texas Railroad Commission. Whatever the immediate effect of this decision may be it is probable that the normal operation of economic factors will prevent any gas wastage on a large scale for more than a limited period of time in the future.

Gas Reserves—Entire Amarillo Field

The Amarillo Field is located in an area where thick, marine, sedimentary beds were deposited in ancient times upon older rocks, known as the buried Amarillo Mountains. This buried mountain ridge underlies and forms the core of the field; while the sedimentary strata were laid down about it and over it like layers of blankets, arched upward along its flanks, thus forming a long anticlinal structure. The gas production is obtained from the Gray Lime and dolomitic Big Lime and from the Granite Wash, the latter being formed of detrital deposits washed down from the older mountains. These formations are of considerable thickness and have high porosity and permeability, as indicated by the large open flow capacity of the wells. The [fol. 14211] initial rock pressure of the wells was uniformly 430 pounds per square inch throughout the principal portion of the field, which is recognized to be a continuous, connected unit reservoir. The exception to this original pressure was found in the wells in Potter County to the south of the fault separating that area from the main part of the field, where initial pressures of 720 pounds were observed. The depths of the wells vary from 2000 feet in the east end of the field to approximately 3000 feet in the western portion. The rock pressure in gas fields is generally found to be closely related to the depth of the

gas sand below the permanent water level in the vicinity. In the Amarillo Field the water table is deeply submerged below the ground surface, and as a result, the original rock pressure, although less than would be expected for wells of such depth, is normal with respect to the submerged water table.

The early estimates of gas reserves in the Amarillo Field, made before any considerable metered production had occurred, and prior to the time when reliable rock pressure records for the large number of wells were available, were necessarily based upon estimates of thickness and porosity of the producing horizons, considered in conjunction with the initial pressure and acreage involved. Estimates by such methods ranged from 5 to 16 trillion cubic feet.

The gas production from this field was at first not metered and many large wells blew open to the air for considerable periods of time. After 1933, however, practically all of the gas produced has been metered, and considered together with the most reliable estimates of the previous unmetered quantities, the total production to the end of the year 1935 is estimated to have been approximately 5 trillion cubic feet. See the attached Table No. 10.

The average rock pressure of the entire field weighted with respect to acreage, has been computed by us to be 357 pounds per square inch, as of January 1936. This weighted average pressure is independently confirmed by the Texas Railroad Commission's estimate of 355 pounds for July 1936. The pressure remaining January 1936, compared with the average initial rock pressure of 430 pounds, shows a total average pressure drop of 73 pounds; this [fol. 14212] results in a calculated withdrawal per pound drop in pressure of approximately 68.5 billion cubic feet. Theoretically, and supposing the reservoir to be of uniform thickness, porosity and content per acre, this withdrawal would indicate a future reserve as of January 1936, down to atmospheric pressure, of 24.4 trillion cubic feet. The reservoir is not uniform throughout, however, as indicated by the differences in the open flow, thickness of sand encountered and productive history generally. Past production to a large extent has come from the wells of larger

than average capacity, and it is reasonable to assume that the ultimate reserves of the portions of the field where the wells are larger will be greater per acre than in those portions where the wells' capacity are smaller. In practically 50% of the total acreage of the field, the remaining rock pressure is still more than 400 pounds per square inch. The ultimate rock pressure of the field to be reached at the time of final abandonment is also a factor which cannot be foreseen with exactness, but in any case not all of the present gas in place can be recovered. Making allowances for the condition of lack of uniformity of the reservoir rocks and for the portion of the reserves that will be unrecoverable, we have arrived at an estimate of the future recoverable gas production from the entire Amarillo Field as of January 1, 1936, of 20 trillion cubic feet. The reasonableness of this reduction from the theoretical result first arrived at may be tested by the following assumptions. If the final abandonment pressure should average 30 pounds instead of atmospheric pressure, then the 24.4 trillion cubic feet mentioned above would be reduced to 22.4 trillion. A further decrease of approximately 10% of this adjusted figure to 20 trillion cubic feet is equivalent to assuming that as much as 300,000 acres in the undepleted portion of the field will be found to contain an ultimate reserve of only 60% of the average content per acre in the main part of the field, in which practically all of the production and pressure decline have occurred up to the present time. Production data for the field for the full year 1936 are not yet available but it is estimated that the quantity of gas produced during the period from January [fol. 14213] 1, 1936 to February 1, 1937, was approximately 700 billion cubic feet. Taking into account this production, the remaining reserves of the field on February 1, 1937, are here estimated at 19.3 trillion cubic feet.

Company Gas Reserves in Amarillo Field

The location of the acreage under lease and controlled by the company under gas purchase contracts is shown on the appended map. This map also presents the average rock pressures remaining in January 1936 in various parts of the field. On November 1, 1936, the Company had leases covering 37,390 acres in the proven area, including 10,589

acres developed by gas wells, and 26,801 acres which were proven but undeveloped. The Company controlled 9,496 proven acres through gas purchase contracts. We at that time estimated the gas reserves for the entire Amarillo Field at 19.5 trillion cubic feet, representing an average of 13,900 M cubic feet per acre. However, as shown in Table No. 11, the Company's wells have higher open flow capacities and higher average rock pressures than the average for the entire field, whereas the wells controlled under gas purchase contracts show lower than average open flow and rock pressure tests. The Company is in position to take as much gas from the field as it is entitled to produce from the acreage it controls, and guided by these comparisons, we estimated future reserves for its leases as of November 1, 1936, at 15,000 M cubic feet per acre, and for the properties under contract at 11,000 M cubic feet per acre. The combined gas reserves controlled by the Company in the Amarillo Field, as of November 1, 1936, were thus estimated at 665 billion cubic feet.

During the period from November 1, 1936 to February 1, 1937, new properties have been added to the system and some gas has been produced, resulting in a net addition to the Company's proven reserves as shown by the following:

[fol. 14214]

	Proven Reserves—Amarillo Field	
	November 1, 1936	February 1, 1937
Company Acreage, acres	37,390	38,070
Reserves at 15 million per acre, in billions of cubic feet	561	571
Purchase Contract Acreage, acres	9,496	22,964
Reserves at 11 million per acre, in billions of cubic feet	104	253
Total Acres Owned or Controlled	46,886	61,034
Total Reserves, Billions of cubic feet	665	824
Production, November 1, 1936 to February 1, 1937		6
Reserves Owned or Controlled, Billions of cubic feet		818

Hugoton Field

Description

The Hugoton Field contains the second largest known natural gas reserve. It centers in Stevens County in southwestern Kansas but the proven area extends north into Finney County and south through Texas County, Oklahoma into the northernmost part of the Panhandle of Texas, as shown on the accompanying map.

Several gas wells were drilled in this general area in 1922 in the search for oil. The region was far from any large gas line or gas market and it was not developed extensively until 1929, 1930 and 1931. During this period approximately 150 gas wells were completed, proving up an immense natural gas reservoir.

The proven and probable gas area of the Hugoton Field, as bounded by the circumscribing line on the map, is approximately 110 miles long, or a width ranging up to 32 miles, and contains more than 1,700,000 acres. Within this area, however, there are many townships that have not yet been tested, although all of the wells drilled to the pay in this field have been found productive. It is possible that parts of the area included within the border line, showing the probable limits of the field as we now see it, may be found to be non-productive or to contain gas in quantities [fol. 14215] smaller than commercially profitable. It is also possible that considerable areas outside of this border line may eventually be found to contain gas in substantial quantities.

The Hugoton Field is located on a broad arch, dipping gently to the southeast. The gas deposit is encountered in the dolomitic Big Lime of Permian Age at a depth of approximately 2800 feet. This stratum is also an important gas-bearing horizon in the Amarillo Field, some 100 miles south of the producing area at Hugoton. The initial rock pressure of the Hugoton gas wells was uniformly 430 pounds per square inch or slightly higher, practically the same as in the Amarillo Field. This similarity of reservoir pressures in the closely related strata in these two fields has led many to believe that the fields are connected, forming one large connected natural gas reservoir.

The Hugoton Field is purely a dry gas field, no oil having to date been discovered either in the gas producing formations or below them. The Hugoton gas is entirely a "sweet" gas, containing some 300 gallons of gasoline per million cubic feet of gas, or about the same gasoline content as the dry gas at Amarillo. There has been one casinghead gasoline plant operating in the Hugoton Field for several years and the Panhandle Eastern Pipe Line Company is now completing a gasoline plant at Liberal, Kansas, to treat the gas from Hugoton, as well as that from Amarillo. There is one small carbon black plant in the Hugoton Field in Grant County. Two of the major carbon companies have extensive acreage in the north part of the Hugoton Field.

Gas Reserves—Entire Hugoton Field

Two of the major pipe line companies, the Northern Natural Gas Company and the Panhandle Eastern Pipe Line Company, have been withdrawing gas from the Hugoton gas field. The total production handled by these pipe lines and the smaller local lines and gas used for field purposes up to the present time has approximated 100 billion cubic feet. The reduction in pressure caused by this withdrawal is surprisingly small,—the average rock pressure of the 59 wells from which the Company withdraws gas [fol. 14216] having been reduced from an average of 432 pounds initially to a present average pressure of 418 pounds per square inch. The past production and reduction in rock pressure in this field have been of too small proportions to form a basis for accurately estimating reserves. However, in so far as the productive history is subject to interpretation, the gas content per acre is indicated to be substantial. Several careful pressure tests made upon wells in the vicinity of wells from which large volumes of gas had been produced showed very little reduction in rock pressure. If we consider that the 100 billion cubic feet has been produced from an area within a mile of the producing wells, amounting to some 175,000 acres, the decline in rock pressure to date would indicate an ultimate production of at least 15,000 M cubic feet per acre, for this productive area.

Considerable weight, however, must be given to comparison of the size of the wells at Hugoton with those in the

Amarillo Field, where we have enough productive history to more accurately estimate reserves. The initial open flow capacity of the wells at Hugoton averaged 5,000 or 6,000 M cubic feet per day per well, compared with an average of 25,000 to 30,000 M cubic feet in the Amarillo Field. We have estimated the ultimate production in the entire Amarillo Field at 25 trillion cubic feet, or an average of approximately 18,000 M cubic feet per acre, and it is reasonable to assume, from present indications, that the average acreage content in the Hugoton Field will be considerably less than at Amarillo.

In estimating the recoverable gas per acre at Hugoton by the method of computing the porous volume of the gas-bearing reservoir, it may be assumed that the productive zone averages at least 50 feet in thickness and has a porosity of 20%, indicating recoverable reserves down to an estimated abandonment pressure of 50 pounds per square inch, of 10,000 M cubic feet per acre.

Considering all of the known factors, we feel that the present productive portion of the Hugoton Field will provide a future recoverable production of at least 10 million cubic feet per acre. It should be recognized that within the [fol. 14217] limits of this immense field, as now indicated by the outlying scattered wells, there are large areas still untested by the drill that may readily be found to contain less than 10 million cubic feet per acre, also that the size and limits of the field as it will eventually be developed can now be only generally anticipated. Hence, we estimate the present known gas reserves of the entire Hugoton Field at not less than 10 trillion cubic feet. This is equivalent to 1,000,000 acres at 10,000 M cubic feet per acre, or 1,250,000 acres at an average of 8,000 per acre, that may now be classified as proven, while further development may readily disclose substantially greater quantities.

Company Reserves at Hugoton

The location of the Panhandle Eastern Pipe Line Company's leases and acreage controlled under gas purchase contracts in the Hugoton Field is shown on the accompanying map. The Company's net interest in gas leases covers 112,243 proven and probable acres, of which 9,660

acres have been drilled and are producing. The Company controlls 7,140 acres through gas purchase contracts and is obligated to deliver gas locally to Argus Pipe Line Company under gas sales contracts covering 12,108 acres. As shown in Table No. 7, we estimate the Company's reserves at 10,000 M cubic feet per acre for leases in this producing area, and 8,000 M cubic feet per acre within the proven and probable zone outside of the producing area. The Company's combined interest in leases and purchase and sales contracts enables it to control, for the supply of its main pipe line system, a total known gas reserve in excess of 1 trillion cubic feet. See Table No. 7.

The Amarillo and Hugoton Fields as a Unit

These two great fields are situated close together and the main pipe lines of the Panhandle Eastern Pipe Line Company and Northern Natural Gas Company are already connected to both fields. The Cities Service Gas Company holds important acreage in the Hugoton Field, which is also within ready connection distance to the Chicago line from Amarillo. The two fields taken together thus form a common source of supply for the long distance transmission lines to the east and northeast. The Amarillo Field [fol. 14218] is at present the larger of the two; it contains larger wells, it was developed first and during the period when so much gas was wastefully blown into the air in this field, it was more practical and economical to utilize the cheap Amarillo gas. However, the waste gas has now become less available, and further production of gas in the Amarillo Field will reduce the remaining pressure and available acreage to a point where more of the supply of gas for the large pipe lines will need be drawn from the Hugoton Field which is almost 100 miles nearer the distant markets.

The total production for these two fields for the twelve months ending July 31, 1936 is estimated as shown in Table No. 12 to approximate 664 billion cubic feet. Of this quantity, the pipe lines used 187 billion, the carbon black plants burned 184 billion, smaller quantities were utilized in oil field operations and shrinkage by gasoline extraction and the remainder was wasted by blowing to the air in the Amarillo Field. In addition to the Panhandle Eastern

Pipe Line Company's 22" line connecting with its main 24" pipe line system which transports gas eastward, finally reaching Detroit, the major pipe lines withdrawing gas from the Amarillo-Hugoton Fields include the Colorado Interstate Gas Company line to Denver, the Chicago line, the Northern Natural Gas Company line to Omaha and to Minneapolis and St. Paul, the Cities Service Gas Company line to Kansas City, the Consolidated Gas Utilities Company line to Wichita, the Lone Star Gas Company line to Fort Worth, the Northern Texas Utilities Company line to Wichita Falls, the lines to Amarillo and Lubbock, Texas. Several of these pipe lines are already operating at near maximum capacity. The pipe line systems are subject to further material increase in capacity, however, by the addition of compressor equipment and by partial looping of the pipe lines themselves, while it is not unlikely that in time additional lines may be built.

The carbon plants in Amarillo have been substantially increasing their gas requirements in recent years, as shown in Table No. 10. Several of the carbon companies are developing gas reserves in the Hugoton Field. While only one small carbon black plant has as yet been constructed [fol. 14219] in Kansas, the State Conservation Act of 1935 specifically permits the use of gas for carbon black manufacture and it is likely that the carbon black industry will further expand operations in the Amarillo-Hugoton area.

The Texas Conservation Act of 1935 has been held unconstitutional in so far as it might be construed to permit certain proration orders entered by the Texas Railroad Commission. Regardless of this, it is not reasonable to expect that an unnecessarily large wastage of gas will be permitted to continue for any considerable time.

As shown in Table No. 12, after adjusting actual production figures to give effect to the reduction during the past year in the quantities of gas wasted, as well as to the continually increasing utilization of gas, we estimate that the total present production of the Hugoton and Amarillo Fields taken together, is at the rate of approximately 600 billion cubic feet per year. Future expansion of pipe line and carbon black operation will no doubt materially in-

crease this figure to an extent that cannot be very accurately forecast, although it may readily reach a total of 750 or 800 billion cubic feet per year. Such an ultimate total production of gas may be compared with the combined recoverable reserves of these two fields, here estimated at approximately 30 trillion cubic feet. The reserves of the Amarillo-Hugoton Fields are thus sufficient to provide a supply of gas for all reasonably expected future requirements for many years to come,—at least 25 years.

Company's Gas Supply

We have estimated that Panhandle Eastern Pipe Line Company now controlls proven gas reserves for the supply of its main pipe line system, aggregating 1,874 billion cubic feet, of which 1,559 billion cubic feet are in the Company's own gas producing properties and 324 billion are in properties controlled under contract. The Company's gas wells and producing properties have previously been owned and operated by its producing subsidiary, Texas Interstate Pipe Line Company, which we are informed, has recently transferred all of its properties and operations to Panhandle Eastern Pipe Line Company. The total natural gas produced and purchased by Panhandle Eastern Pipe Line [fol. 14220] Company and subsidiaries for the twelve months ending September 30, 1936, amounted to 20.4 billion cubic feet. Sales of gas transported through the Company's main line have been increasing rapidly and substantial further improvement is anticipated, by reason of the completion during the past year of 22" pipe line to Detroit which will be supplied with gas passing through the Panhandle's main line system. The market for natural gas at Detroit is large, the market for industrial gas for heat treating and special industrial processes involved in the manufacture of automobiles and automobile accessories being one of the important potential markets for natural gas in the United States. The quantities of gas required for the Panhandle system after the development of the load at Detroit will depend upon the availability of gas in the field at reasonably low prices, the capacity of the system and the market for gas at satisfactory delivered prices. The market and the gas supply seem assured. The capacity of the pipe line, as increased by construction during the past year, is in the neighborhood of 120 million

cubic feet per day (all volumes at 16.4 pound base), or 25 to 28 billion feet per year, at the probable load factors. This capacity can be increased considerably by the addition of compressor equipment and could be further increased by the partial looping of the line, while total gas handled may be increased by improving the load factor. Engineers for the Company have estimated a gas requirement of 30 billion cubic feet (16.4 base) for the year 1937, with further expected growth of the market, estimated to require a supply of 43 billion cubic feet per year by 1941. Even with such a greatly expanded load, assuming that it may be attained, comparison with the estimated gas reserves controlled by the Company, indicates that it has an available supply of gas sufficient for more than 25 years.

Other Possibilities in Western Kansas

The Company's main transmission line passes through southwest and south-central Kansas, a region which is generally favorable for the future development of additional gas production. Petroleum and natural gas have been produced in the older fields in the southeastern por- [fol. 14221] tion of Kansas for the past 30 years. The underlying formations of southern Kansas are sedimentaries ranging in age from Pennsylvanian to Pre-Mississippian and are sufficiently undulating to afford numerous areas which structurally are favorable for the accumulation of natural gas.

Extensive natural gas developments have occurred during the past several years in the vicinity of Wichita and to the northwest along the Barton Arch. Several important new fields have recently been discovered including the Burrton Field near Hutchinson and the Rush County Gas Field. The opportunity for discovery of similar structures is favorable and there is much of western Kansas which still remains to be explored. In the final analysis, all of the major pipe lines withdrawing gas from the Amarillo-Hugoton area will have about the same ultimate life, since each draws from the common reservoir available to all; hence any additional fields that may be discovered near the source of supply of the major pipe lines will add to the common supply and ultimate life of all of them.

The Company has been producing and purchasing small quantities of gas in the old depleted shallow gas fields south of Kansas City, which are here estimated to provide a reserve of 10 billion cubic feet.

Valuation of Company's Gas Producing Properties and Leaseholds.

Properties in Producing Areas

These valuations are detailed in Tables No. 2 and 3. In the Amarillo Field we have estimated that the Company's leases in the actively producing area within ready connection distance from the Company's gathering lines contain gas reserves totalling 489 billion cubic feet and that its leases of the same classification in the Hugoton Field contain 310 billion, or a total reserve of 799 billion cubic feet. The Company also has considerable proven acreage, especially at Hugoton, in outlying areas, although not so readily subject to connection to its present pipe line system. Furthermore, it purchases large quantities of gas, under many purchase obligations covering substantial acreage, and will be subject to general programs of pro- [fol. 14222] ration and regulation whereby the major pipe lines are to some extent required to provide a market for independent producers. We have given consideration to the probable proportion between the future supply to be withdrawn from the Company's own acreage and that from its gas purchase contract acreage, comparing open flow capacity, reserves per acre, extent of acreage and costs of production and purchasing, as well as the position of the main pipe line system with respect to each of the two important fields, line capacity, and probable future markets. As a result of this study, we feel that for the purpose of judging the value of these properties, it is reasonable to anticipate a future production from this particular acreage over the next 25 years of 600 billion cubic feet, of which 375 billion will be from Amarillo and 225 billion from the Hugoton Field. Production may, and probably will, continue from these properties after 25 years, but so far as their present value is concerned we disregard profits which may accrue thereafter.

The value of gas at the well in the Amarillo Field is taken at $.04 per M cubic feet and the Hugoton Field at

$.045. We have estimated operation, taxes and general expenses at $.008 per M cubic feet for both fields, from a consideration of the Company's actual costs, as presented in Table No. 13, as well as of costs generally in these fields. The estimated expenses are intended to allow for a decreased cost per M cubic feet upon the immediate increase in production per well, for an increased expense when future production declines some years hence, and for a proper provision for overheads and contingencies. Royalties are computed at 1/8 of $.04 in Amarillo and 1/8 of $.05 in the Hugoton Field, as paid. Rentals are estimated at $50,000 per year in each field, approximately equivalent to the present rate. Future development costs for the undrilled properties in the proven area are estimated at $25,000 per well on the basis of about 440 acres per future well, a somewhat wider spacing than at present, and resulting in total estimated development costs of $1,250,000 in each field.

The total net future returns from the Amarillo proper- [fol. 14223] ties and leases are estimated at $7,625,000, the present value of which, including present wells and well equipment, we place at $3,000,000. The factor by which to discount expected future returns to arrive at their present value is a matter of judgment. In this case the future returns are estimated to accrue at a slightly increasing rate over the next 25 years. We have estimated the present value thereof at approximately 40%, which is equivalent to discounting the net future returns at 8% per year compound discount.

The estimated total net future returns of the Company's Hugoton properties in the producing area amount to $4,418,750, the present value of which is placed at $1,750,000.

Value of Company Acreage Outside of Producing Areas

In the Amarillo Field the Company has leases covering 5,490 acres in the proven sweet gas portion of the field but outside of the area we have classified as actively producing. We value this acreage at approximately $10 per acre, or a total of $55,000.00.

In the Hugoton Field the Company has a large number of scattered leases throughout the area classified as proven and probable but outside of the present producing area. While much of this acreage should ultimately prove to con

tain 8,000 M cubic feet per acre, or more, the costs of constructing gathering lines necessary to collect gas throughout this large field will be a serious obstacle, which will probably lead to the release of much of the acreage in scattered areas and the accumulation of more concentrated blocks in localities favorable to the Company's gathering line system. We appraise the value of the Company's 81,231 acres in this classification at around $3 per acre, or a total of $244,000.00.

The Company also has leases covering 6,025 acres outside of the proven sweet gas area in the Amarillo Field, which we value at $6,000. In the Hugoton Field the Company holds 51,445 acres outside of the proven and probable area, which we value at about $.50 per acre, or $25,000.00.

[fol. 14224] Total Valuation

As summarized in Table No. 1, we have estimated the total value of Panhandle Eastern Pipe Line Company's gas producing properties (including wells and well equipment) and gas leaseholds at $5,080,000.00.

Summary and Conclusions

The Panhandle Eastern Pipe Line Company obtains its supply of gas from the Amarillo and Hugoton Fields, the combined reserves of which we estimate at approximately 30 trillion cubic feet. Gas is being produced in these two field at the rate of approximately 600 billion cubic feet per year, and while this will no doubt increase considerably, these fields provide a supply sufficient for all probably uses for a period of more than 25 years.

The Company itself controls gas reserves under leases and gas purchase contracts estimated at 1,374 billion cubic feet. Its delivery requirements, which have increased to a present annual total approximating 20.4 billion cubic feet are expected to soon reach 30 billion and may thereafter increase to the order of 40 billion cubic feet per year.

After giving consideration to all of the known factors affecting the future supply and probable demand, it is our judgment that Panhandle Eastern Pipe Line Company will be able to obtain, at reasonable costs, supplies of natural gas sufficient for its market requirements for a period of not less than 25 years.

We have estimated the value of the Company's producing properties and proven leases in the actively producing areas of these two fields at $4,750,000, and the value of its other leases at $330,000.00, arriving at a total value of gas producing properties and leaseholds of $5,080,000.00.

Board of Directors,
Panhandle Eastern Pipe Line Company,
New York, New York.

Gentlemen:

In accordance with your request, we have made a study as of September 30, 1940 of the natural gas supply available to your company. The gas produced and purchased by your company and the gas reserves available to it are located almost entirely in the Amarillo field of Texas and in the Hugoton field which includes portions of (a) southwestern Kansas, (b) the Oklahoma Panhandle, and (c) Sherman and Hansford Counties in northwest Texas. These fields together constitute one of the largest known reserves of natural gas.

The conclusions stated herein regarding the reserves of these fields are based upon engineering and geological studies we have made of both of these fields since they each became important as a source of supply of natural gas, including information made available to us in former detailed studies of your company's gas supply, and upon a recent study of both the Amarillo and Hugoton fields. Data regarding acreage controlled, wells owned or under gas purchase contracts, production of these wells and their pressure history have been furnished by officials of Panhandle Eastern Pipe Line Company.

Our most recent study of the Amarillo field indicates that the proven gas acreage covers an area of approximately 1,478,000 acres and that the recoverable gas reserves as of September 30, 1940 are not less than 17.0 trillion cubic feet. Your company owned on September [fol. 14245] 30, 1940 leases covering a total of 42,136 acres in the proven area of this field, this being approximately 2.85 per cent of the total proven area. Upon these lands there had been completed as of said date a total of 55 wells, 11 of which were completed subsequent to July 1939. The average closed pressure of 40 of these wells in June 1937 was 378.9 pounds. The closed pressure in July 1940 of these 55 wells was 358.9 pounds indicating an average pressure drop of 20.0 pounds in a three-year

period. The production of these wells from January 23, 1937 to September 22, 1940, a period of 3 years and 8 months, totaled 55,093,000 M cubic feet or an average production of more than 2 billion cubic feet per pound drop in pressure.

Your company owned gas purchase contracts as of September 30, 1940 covering 23,393 acres in the proven area of the Amarillo field upon which there had been completed a total of 53 wells. Thirty-eight of these wells had an average pressure in June 1937 of 311 pounds and the average of the 53 wells in June 1940 was 308 pounds. During the period from January 23, 1937 to September 22, 1940 these wells had delivered a total of 49,908,000 M cubic feet.

It is evident from the very substantial production obtained with a modest decline in pressure that the acreage upon which your company controls its gas supply in the Amarillo field has a very substantial productive capacity. The total proven acreage controlled through leasehold and through gas purchase contracts, namely 65,529 acres, is equal to about 4.43 per cent of the total proven area of the Amarillo field. It is our judgment that your company thus controls approximately this percentage of the total recoverable reserve, that is, approximately 750 billion cubic feet.

Of the company owned leases held on September 30, 1940 covering a total of 42,136.30 acres of proven gas lands in the Amarillo field, 30,005.7 acres are classed as producing acreage, having a proven gas reserve which we estimate at 361,769,000 M cubic feet. The remaining owned proven leaseholds, totalling 12,130.6 acres are classed as unoperated, and have an estimated gas reserve [fol. 14246] which we estimate at 146,254,000 M cubic feet. The gas purchase contracts owned by your company September 30, 1940, covering gas purchases in the Amarillo field, control the gas under 23,393 proven acres, all classed as operated and having a proven reserve which we estimate at 241,977,000 M cubic feet.

Our most recent study of the Hugoton field indicates the proven and semi-proven area to be not less than 2,000,000

acres and the total recoverable gas reserve as of December 31, 1939 to be not less than 15 trillion cubic feet. In the proven or semi-proven portion of this field your company owns full-interest leases covering 175,030 acres, also one-half interest in an additional 18,428 acres. The gas supply from the unowned one-half interest is under contract to your company, hence the reserves under 193,458 acres are thus controlled.

Your company owned as of September 30, 1940, 33 wells on its wholly-owned Hugoton leasehold acreage. The average pressure of 26 of these wells in June 1937 was 421 pounds and the average pressure of the 33 wells in July 1940 was 414 pounds. During the period from January 23, 1937 to September 22, 1940, these wells produced 11,384,000 M cubic feet.

On September 30, 1940 there had been completed 34 wells on the 18,428 acres in which your company owned one-half interest. Twenty-four of these wells had an average pressure in June 1937 of 415 pounds and the 34 wells had an average pressure in July 1940 of 411 pounds. During the period January 23, 1937 to September 22, 1940 these wells produced a total of 11,876,000 M cubic feet.

The company owned full-interest leases covering a total of 175,030.25 acres in the proven or semi-proven portion of the Hugoton field, include 19,090.95 acres classed as operated, and have a proven gas reserve estimated by us at 126,189,000 M cubic feet. The remaining 155,939.30 acres of full-interest leases are classed as unoperated, and have gas reserves estimated by us at 1,030,739,000 M cubic feet.

The fifty per cent interest owned by your company in [fol. 14247] 18,428 acres of proven or semi-proven leasehold property includes a total of 17,320 acres classed as operated, and have a gas reserve estimated by us at 114,483,000 M cubic feet. The remaining 1,108 acres are classed as unoperated and have an estimated gas reserve of 7,324,000 M cubic feet.

Your company owned on September 30, 1940 gas purchase contracts controlling 33,475 acres in the Hugoton field upon which there had been completed 68 gas wells. Fifty of these wells had an average pressure in June 1937 of 420 pounds and 67 wells had an average pressure in July 1940 of 415 pounds. These wells produced during the period January 23, 1937 to September 30, 1940 a total of 24,919,000 M cubic feet. These 33,475 acres are classed as operated and have a proven reserve which we estimate at 221,265,000 M cubic feet.

The total proven or semi-proven acreage controlled by your company in the Hugoton field through leasehold and gas purchase contracts on September 30, 1940 was 226,933 acres. This is more than 10 per cent of the total proven and semi-proven area as now defined. It is our judgment that your company thus controls gas reserves as of September 30, 1940 in the Hugoton field of not less than 10 per cent of the total reserve of said field, that is, not less than 1.5 trillion cubic feet.

Both the Amarillo and Hugoton fields constitute reservoirs of gas from which gas withdrawals will not necessarily be proportional to the reserves controlled by various producers. The reserves are, we believe, sufficient to meet the combined anticipated requirements for pipe line, carbon black and other uses for a period of more than 25 years.

The combined gas supply controlled by your company in the Amarillo and Hugoton fields is, in our judgment, adequate to supply its present markets and any reasonably anticipated increase in the gas requirements of said markets for a period of more than 25 years.

Very truly yours,

RALPH E. DAVIS, INC.,
By Ralph E. Davis,
President.

[fol. 14251] Exhibit 77

Michigan Gas Transmission Corporation,
Description of Physical Property.

[fol. 14252] Statement of Qualifications and Experience of George S. Young.

1. Name, address, and age:

George S. Young, Detroit, Michigan; age 42.

2. Present position:

Vice-President, Michigan Gas Transmission Corporation.
Director, Michigan Gas Transmission Corporation.

3. Education:

1920—Graduated from the United States Naval Academy.
1927—Graduated from Columbia University with a degree of Master of Science.

4. Business experience:

1920 to 1930—After graduation from the United States Naval Academy in 1920, I was engaged in the performance of various duties, mostly of a technical nature, in various types of naval vessels until 1925 when I was given an opportunity to take post-graduate work in engineering which was completed in 1927. Thereafter and until 1930, when I left the Navy, I performed engineering duties on board a battleship.

1930 to 1934—I entered the employment of the Columbia Engineering and Management Corporation, a subsidiary of the Columbia Gas & Electric Corporation, and continued in its employ until 1933, when the Columbia Engineering Corporation, also a Columbia Gas and Electric Corpor-

ation subsidiary, was organized and replaced the Columbia Engineering and Management Corporation. While in the [fol. 14253] employment of these Corporations, I was engaged chiefly in making engineering studies of natural gas projects and in the design, construction and operation of natural gas transmission facilities.

1934 to 1936—Upon the liquidation of the Columbia Engineering Corporation in 1934, I was transferred to the United Fuel Gas Company, Charleston, West Virginia, also a subsidiary of the Columbia Gas & Electric Corporation. I was engaged, while in the employment of the United Fuel Gas Company, in the same type of work, that is, making engineering studies of natural gas projects and in the design, construction and operation of natural gas transmission facilities.

1936—In 1936, I was employed by the Panhandle Eastern Pipe Line Company, Kansas City, Missouri, temporarily to assist in the design and construction of compressing stations which were built in 1936 between the Texas Panhandle Gas Field and the Illinois-Indiana State Line to increase the capacity of the Panhandle Eastern Pipe Line Company's system to deliver gas to the Indiana and Detroit Markets, which had been acquired by the Panhandle Eastern Pipe Line Company.

1936 to 1941—Upon completion of my temporary employment by the Panhandle Eastern Pipe Line Company, I was employed by the Michigan Gas Transmission Corporation, a subsidiary of Columbia Gas & Electric Corporation, as General Manager and established offices in Detroit on June 1,

1936. Except for a brief tour of duty in the United States Navy in 1941, I have [fol. 14254]. been employed by Michigan Gas Transmission Corporation since June 1, 1936. In December 1936, I was elected Vice President of the Michigan Gas Transmission Corporation and in May 1940, a Director. During this period of employment, I had some responsibility in connection with the construction of 231.23 miles of 22" O. D. pipe line and river crossings between Zionsville, Indiana, and Melvindale, Michigan. I have been responsible for the construction of all other additions to the Michigan Gas Transmission Corporation's property, for its operation and have personally conducted sales negotiations.

[fol. 14255] Preliminary Statement:

This exhibit is intended to present a general description of the physical properties of the Michigan Gas Transmission Corporation, its sources of supply, and the markets served. The description and schedules presented herewith cover only the major items installed as of June 30, 1941, and do not constitute an inventory of the Corporation's property.

General Description.

In 1931 Panhandle Eastern Pipe Line Company extended its main transmission line to the east bank of Raccoon Creek in the State of Indiana. The Indiana Gas Transmission Corporation was organized February 8, 1931, and as of September 15, 1931 acquired from Panhandle Eastern Pipe Line Company the pipe line in the State of Indiana which consisted of 25.89 miles of constructed 20" pipe line and 1.12 miles of $10\frac{3}{4}$" O. D. multiple crossings under the Wabash River and Raccoon Creek. At the same time, the Indiana Gas Transmission Corporation acquired 20.5 miles of 20" pipe and other materials with which to extend the pipe line which it acquired from Panhandle Eastern Pipe Line Company.

As of November 25, 1931, Indiana Gas Transmission Corporation acquired from the Ohio Fuel Gas Company services for the completion of approximately 20.5 miles of pipe line (the pipe and materials for which were acquired from Panhandle Eastern Pipe Line Company, as previously described in this statement), 23.70 miles of 20" pipe line, and 52.08 miles of 18" pipe line. This pipe line was still under construction when taken over by Indiana Gas Transmission Corporation but was completed shortly thereafter. The 20" pipe line belonging to the Indiana Gas Transmission Corporation then extended 71.21 miles from the Illinois-Indiana State Line to a point south of Zionsville, In- [fol. 14256] diana, and from this point, the 18" pipe line extended to Muncie, a distance of 52.08 miles.

Connections were made by Indiana Gas Transmission Corporation in the ensuing years to supply certain Public Utilities with natural gas for resale to Indiana communities in the vicinity of the pipe line.

In 1936 the Michigan Gas Transmission Corporation acquired through consolidation and merger all of the assets of Indiana Gas Transmission Corporation and constructed 228.78 miles of 22" O. D. pipe line and 2.47 miles of $12\frac{3}{4}$" O. D. multiple river crossings from Zionsville, Indiana to Melvindale, Michigan, to deliver gas for the account of Panhandle Eastern Pipe Line Company to the Detroit City Gas Company, now Michigan Consolidated Gas Company, for distribution in the Detroit area.

Subsequently:

1. Lateral pipe lines were constructed to deliver gas purchased from Panhandle Eastern Pipe Line Company to the Northern Indiana Public Service Company, Public Service Company of Indiana, and Kokomo Gas and Fuel Company for resale in Indiana communities.

2. Connections were made to deliver gas for the account of Panhandle Eastern Pipe Line Company to Toledo Edison Company, Ohio Gas, Light and Coke Company, Central States Natural Gas Company, Incorporated for resale in Ohio communities and to the Michigan Consolidated Gas Company for resale in Ann Arbor, Michigan.

Seventy-one communities in Indiana having a population of nearly one-half millions are served with gas pur-
[fol. 14257] chased by Michigan Gas Transmission Corporation and sold to Public Utilities for distribution in those communities. Gas is delivered by Michigan Gas Transmission Corporation for the account of Panhandle Eastern Pipe Line Company to Public Utilities for distribution in forty communities in Ohio and Michigan having a population of nearly two millions.

The Michigan Gas Transmission Corporation system today, including lateral pipe lines, consists of four hundred and ninety-six miles of pipe of various sizes, has three compressor stations, forty-five regulating and measuring stations, as well as necessary warehouses and auxiliary structures. The Corporation also operates and maintains approximately thirty-one miles of 16" O. D. main pipe line and fifty-five miles of lateral pipe line in the states of Indiana and Ohio, which are the property of customers and affiliated companies, to transport natural gas for distribution in certain communities in Indiana and Ohio.

Source of Supply:

Michigan Gas Transmission Corporation secures its supply of natural gas from the Panhandle Eastern Pipe Line Company at the terminus of its present pipe line system at the Illinois-Indiana State Line in the vicinity of Dana, Indiana.

Description of Main Line:

Michigan Gas Transmission Corporation's main pipe line system extends from the terminus of the Panhandle Eastern Pipe Line in a generally easterly direction to the vicinity of Zionsville, Indiana, at which point two pipe lines diverge, one extending generally northeasterly to Melvindale, Michigan, and one in a general easterly di-
[fol. 14258] rection to Muncie, Indiana. The original and loop lines are described in sections as follows:

1. Illinois-Indiana State Line to Montezuma Compressing Station.

2. Montezuma Compressing Station to Zionsville Compressing Station.

3. Zionsville Compressing Station to Muncie, Indiana.

4. Zionsville Compressing Station to Edgerton Compressing Station.

5. Edgerton Compressing Station to Melvindale, Michigan.

State Line to Montezuma:

The original pipe line from the Illinois-Indiana State Line to the west header of the Wabash River crossing consists of 8.15 miles of 20" O. D. x 5/16" wall, single random length, lapwelded pipe, welded and coupled. The submerged river crossing consists of five 10¾" O. D. lines, each 4,473 feet long, solid welded from header to header. The distance between headers is .84 miles. The original pipe line extends 1.28 miles from the east bank of the Wabash River to Montezuma Compressing Station and this section consists of 20" O. D. x 5/16" wall, single random length, lapwelded pipe, welded and coupled.

The loop pipe line from the Illinois-Indiana State Line to the west header of its crossing of the Wabash River consists of 4.19 miles of 24" O. D. x ⅜" wall and 3.97 miles of 24" O. D. x 5/16" wall, double random length, seamless pipe with a coupling at approximately every second joint. The submerged river crossing is .84 miles in length between headers and consists of two lines between headers. The two lines in the river bed consist of a total of [fol. 14259] 6,695 feet of 16" O. D. x ⅜" wall and 2,221 feet of 16" O. D. x ½" wall, double random length, seamless pipe solid welded from header to header and buried under the bed of the river.

The 1.27 miles of loop line extending from the east bank of the Wabash River to Montezuma Compressing Station consists of .23 miles of 24" O. D. x 9/32" wall and 1.04 miles of 24" O. D. x 5/16" wall, double random length, seamless pipe with coupling at approximately every second joint.

Montezuma to Zionsville:

The original pipe line extending from Montezuma Compressing Station to the west header of the Raccoon Creek Crossing consists of 16.46 miles of 20" O. D. x 5/16" wall, single random length, lapwelded pipe, welded and coupled. The Raccoon Creek multiple crossing is .28 miles in length between headers and consists of four 10¾" O. D. x ½" wall lines, each 1,490 feet long, double random length, seamless pipe completely welded from header to header. Check valves are installed on the east bank in each of the four lines. The original pipe line between the east header of the Raccoon Creek crossing and Zionsville Compressing Station consists of 20.5 miles of 20" O. D. x 5/16" walls and 23.42 miles of 20" O. D. x 9/32" wall, double random length, seamless pipe, welded and coupled.

The 60.70 miles of loop pipe line between the Montezuma and Zionsville Compressing Stations consists of 5.92 miles of 24" O. D. x 9/32" wall and 54.78 miles of 24" O. D. x 5/16" wall, double random length, seamless pipe with a coupling at approximately every second joint.

Zionsville to Muncie:

The main pipe line extending from Zionsville Com- [fol. 14260] pressing Station to the west bank of the White River consists of .28 miles of 20" O. D. x 9/32" wall, and 11.22 miles of 18" O. D. x 9/32" wall, double random length, seamless pipe, welded and coupled. The submerged White River crossing is .11 miles in length between headers and consists of four lines, each 566 feet long of 10¾" O. D. x ½" wall, double random length, seamless pipe completely welded from header to header. From the east header of the White River crossing to Muncie, the line consists of 40.75 miles of 18" O. D. x 9/32" wall, double random length, seamless pipe, welded and coupled.

Zionsville to Edgerton:

The main pipe line extending from Zionsville Compressing Station to Edgerton Compressing Station consists of 107.56 miles of 22" O. D. x 5/16" wall, double random length seamless pipe with a coupling at approximately

every second joint and 1.07 miles of river crossing, each crossing consisting of four lines of 12¾" O. D. double random length, seamless pipe, completely welded between headers.

The distance from Zionsville to the south header of the Mississinewa River crossing is 53.10 miles.

The Mississinewa River crossing is .26 miles in length between headers and there are 1,036 feet of 12¾" O. D. x ⅜" wall and 357 feet of 12¾" O. D. x ½" wall pipe in each of the four lines. Check valves were installed in each line adjacent to the north header.

There are 27.38 miles of 22" O. D. pipe between the north header of the Mississinewa and south header of the Wabash River crossings.

The Wabash River crossing is .36 miles in length between [fol. 14261] headers. There are 1,653 feet of 12¾" O. D. x ⅜" wall and 240 feet of 12¾" O. D. x ½" wall pipe in each of the four lines.

There are 13.34 miles of 22" O. D. pipe between the north header of the Wabash River crossing and the south header of the St. Marys River crossing.

The St. Marys River crossing is .45 miles in length between headers. There are 2,435 feet of 12¾" O. D. x ⅜" wall and 248 feet of 12¾" O. D. x ½" wall pipe in each of the four river crossing lines.

There are 13.74 miles of 22" pipe between the north header of the St. Marys river crossing and Edgerton Compressing Station.

Edgerton To Melvindale:

The main pipe line between Edgerton Compressing Station and its terminus in Melvindale, Michigan, consists of 121.22 miles of 22" O. D. x 5/16" wall, double random length, seamless pipe with coupling at approximately every second joint, and 1.40 miles of river crossings, each crossing consisting of four lines of 12¾" O. D. double random length, seamless pipe, completely welded between headers. Of the 22" O. D. main line, .36 miles were laid in Indiana, 66.95 miles in Ohio, and 53.91 miles in Michigan.

There are 24.51 miles of 22" O. D. pipe between Edgerton Compressing Station and the south header of Maumee River crossing, .36 miles of which are in Indiana and 24.15 miles in Ohio.

The Maumee River crossing is .25 miles in length between headers and there are 1,071 feet of 12¾" O. D. x ⅜" wall and 240 feet of 12¾" O. D. x ½" wall pipe in each of the four river crossing lines.

[fol. 14262] There are 3.72 miles of 22" O. D. pipe between the north header of the Maumee River crossing and the south header of the Tiffin River crossing.

The Tiffin River crossing is .40 miles in length between headers and each of the four river crossing lines consists of 1,763 feet of 12¾" O. D. x ⅜" wall and 320 feet of 12¾" O. D. x ½" wall pipe. Check valves are installed in each of the river crossing lines adjacent to the north header.

There are 62.82 miles of 22" O. D. pipe between the north header of the Tiffin River crossing and the south header of the Raisin River crossing, 39.08 miles of which are in Ohio and 23.74 miles in Michigan.

The Raisin River crossing is .58 miles in length between headers and each of the four lines consists of 2,566 feet of 12¾" O. D. x ⅜" wall and 508 feet of 12¾" O. D. x ½" wall pipe. Check valves are installed in each of the river crossing lines adjacent to the north header.

There are 14.36 miles of 22" O. D. pipe between the north header of the Raisin River crossing and the south header of the Huron River crossing.

The Huron River crossing is .17 miles in length between headers and each of the four river crossing lines consists of 717 feet of 12¾" O. D. x ⅜" wall pipe and 183 feet of 12¾" O. D. x ½" wall pipe.

There are 10.85 miles of 22" O. D. pipe from the north header of the Huron River crossing to the Detroit Regulator Station in Allen Park, Michigan, and 4.96 miles of [fol. 14263] 22" O. D. pipe line from this point to the terminus of the line at the Detroit Measuring Station in Melvindale, Michigan.

Compressing Stations:

As previously stated, Michigan Gas Transmission Corporation owns three compressing stations and Schedule 1 attached hereto lists those stations, shows the dates of the initial construction and additions, and the compressing horsepower installed.

Distance Between Stations:

The pipe line mileages between the compressing stations and other points are as follows:

	Original Line	Loop Lines
1. State line to Montezuma	10.27	10.27
2. Montezuma to Zionsville	60.66	60.70
3. Zionsville to Muncie	52.36	—
4. Zionsville to Edgerton	108.63	—
5. Edgerton to Melvindale	122.62	—

River Crossings:

As already stated and described, multiple pipe line submerged crossings are used where the pipe line passes under principal creeks and rivers. The multiple pipe lines are installed at these points to avoid, so far as possible, lengthy interruption of service which might result if a single line was installed. Each river crossing pipe line is provided with valves at each header to be used to isolate the line in event of a break. If required, the pipe lines are [fol. 14264] fitted with river clamps to prevent the pipe from floating. As already stated, check valves are installed near the downstream headers at certain crossings to bottle as much of the gas as possible in the line in event of a pipe line break.

Lateral Lines:

In addition to the main pipe line system, the Michigan Gas Transmission Corporation owns and operates 57.98 miles of lateral pipe lines of various sizes and lengths, 57.91 miles in Indiana, .05 miles in Ohio, and .02 miles in Michigan. The Corporation also operates and maintains approximately fifty-five miles of lateral lines in Indiana and Ohio which are the property either of the public utilities to whom it sells gas or to whom it delivers gas for the

account of Panhandle Eastern Pipe Line Company, or the Ohio Fuel Gas Company.

The lateral pipe lines owned vary in size from two to six inches in diameter and from a few feet to over nineteen miles in length. Some of these lateral lines are equipped with a main line regulator setting to control the pressure in the lateral line itself. At each delivery point additional equipment is installed to effect further pressure regulation and to measure deliveries to the customers.

Protective Measures:

The 20" O. D. main pipe line from the Illinois-Indiana State Line to Raccoon Creek is protected against corrosion for its entire length by a paint coating. Between Raccoon Creek and Zionsville 2.06 miles of protective coating was applied to the 20" O. D. main pipe line where the pipe was laid in soil shown to be of a corrosive nature. Between [fol. 14265] Zionsville and Muncie 2.38 miles of the 18" main pipe line was similarly protected. The entire length of the 24" O. D. loop between the Illinois-Indiana State Line and Zionsville is covered with a protective coating of paint. The 22" O. D. main pipe line between Zionsville and Melvindale, Michigan, is coated for 186.90 miles of its length. All of the lateral pipe lines constructed since 1936 have been covered with a protective paint coating.

A minimum cover of 30" has been employed in the construction of the pipe lines. To avoid sharp pipe bends, the pipe is laid deeper at necessary locations at river and creek banks and in rough country. To protect the soil covering against erosion where the terrain is rough, numerous breakers and spillways of stone and concrete have been constructed.

The pipe lines through creeks, rivers and wet ground are weighted with weight clamps or concrete to prevent the pipe from floating to the surface. At locations where the pipe is bent, concrete blocks have been installed to balance the pipe thrust.

Valves were installed in the main lines at an average interval of approximately six miles. Each such valve setting is equipped with by-pass and blow-off connections.

These valves are used for sectionalizing the pipe line, a procedure normal to the operation and maintenance of gas transmission pipe lines.

Advantages of Loop Lines:

The original pipe line between the Illinois-Indiana State Line and the Zionsville Compressing Station, a distance of approximately seventy-one miles, is completely looped with a 24" O. D. pipe line to increase capacity. At each of the sectionalizing valves and on both banks of the Wabash [fol. 14266] River crossing, crossover connections are provided, thus making it possible to operate the lines with one or more sections of either pipe line isolated, which aids greatly in the maintenance of uninterrupted service.

Route of Gas:

Natural gas, from which the natural gasoline has been extracted and which has been dehydrated, is received by the Michigan Gas Transmission Corporation from the Panhandle Eastern Pipe Line Company at the Illinois-Indiana State Line. The gas moves eastward to Montezuma Compressing Station where, in part, it is compressed and transported to the Zionsville Compressing Station. Gas distributed in the Muncie area is transmitted past the Zionsville Compressing Station without recompression. At Zionsville the deliveries made from the 22" O. D. pipe line extending to Melvindale, Michigan, are recompressed and transported, in part, to Edgerton Compressing Station. At Edgerton the gas is again recompressed into the line extending to its terminus in Melvindale, Michigan.

Communication System:

The Michigan Gas Transmission Corporation does not own a communication system but depends on Western Union, Postal Telegraph, and the Bell Telephone System for communication.

Communities Served:

Schedule 2 attached hereto lists the principal communities served directly by the Michigan Gas Transmission

Corporation in Indiana with gas purchased from Panhandle Eastern Pipe Line Company and the principal communities in Ohio and Michigan to which gas is delivered for the account of Panhandle Eastern Pipe Line Company. [fol. 14267] Communities to be Served Soon:

Contracts have been signed by the Panhandle Eastern Pipe Line Company with public utilities owning distribution systems in Richmond and Greenfield, Indiana, to supply gas for these communities. The Michigan Gas Transmission Corporation will transport this gas for the account of Panhandle Eastern Pipe Line Company from the Illinois-Indiana State Line to the point of delivery in each case.

In addition, the Panhandle Eastern Pipe Line Company has contracted with public utilities owning distribution systems in Adrian, Albion, Battle Creek, Flint, Jackson, Kalamazoo, Owosso, Marshall, Pontiac, and more than eighty small communities in Michigan. Michigan Gas Transmission Corporation will transport this gas for the account of Panhandle Eastern Pipe Line Company from the Illinois-Indiana State Line to the point of junction with a pipe line system in Michigan to be constructed by the Panhandle Eastern Pipe Line Company.

Special Industrial Sales:

Contracts covering the sale of gas on an interruptible basis for industrial use are in force for sale to four public utilities for ultimate resale to sixteen special industrial consumers. Schedule 3 attached hereto is a list of these public utilities and shows the name and location of the special industrial consumers.

Compressing Station Equipment:

The size, type and capacity of the equipment in the different compressing stations varies to some extent, depending upon the requirements of the individual station, but is generally uniform. The attached Schedule 4 lists

the principal structures and the principal items of equipment in each of these stations.

[fol. 14268] Gas Measurement Equipment:

It is necessary in connection with the operation and maintenance of its forty-five regulating and measuring stations that the Corporation have equipment and tools especially suited to this work. A list of such equipment and tools is presented in Schedule 5.

Warehouses and Equipment:

The Transmission Department must at all times have on hand at strategic and convenient points along its pipe line system adequate quantities of emergency equipment, material, and supplies to maintain uninterrupted service to its customers. Such emergency equipment, material, and supplies together with automotive equipment is stored in four warehouses. Schedule 6 is a list and description of these warehouses and the major items of equipment located at each.

Automotive Equipment:

The Corporation owns and operates a total of twenty-five trucks and automobiles. A list and description of these cars and the departments by which they are used is given in Schedule 7.

Classifications of Pipe:

The attached Schedule 8 is a summary of the pipe in the lines of the Michigan Gas Transmission Corporation system. This includes only the pipe laid and in use in main lines and laterals and does not include pipe or other material in stock. The Schedule classifies the pipe according to use and size.

Photographs:

Schedule 9 is a collection of photographs showing typical structures and equipment in use by the Corporation. A notation on each photograph is self-explanatory.

[fol. 14269] Pipe Line Breaks:

At about 2:40 A. M. Eastern Standard Time, January 8, 1937, the 20" pipe line, which Michigan Gas Transmission Corporation had acquired through merger from the Indiana Gas Transmission Corporation, broke at a point 23.93 miles east of Montezuma Compressing Station. The pipe pulled out of a coupling located four feet from a mitre weld at the break of a bank. The pressure at Montezuma Compressing Station, when the break occurred, was 440 pounds per square inch guage. Repairs were completed at 12:55 P. M. Eastern Standard Time, January 10, 1937. The time required to repair the break was 58 hours and 15 minutes.

At 7:45 Eastern Standard Time, January 14, 1937, another break occurred at the break of a bank 2.33 miles east of the first break and, as in the case of the first break, the pipe pulled out of a coupling located four feet from a mitre weld. The pressure at Montezuma when this break occurred was 375 pounds per square inch guage. Repairs were completed at 11:00 P. M. Eastern Standard Time, January 15, 1937. The time required to repair the break was 27 hours and 15 minutes. In the case of each of these breaks, several hours were required after repairs were completed to purge the pipe line, start the compressing stations and raise pressures to the point where normal service could be resumed.

It became apparent, in view of the type of construction which had been employed, that this pipe line would not stay in the ground under all weather conditions when operated at a pressure of approximately 450 pounds per square inch guage. The Construction Superintendent in charge of the construction of the 20" pipe line east af [fol. 14270] Raccoon Creek, with whom the construction was discussed at a later date, stated that the pipe line had been constructed for an operating pressure of from 325 to 350 pounds per square inch guage.

Immediately after the first break, reinforcement of the pipe line was undertaken by placing sacks filled with a mixture of one part cement and six parts sand at points where overbends occurred. About 50,000 sacks were

placed. While this work was being done and after the second break occurred, the line pressure was not permitted to exceed 300 pounds and the necessary additional gas requirements during this period over and above the line capacity at an operating pressure of 300 pounds per square inch guage were obtained from the Ohio Fuel Gas Com- [fol. 14270] pany.

On January 23, 1937, pressure was raised to 325 pounds per square inch guage and on January 30, 1937, to 375 pounds per square inch guage, which was not exceeded during the balance of the winter period of 1936-37.

In order to permit operation of the line at a pressure of 450 pounds per square inch guage, it was decided to weld straps over the couplings which were located near bends in the pipe line and to place additional weight in the form of concrete at points where there were sharp overbends.

It was found also that where the 20" pipe line crossed Walnut Creek, it had been laid on the bed of the creek and there were two couplings under water. Split welding sleeves were welded over these two couplings and the line was anchored to the bed of the creek with straps and concrete anchors.

Since reinforcement of the line was completed, no further difficulty has been experienced with it when operating [fol. 14271] at a pressure of 450 pounds per square inch guage.

The following are approximate costs of each of the four operations beforementioned which were charged to Fixed Capital:

1. Weighting with sacks filled with a mixture of one part cement and six parts sand	$39,800
2. Strapping Couplings	14,060
3. Weighting with concrete	10,400
4. Reinforcing Walnut Creek Crossing	14,900
Total	$79,160

The cost of repairing the breaks was charged to operating expenses in the amount of $7,052.64.

During the period that these breaks occurred, the Detroit City Gas Company, now Michigan Consolidated Gas Company, produced 873,846 therms of 980 B.t.u. carbureted water gas and Michigan Gas Transmission Corporation paid Michigan Consolidated Gas Company $71,443.35 which was represented as the increment cost to Michigan Consolidated Gas Company of manufacturing gas during the emergency period. This amount was charged to operating expense.

[fol. 14314] Exhibit 80.

Report of Inspection by H. C. Lehn* of Equipment in the Compressor Stations of the Michigan Gas Transmission Corporation.

The Worthington Pump and Machinery Corporation received a request from the Michigan Gas Transmission Corporation to furnish the services of an engineer for an inspection of the equipment in their compressor stations to determine the ratio between the value of the equipment when installed and its value as of June 30, 1941. The writer having been selected, visited the stations, inspected the equipment, and examined the station records on September 26th, 1941.

The main compressor equipment on this pipe line consists of horizontal, double acting, four cycle, twin tandem gas engines direct connected to the compressor cylinders, and in units of 1300 rated B.H.P. each. This is the standard type of equipment used generally in the main line compressor stations throughout the country.

There are three stations on the line which in the order of the dates of their construction and of their sequence in the direction of gas flow are located as follows:

#1—Near Montezuma, Indiana

#2—Near Zionsville, Indiana

#3—Near Edgerton, Indiana

It happened to be convenient to visit the stations in the reverse order, and the results of the inspection will be given in the latter order.

*Consulting Engineer, Worthington Pump and Machinery Corporation, Buffalo, N. Y.

[fol. 14315] The procedure used in making the inspection was as follows: The external parts of the engines and other equipment were examined for evidence of defects or deterioration, and the character of operation of those units in service carefully noted. The station records

were then examined for hours of operation and amount of wear of the moving parts.

Before describing the detail findings, attention must be brought to some general conditions applying equally to all of the stations. While all are comparatively new, and Edgerton in particular has only been in operation eight months, so that normally no great physical deterioration should be observable, the condition of all of the equipment was remarkable in its lack of visible evidence of the actual length of service. While carefully searched for, no leaks of gas, water or oil were discovered on the main floors or in the basements. Frequent protective painting, some of which was in progress at the time of the inspection has contributed to maintaining the original condition and all parts scrupulously clean. In the writer's thirty-five years of experience he has not seen stations superior to these, in general fine appearance and evidence of careful and continuous maintenance. The staff is to be highly commended for producing and maintaining the conditions found.

Proceeding to the detail findings, it is evident from the foregoing that few definite or specific items of deterioration can be recorded.

[fol. 14316] Edgerton Station: The main compressing equipment consists of three 1300 H.P. units in service as required, and two duplicate units in process of installation. This station was put in operation December 17, 1940, and on the date of inspection the station records showed that the units had operated the following number of hours:

#1—1084

#2—1094

#3—1062

None were in operation at the time of the inspection, not being required. This station is for all intents and purposes new. The total hours of operation are insufficient to develop appreciable wear of the moving parts, or to dismantle for the customary routine periodic inspection and overhaul. Nothing was found to mark down as deterioration at this station.

The auxiliary equipment consists of two 180 H.P. vertical six cylinder, four cycle gas engines with direct connected generators for station electric power, and the usual motor driven pumps, gas fired boiler for station heating, etc.

Some wear has developed in the main bearings of the power units, otherwise the units are in their original condition. No deterioration observable, or on the station records on the remainder of the auxiliary equipment.

Zionsville Station: The main compressor equipment consists of five 1300 H.P. units, four of which were installed in 1937, and one in 1940. As of the date of inspection the station records showed the following operating hours:

[fol. 14317]

#1—11908
#2—14382
#3—13166
#4— 9708
#5— 3581

Two units were in operation at the time of inspection. These were running quietly, no noise being detected at any of the bearings, indicating correct bearing clearance.

Cylinder liner wear on all units as shown by the station records was normal for the hours of operation, and showed the usual decrease in rate after the first few hours.

Piston rod wear recorded was also normal for the operating period and negligible in amount.

Auxiliary equipment: There are three gas engine-electric units, duplicate of those at Edgerton stations, two installed in 1937 and one in 1940. Some main bearing wear recorded and one piston and liner worn and replaced. Some valve guards and inserts worn and replaced. On the power pumps sleeves and collars were worn.

Montezuma Station: The main compressor equipment consists of six 1300 H.P. units of which two were being installed in 1936, two in 1937, and two in 1940, these lat-

ter being #1 and #6. As of the date of inspection, the station records show the following total operating hours:

[fol. 14318]

#1—2508
#2—21283
#3—21810
#4—20168
#5—19125
#6—3927

Three units were in operation at the time of inspection. The same conditions of quite operation indicative of correct bearing adjustment were found as at Zionsville station. The periodic overhaul on this station had recently been completed. It was not necessary to take up any of the bearings. The total bearing take up on any engine in four years is 2 '1000".

With one exception, liner and piston rod wear is, like Zionsville Station, normal for the period of operation. The exception is one cylinder, which shows greater wear, but not sufficient yet to require a new liner.

Auxiliary Equipment: This is practically a duplicate of that at Zionsville. The recent overhaul showed normal wear on bearings. One set of piston rings was replaced in power unit #2. Unit #3 was in process of overhaul at the time of inspection.

Outside Equipment: At all of the stations including exhaust mufflers, gate valves and piping above ground, cooler piping, showed no signs of deterioration.

From the foregoing it is evident that physical deterioration has caused little or no depreciation.

[fol. 14319] The power of the main compressor units is developed by horizontal, reciprocating, moderate speed, prime movers, and the principal features of their design were established in the first gas engine compressor units built forty years ago. In comparison with some other types the horizontal unit, in addition to its high economy and its being peculiarly adapted to the service, is of great

durability and corresponding low cost of maintenance. This is evidenced by the fact that the original three engines of the type built in 1901-02 are still in service as well as many others built in the early years. Since these first few units were built there has been considerable improvement in detail design and materials used and at the present time the type has reached a high degree of excellence as to detail but there has been no change in the principal features of design and little increase in efficiency. Reasons for the long useful life lie in the comparatively low speed, and in the fact that a great percentage of the weight and initial cost is in parts not subject to stress fatigue or wear, compared to more recent higher speed units. For example, in these units the moving parts are approximately 12% of the total weight, while in a modern length speed vertical diesel or gas engine they are approximately 21%. These weights of moving parts do not include the flywheels.

The company which I am connected with has built in the past forty years over 550 units of this type, totalling over 500,000 H.P. With few exceptions, these engines are all running at the present time. Some are out of service by reason of the gas becoming exhausted at their original location and not being required elsewhere. A number have been moved to different locations, in some cases two [fol. 14320] or three times. To my knowledge none have been abandoned due to their being worn out.

From my personal knowledge of the long life of this type of engine, and from the condition of the units inspected, and their total hours of service, I estimate the ratio of their present to their initial value as follows:

Edgerton: This station has had too few hours of operation to consider depreciation. In fact its value might be said to have increased since its initial start as its efficiency is higher, and at least part of the running in time and expense has been incurred. However, the station will not endure forever, and time has passed, so this station will be depreciated to 99%.

Zionsville: 97%

Montezuma: 96%

Auxiliary Equipment: in which is included all equipment other than the main units. This equipment is of a different type; of shorter life, and I estimate its present value ratio as follows:

Edgerton: As in the case of the main equipment and for the same reasons, 99%

Zionsville: 96%

Montezuma: 95%

Mr. G. S. Young, Vice President
Michigan Gas Transmission Corporation
1316 United Artists Building
Detroit, Michigan

Dear Mr. Young:

Enclosed herewith is a copy of the pipe inspection report covering 37 locations where the pipe was exposed for inspection on the property of the Michigan Gas Transmission Corporation in Ohio, Indiana, and Michigan.

This report is complete except for the strip maps of Lines, A, B, and C on which the pipe exposure locations were identified. I remain,

Yours very truly,

H. S. RIDDLE
Gas Engineering Department

[fol. 14370] Michigan Gas Transmission Corporation.

Accrued Depreciation

Compressor Station Structures

Measuring and Regulating Station Structures and Equipment

Other Transmission System Structures

General Equipment

The following is an explanation of the procedure followed in determining the extent of existing accrued depreciation on the property of the Michigan Gas Transmission Corporation included in the following accounts:

Account 352.1—Compressor Station Structures and Improvements

Account 352.2—Measuring and Regulating Station Structures and Improvements

Account 352.3—Other Transmission System Structures

Account 354.1—Compressor Station Equipment
Water Tanks and Foundations (only)
Cooling Towers and Foundations (only)

Account 354.2—Measuring and Regulating Station Equipment

Account 372 —Office Furniture and Fixtures

Account 373 —Transportation Equipment

Account 374 —Stores Equipment

Account 377 —Tools and Work Equipment

Inspections of the property were made by the witness, accompanied by his principal assistant, on August 13 and 14, and by the witness on September 26, 1941. On both occasions Mr. C. D. Alsfadt, Superintendent of Transmission, Michigan Gas Transmission Corporation, accompanied the inspection party.

The buildings and structures at Montezuma, Zionsville, and Edgerton were inspected in detail. These structures comprise all of the compressor station and miscellaneous transmission system structures on the property. In addition, measuring and regulating station structures and equipment were inspected, aggregating in excess of 75 per cent of the investment in structures and 65 percent of the [fol. 143711] investment in equipment. In the course of these inspections, and as a result of considerable time spent in the company's offices both at Detroit, Michigan and Fort Wayne, Indiana, practically all of the general equipment, such as furniture, was seen or examined.

Virtually all of the structures have been built or installed since 1936 and, therefore, are comparatively new and of the most modern type of construction. Montezuma compressor station was constructed in 1936 and important extensions and additions were made in both 1937 and 1940; Zionsville compressor station was constructed in 1937, with important extensions and additions in 1940; and Edgerton compressor station was constructed in 1940 and additions and extensions are now under construction.

The witness has inspected many properties, including street railway, electric light and power, and artificial and natural gas properties, and has never seen an entire property in an equally high state of maintenance. Signs of age, wear, weathering, or deterioration were practically nonexistent. The entire property was clean and orderly, well painted, in excellent repair, well arranged, and gave evidence of exceptionally fine housekeeping.

Structures at Compressor Stations

In the inspection of the property at the compressor stations, little could be found indicating depreciation due to physical deterioration. The only evidences of depreciation were minor cracks in foundations and floors which could be repaired readily and which have little or no detrimental effect.

The structural steel framework, steel sash, glazing transite and steel siding and roofs, lighting, and, in fact, all [fol. 14372] other parts of the structures were physically in substantially 100 percent condition.

In arriving at condition percents for these structures, and for other property discussed below, consideration was given to the effect of wear and tear, action of the elements, the degree of serviceability, the state of maintenance, and obsolescence, as well as to the age and probable future life in use.

The high standard of maintenance obtaining on this property results in an almost complete lack of wear or deterioration. The condition of the property offers strong evidence supporting the fact that well maintained property deteriorates less rapidly in its early life than in later years.

The condition percents as set forth below give substantial consideration to age and are materially lower than could be justified by a consideration of physical condition alone.

The condition percents for the various stations are as follows:

	Condition Percent

Measuring and Regulating Station Structures and Equipment

The measuring and regulating station structures and the equipment, piping, valves, gauges, meters, etc. housed therein, showed little or no visible signs of deterioration and were found to be in the same high state of maintenance and excellent physical condition as was found for the compressor station structures.

The condition percents for the stations erected in various years are as follows:

[fol. 14374] General Equipment

The property included under this heading consists of office furniture and fixtures, storeroom equipment, automobiles, trucks, tractors, concrete mixers, portable pumps, and small tools. Such property has relatively short life. This equipment was found to be in very good physical condition, well maintained and repaired, and, for the most part, of recent purchase. In placing condition percents on much of this property, such as automobiles, trucks, calculating machines, typewriters, etc., consideration was given to the salvage or trade-in value which would probably be realized when the property was replaced or retired.

The condition percents for the general equipment accounts are as follows:

	Condition Percent
Account 372—Office Furniture and Equipment	78.0
Account 373—Transportation Equipment	71.0
Account 374—Stores Equipment	90.0
Account 377—Tools and Work Equipment	79.0

Engineer
122 South Michigan Avenue
Chicago

October 27, 1941

Mr. G. S. Young, Vice President
Michigan Gas Transmission Corporation
1616 United Artists Building
Detroit, Michigan

Dear Mr. Young:

Pursuant to your request, I have made an estimate of the cost of reproduction new of the plant and property of the Michigan Gas Transmission Corporation as of June 30, 1941.

This cost is exclusive of Working Capital, Materials and Supplies, Cost of Developing Business, and Going Value. Land and land rights are included at original costs as furnished to me by the company.

Reproduction costs were obtained by the application of cost indexes (prepared with especial reference to the vari-

ous items of this property) to the costs of such items at the time of installation.

In my opinion, the reproduction cost new as above outlined is $14,168,481. An explanation of the method used in the determination of this cost, together with details by accounts, is enclosed.

Yours very truly,

FRANCIS S. HABERLY.

[fol. 14379] Education and Experience.

My name is Francis S. Haberly. I live in Chicago, Illinois, and my profession is that of a consulting engineer. My offices are at 122 South Michigan Avenue, Chicago.

I was educated in grade and high schools at Fort Wayne, Indiana, completing the latter in 1914. This schooling was supplemented by intensive engineering study on my own part, together with extension courses in engineering and business administration. I was further benefited by practical experience as an apprentice in the student course of the General Electric Company at Fort Wayne, Indiana.

In 1916, following my student training, I entered the Engineering Department in the Fort Wayne and Northern Indiana Traction Company (now Indiana Service Corporation). After a summer spent as a laborer on construction and maintenance work, I became a draftsman and general assistant to the Engineer of Way and Structures and to the Superintendent of Overhead Construction. Later I became an assistant engineer, my duties consisting of design, surveys, and engineering for construction and maintenance of the track, structures and overhead. In 1917, under the personal direction of the President of the company, the late Robert M. Feustel, I made an appraisal of a large part of the company's street and interurban railway property.

Following two years in the Army as an officer of artillery, I joined the consulting engineering staff of Robert M. [fol. 14380] Feustel and was employed by him until he disbanded his organization in 1924, my duties being principally in connection with valuation and appraisal work. Such work included the following:

Indiana Service Corporation at Fort Wayne, Indiana in 1919. This was a repricing and bringing down to date of the appraisal which I had made in 1917 prior to my entry into the Army. This work was done largely by the use of indexes.

Nashville Railway and Light Company in Nashville, Tennessee in 1920. This was an inventory and unit cost appraisal of railway and light and power property. The original cost was also determined, partly upon the basis of book analysis and partly by the use of indexes.

Great Northern Paper Company, Millinocket, Maine in 1920. This was an inventory and unit price appraisal for tax purposes.

Philadelphia Rapid Transit Company, Philadelphia, Pennsylvania, in 1921 and 1922. This was an inventory and unit price reproduction cost appraisal with original cost being determined by detailed indexes. Mr. Feustel in this case represented the City of Philadelphia.

Frankford Elevated Company, Philadelphia, Pennsylvania in 1922. This work consisted of setting up property costs of the city-owned elevated.

Tennessee Electric Power Company, Chattanooga, Tennessee in 1923 and 1924. This was an inventory and unit price appraisal of street railway, light and power, and [fol. 14381] hydro-electric property. Reproduction costs at various other price levels were obtained by indexes.

In April, 1924 I took a temporary assignment as special assistant to the General Manager of the Tennessee Electric Power Company in matters connected with rate analysis, valuation and preparation of technical exhibits for court cases involving rates and valuation.

In December, 1924 I was employed by Mr. William E. Sloan, of Chicago, on valuations of the New England Telephone and Telegraph Company with property in five of the six New England States; the Cincinnati & Suburban Telephone Company and the Ohio Bell Telephone Company.

In May, 1926, following my work with Mr. Sloan, I was employed by the late Albert S. Richey and remained with him, first, as an employee and, later, as an associate, until his death in June, 1936. Mr. Richey was Professor of Electrical Engineering at Worcester Polytechnic Institute, at Worcester, Massachusetts, as well as a nationally-known engineering consultant.

During my association with Mr. Richey I was actively connected with or in responsible charge of the following appraisals:

United Traction Company, Albany, New York in 1926. This work consisted of checking an appraisal made by the

company and determining costs at various price levels by indexes. Mr. Richey, in this case, represented the City of Albany.

Nashville Railway and Light Company, Nashville, Tennessee in 1926 and 1927. This was an inventory and unit price appraisal of street railway and light and power prop-
[fol. 14382] erty on which I had worked in 1920 under Mr. Feustel. In this case Mr. Richey represented the State Commission.

The Tennessee Electric Power Company in 1927 and 1928. This was an inventory and unit price appraisal of property on part of which I had worked in 1923 under Mr. Feustel. The property included one street railway system, considerable hydro-electric property, electric generating, transmission, and distribution systems covering more than one-half of the state, and several water companies. It is this property which was sold to the T. V. A. and is now operated by it. Indexes were used on minor parts of this work. Mr. Richey, in this case, again represented the State Commission.

The Southern Public Utilities, in North and South Carolina, in 1929. This was an inventory and unit price appraisal of street railway, light and power, and gas property. For this work I took leave of absence from Mr. Richey and was employed by Jackson and Moreland, of Boston, Massachusetts.

In 1930 I returned to Mr. Richey's employ and made an inventory and unit price appraisal of that part of the Third Avenue Railway System located in Westchester County, New York. In 1931 this appraisal was repriced and brought down to date by means of indexes.

Other jobs of lesser importance during the period 1931 to 1935 included the following:

[fol. 14383] Toledo, Bowling Green and Southern Traction Company; Conestoga Traction Company, Conestoga,

Pennsylvania; Omaha and Council Bluffs Street Railway Company; Chicago, North Shore and Milwaukee Railroad Company; Ottawa Electric Railway Company; and Sioux City Gas and Electric Company. My work in this latter case consisted of the development of indexes for the gas property.

In 1933, an appraisal of the Louisville Gas and Electric Company, in Louisville, Kentucky, was made by the use of indexes. This work covered electric light and power, natural gas fields and gas transmission lines, artificial gas plants and the attendant distribution system.

Public Service Company of Northern Illinois in 1933. This was a valuation of light, power and gas property made by the use of indexes. An appraisal made by the application of unit prices to the same property, as of the same date, by other independent engineers, produced results differing by five percent.

Commonwealth Edison Company, Chicago District Electric Generating Corporation and Super-Power Company of Illinois, in Chicago, in 1934 to 1936. This was an appraisal of the electric light and power property in the City of Chicago in which reproduction cost was obtained by the application of detailed indexes to the original cost. An appraisal made by the application of unit prices to the Commonwealth Edison property, as of the same date, by other independent engineers, produced results differing by 1.7 percent.

[fol. 14384] Chicago Rapid Transit Company, Chicago, Illinois, in 1936. This was an appraisal made by the use of indexes for tax purposes.

The Peoples Gas Light and Coke Company in 1935 to 1938. This was an appraisal of the gas property in Chicago in which reproduction cost was obtained by the application of detailed indexes to the original cost. Here, again, an appraisal made by the application of unit prices to the same property, as of the same date, by other independent engineers, produced results differing by 1.6 percent.

In June, 1936 Mr. Richey died suddenly and I have since carried on the business under my own name. I continued such work of Mr. Richey's as was then in progress. This work consisted of presenting the testimony in The Peoples Gas Light and Coke Company case and of making a revaluation as of a later date.

Valuation work done by me since that time has included a tax valuation of a part of the Third Avenue Railway System in New York, in 1938; an inventory, including the setting up of property records, for the Montreal Light, Heat and Power Consolidated in Montreal, Quebec, in 1939 and 1940; and, in the same two years, an inventory and unit price appraisal of the properties of the Pittsburgh Railways Company for purposes of reorganization.

At the present time I am engaged in making appraisals of the property of the Chicago Rapid Transit Company, the Chicago Surface Lines, and the Chicago Motor Coach Company, all in Chicago. These last three named valua-
[fol. 14385] tions are being prepared by the application of indexes to previous appraisals or to original cost.

There are currently prepared in my office construction cost indexes of electric light and power, artificial gas, and electric railway properties which reflect the variation in construction costs of typical properties, exclusive of land, on a nation-wide basis.

I am a member of the American Institute of Electrical Engineers and a member of the American Transit Association.

[fol. 14386] Michigan Gas Transmission Corporation

Purpose of Exhibit and Methods Used

This exhibit is an estimate of the cost of reproduction new of the plant and property of the Michigan Gas Transmission Corporation as of June 30, 1941, exclusive of working capital, materials and supplies, cost of developing business, or going value.

The method used in arriving at the reproduction cost has been by the application of specific indexes of equipment, materials, labor and other installation costs to the

original costs as obtained from an analysis of the company's records.

Cost of reproduction new is taken as the amount in dollars necessary to be expended to reproduce the existing plant under the original conditions of weather, soil and grade, and predicated upon the same contingencies as were actually encountered during the construction of the property. Trending by means of index numbers involves no estimates of labor performance other than reflection of improvements in methods of construction; nor does it involve percentage allowances for warehousing, loss and breakage, supervision, use of tools and equipment, or contingencies. These items form an integral part of the original cost constituting the inventory of dollars which has been repriced by the application of indexes.

Land and Land Rights were furnished by the company and are included at original cost.

The original costs used for trending purposes were obtained by an analysis of company records, including property records, construction ledgers, vouchers, bills, contrac- [fol. 14387] tors' final estimates, payrolls, etc. The purpose of the analysis was to obtain costs in such form as to permit the application of indexes to individual items of property installed in the various years. Unit costs of pipe per ton, labor per hour or per foot of pipe, etc. were also investigated.

Basic data for the development of the indexes were obtained from manufacturers of equipment and machinery, from current price quotations as shown in trade publications, from catalogs and price lists, from government publications, and from contractors, and were checked wherever possible with actual costs incurred during the construction of the property.

Building material trends were established for basic commodities, such as cement, sand, stone, lumber, structural steel, etc., and were weighted in proper proportion for application to the original costs of concrete, carpentry, steel work, etc.

Equipment indexes for the main compressors and auxiliary engines were computed from the actual prices paid for such equipment by the company. The trends for other items of equipment were based upon information from manufacturers or from data in our files.

The indexes of labor for construction of the station buildings and for the installation of station equipment were developed largely from actual rates paid at the various periods of construction compared with those currently being paid for construction work now in progress. Much of the earlier construction was done with non-union labor, whereas today it probably would have to be done by union labor.

[fol. 14388] The indexes for steel pipe were developed from analysis of vouchers showing the prices actually paid by the company and from a consideration of all available information relating to the price at which pipe could be purchased as of June 30, 1941. It is my considered opinion that $65 per ton, based on Lorain freight, is the probable average price at which steel pipe of 16" diameter and larger could have been purchased as of June 30, 1941. For sizes below 16", the manufacturers' carload lists and discounts were used.

The indexes for the installation costs of mains and laterals were based upon the relation of actual costs of construction to recent construction costs and a consideration of current bids for comparable sizes of pipe in comparable territory.

On page 12 is shown a reconciliation of the original cost before reclassification with the original cost as reclassified. The analysis made for trending purposes excluded such items as transfers, adjustments, and minor additions and retirements. The effect of the reclassification and the extent of such property not analyzed are set forth on this sheet, both as they affect original and reproduction cost.

On page 11 is shown a summary by accounts setting forth the original cost and the reproduction cost new as finally determined after reclassification.

[fol. 14389] Michigan Gas Transmission Corporation

Reproduction Cost New As Of June 30, 1941

* Indicates red figure

(1) Includes $46,591 covering cost of dwellings, garages and outside lighting transferred from account 352.3 to account 352.1.

(2) Includes $1,934.46 of reclassifications developed as transferable to expense and other balance sheet accounts, which were not reclassified because no reaccounting items were considered in the original cost reclassification.

(3) Represents engineering fee of $139,424 charged by an affiliated construction company and interest during construction estimated at $2,200 responsive to said amount, the aggregate amount of which, or a substantial portion thereof, in the opinion of the company is properly includible in original cost. However, for the purpose of the present rate proceeding this amount is ignored in the determination of the value of "Gas Plant" for the reason stated in the preliminary report of the original cost of "Gas Plant", submitted in this case, as Exhibit ____.

Paul B. Coffman, resumed	10076	3676
P. McDonald Biddison, resumed	10399	3853
Leith V. Watkins, resumed	10452	3882
P. McDonald Biddison, resumed	10534	3919
J. D. Creveling, resumed	10559	3933
Samuel Joseph	10659	3976
Statement relating to Production from Hugoton Field	10679	3987
Letter, O. W. Morton to Federal Power Commission, April 9, 1942	10698	3989
Letter, O. W. Morton to Federal Power Commission, April 11, 1942	10699	3990
J. G. Shattuck	10701	3991
Exhibits:		
1, Statement of Operating Results of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company, 1938-1940	10775	4012
Operating Results	10775	4012
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1938	10777	4013
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1939	10778	4014
Cost, and Cost Less Reserves, of Plant and Operating Results as of December 31, 1940	10779	4015
Working Capital Estimate, December 31, 1938-39-40	10780	4016
Working Capital Estimate, Approximate Payroll Basis, December 31, 1940	10782	4017
2, Determination of possible Revenue Reduction of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company	10783	4018
3, Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, February 12, 1937, with respect to Gas Reserves	10785	4019

	Original	Print
4, Excerpt from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, November 13, 1940, with respect to Gas Reserves	10786	4021
5, Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission, November 13, 1940, with respect to Design, Construction and Maintenance of Property	10789	4025
6, Statement of Operating Expenses and Taxes at 100% Load Factor Operation	10791	4029
7, Statement as to necessary Price per M. C. F. at 100% Load Factor	10793	4030
8, Statement of estimated Effect of 100% Load Factor on earning Power of System	10795	4030
9, Statement of Factor affecting the Nature and Magnitude of reported Net Incomes	10796	4031
10, Statement showing Effect of Variation in accounting Practices on Reported Incomes of an Enterprise	10799	4034
11, Chart showing Relation of Yield of United States Treasury Bonds and Notes	10800	4035
12, Statement showing United States Treasury Bond Yields	10801	4037
13, Chart showing History of Yields of United States Bonds, 1920-1939	10806	4045
14, Average Yield of United States Treasury Bond	10807	4047
14-A, Securities & Exchange Commission Releases Nos. 2778 and 2834 — Findings and Opinion of the Commission in the Matters of Panhandle Eastern Pipe Line Company, et al	10808	4047

Index, Volume IX.

Order of Securities & Exchange Commission Denying Applications in Part and granting Applications in Part	10842	4087
Supplemental Order of Securities & Exchange Commission amending Findings and Opinion	10843	4089
17, Miscellaneous Data concerning Property and Operations of Panhandle Eastern Pipe Line Company	10848	4090
Schedule 1, Panhandle Eastern Pipe Line Company System Compressor Stations	10848	4090
Schedule 2, List of Communities receiving Service directly or indirectly from Panhandle Company including Population and Number of Customers as of June 30, 1941	10849	4091
Schedule 3, List of Industrial Customers receiving Service direct from Panhandle Company System, June 30, 1941	10853	4099
Schedule 11, Panhandle Eastern System Summary — Miles of Pipe by Sizes, June 30, 1941	10926	4101
30, Testimony of Rufus M. Smith	10958	4103
Schedule 2, Estimated Original Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10986	4125

	Original	Print
Schedule 3, Estimated Remaining Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10987	4125
Schedule 5, Comparison of Open Flow Potentials in Texas Panhandle Gas Field	10990	4129
Schedule 6, Gas Acreage owned and under Gas Purchase Contracts held by Panhandle Eastern Pipe Line Company as of June 30, 1941	10991	4131
Schedule 7, Hugoton Production to Argus Natural Gas Company, Inc. by Panhandle Eastern Pipe Line Company, et al	10992	4133
Schedule 8, Texas Production to Panhandle Eastern Pipe Line Company	10993	4135
Schedule 9, Hugoton Production to Panhandle Eastern Pipe Line Company	10997	4143
Schedule 10, Hugoton Production to Panhandle Eastern Pipe Line Company	11000	4149
Schedule 11, Analysis of Cumulative Production to Main Line to and including Fiscal Month of June 1941	11003	4155
Schedule 12, Comparative Statement of Production and Purchases from each District for the two Years ended June 22, 1940 and June 22, 1941	11004	4157
36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co.	11047	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12132	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs —west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Detail of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities, years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59, Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297
60, Statement showing Sales Agreements with other Gas Companies as at June 30, 1941	13230	4299
61, Study of Current and Future Trends in Commodity Prices and Wages, by David Friday	13238	4310
Graph showing Wholesale Prices from 1800 to 1940	13239	4311
Index Numbers of Wholesale Prices of Commodities by Groups	13241	4313
Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13286	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4347
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation		
Table of Contents	13321	4349
Statement of Experience and Qualifications of Paul B. Coffman	13322	4349
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13327	4354
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13348	4371
	13351	4373

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375
Statement B, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13353	4377
Statement B-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13354	4379
Statement C, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13355	4381
Statement C-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13356	4383
Statement D, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13357	4385
Statement D-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941 January-August, Both Inclusive	13358	4387
Statement E, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13359	4389
Statement E-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13360	4391
Statement F, General Information Covering each Company as to the Nature and Size of the Business and the Territory served	13361	4393
64, Statistics supporting Data, Exhibit 63, Appendixes A, B, and C	13379	4414
Appendix A, Complete List of Companies studied and Reasons for eliminating those not used to determine Investors' Appraisal of Risks of Capital	13380	4414
Appendix B, Securities of forty-three Natural Gas Companies considered Representative of the Industry, etc.	13387	4426

Index, Volume X.

Appendix C, Working Papers showing the Computation of Investors' Appraisal of the Risks of Capital	13398	4446
Water Companies	13399	4447
Electric Operating Utility Companies	13420	4461
Manufactured and Mixed Gas Companies	13465	4501
Natural Gas Companies	13495	4521
65, Study relative to Rate of Return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corporation	13533	4547
Table of Contents	13534	4547
Chart No. 1, Main Transmission System of Panhandle Eastern Pipe Line Co. and Subsidiary	13542	4559
Chart No. 2, Growth of Natural Gas Industry in United States of America from 1906 to 1940	13548	4567
Chart No. 3, Consumption of Natural Gas in United States of America from 1919 to 1940	13550	4571
Chart No. 4, Revenue from Natural Gas Consumed in United States of America from 1919 to 1940	13552	4573

	Original	Print
Chart No. 5, Average Revenue per M. C. F. from 1929 to 1940	13554	4575
Chart No. 6, Panhandle Sales by States, vs. Industry Consumption of Natural Gas from 1934 to 1940	13556	4577
Chart No. 7, Trends of Gross Revenue from 1934 to 1940, Panhandle vs. other Pipe Line Companies and Industry	13558	4579
Chart No. 8, Operating Ratio of Panhandle Compared with other Pipe Line Companies from 1934 to 1940	13560	4581
Chart No. 9, Trend of Revenue and Expenses of Panhandle Eastern Pipe Line Company from 1934 to 1940	13562	4583
Chart No. 10, Percent Earned on Invested Capital of Panhandle Based upon Capital Structure	13564	4585
Chart No. 11, Percent Earned on Invested Capital of Panhandle Based upon Net Property, Intangibles and Working Capital	13566	4587
Chart No. 12, Return to Common Stockholders of Panhandle Eastern Pipe Line Company from 1934 to 1940	13568	4589
Chart No. 13, New Tax Bill will reduce Income sharply Computations based on Operations — Twelve Months ended June 30, 1941	13570	4591
Chart No. 14, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13572	4593
Chart No. 15, Percent Earned on Invested Capital of Panhandle Eastern Pipe Line Company — as of June 30, 1941	13574	4595
Chart No. 16, Historical Costs of Debt Capital of Panhandle Eastern Pipe Line Company — from 1930 to 1941	13576	4599
Chart No. 17, Effect of 1941 Refinancing of Panhandle Eastern Pipe Line Company	13578	4603
Chart No. 18, Historical Costs of Preferred Stock Capital of Panhandle Eastern Pipe Line Company from 1937 to 1941	13580	4605
Chart No. 19, Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks from 1937 to 1940	13582	4607
Chart No. 20, Current Earnings — Price Ratios of Natural Gas Pipe Line Common Stocks	13584	4609
Chart No. 21, Cost of Financing Northern Natural Gas Company Common Stock — Offered to Public on September 10, 1941	13586	4613
Chart No. 22, Estimated Current Cost of Financing Common Stock of Panhandle Eastern Pipe Line Company	13588	4615
Chart No. 23, Continuing Growth of Panhandle System Indicates Future Needs for New Capital	13590	4617
Chart No. 24, Panhandle Eastern Pipe Line Company Invested Capital as of June 30, 1941	13592	4621
Chart No. 25, Preferred Stock Unusual in Natural Gas Pipe Line Companies	13594	4623
Chart No. 26, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13596	4625
Chart No. 27, Earnings Necessary to Maintain Credit Position of Panhandle Eastern Pipe Line Company	13598	4627
Chart No. 28, Overall Cost of Capital to Panhandle Eastern Based on Ideal Capital Structure	13600	4629

	Original	Print

XXX Fil.

The decree permits Columbia Oil, on application, to be exempted from the terms of the decree when Columbia Gas has divested itself of control of Panhandle Eastern by divesting itself of voting securities of Columbia Oil.

Pursuant to the decree Gano Dunn was appointed trustee to hold all securities of Panhandle Eastern with present or potential voting rights owned, or to be acquired by Columbia Oil. The decree defines the trustees' powers as follows:

1. He may vote the stock for the election of directors of Panhandle Eastern—one of which shall be himself.

2. The directors elected by the trustee are to be recommended by Columbia Oil, which may not, however, without approval of the court and the trustee recommend any of the defendants in the action or any of the officers, directors, employees or agents of Columbia Gas.

3. The trustee is permitted to remove and replace directors, if necessary for the purposes of the decree, subject to control of the court.

4. The trustee is to vote Panhandle Eastern's stock as directed by the beneficial owners "except when such directions are inconsistent with the purposes of this decree."[13]

The decree provides for termination of the trust upon the following conditions:

1. That Columbia Gas divest itself of control over Panhandle Eastern by divestiture of ownership of the voting securities of Columbia Oil, or

[fol. 10817] 2. That Columbia Oil divest itself of all of its stock in Panhandle Eastern, or

3. That the trust is no longer essential to carry out the terms of the decree.

[13] In addition the trustee is required to pay to Columbia Oil all dividends except stock dividends, which are subject to the terms of the decree; and he must exercise all rights to subscribe to any securities as Columbia Oil may direct. Specific power to approve any underwriting necessary to finance Panhandle Eastern's performance of its contract

C. Effect of the Decree on the Relationship Between Columbia Gas and Columbia Oil

We do not think that the changes required by the decree[14] has the effect of freeing Columbia Oil from the control or controlling influence of Columbia Gas within the meaning of Section 2(a)(8) of the Act. We do not mean to intimate any opinion as to whether the decree has or has not had the effect of enforcing compliance with the anti-trust laws; that question is not in issue before us. We need only determine the status of the applicants under Section 2(a)(8).

First, it is doubtful whether we could, in any case, hold that an applicant for a declaratory order under Section 2(a)(8) has satisfied its burden of demonstrating the absence of controlling influence by showing merely, that the owner of 10% or more of the outstanding voting securities has only a minority on its board. Secondly, we are not satisfied, on the basis of the record before us, that Columbia Gas representation on the Columbia Oil board has been limited to a minority.

By virtue of its ownership of Columbia Oil's preferred stock, Columbia Gas elects three out of a total of seven directors of Columbia Oil. The common stock elects the remaining four but, as will be seen, most of the directors elected by the common stock have been persons who at some time in the past, were closely identified with Columbia Gas.

Pursuant to the undertaking contained in the stipulation described above, the by-laws of Columbia Oil were amended to include the following provisions:

[14] Partial liquidation of Columbia Oil's debt to Columbia Gas;

2. Conversion of remainder to long term obligations;

3. Conversion of Columbia Oil classes of preferred into a single class to be held by Columbia Oil having the right to elect the largest minority of directors;

4. Assurance that the majority of the Columbia Oil board and all of its officers are not to be contemporaneously connected with Columbia Gas; and

5. Dissolution of the voting trust for Columbia Oil common stock

[fol. 18818] "Except for the Directors (constituting a minority of the whole Board) elected by the holders of the Preferred Stock, no person shall be elected a Director of the Corporation who is a director, officer or employee of Columbia Gas & Electric Corporation or any of its subsidiaries;

"No person shall be elected or appointed an officer of the corporation who is a director, officer or employee of Columbia Gas & Electric Corporation or any of its subsidiaries." (Emphasis supplied)

The use of the present tense in these provisions was apparently advised, as a resume of the management of Columbia Oil will reveal. The Columbia Oil board consists at the present time of seven directors: W. C. Beckjord, J. A. Bruce, R. H. Delafield, W. M. Falion, W. P. Philips, H. A. Wallace and Don M. Wilson.

Beckjord is Chairman of the Executive Committee, a Director and Vice-President of Columbia Gas.

Delafield is a Director and Vice-President of Columbia Gas.

Wallace is a Director and Vice-President of Columbia Gas.

Philips was, between 1926 and 1930, a Director of Columbia Gas. In 1934 he was chosen to succeed T. B. Gregory, a defendant in the anti-trust suit, and a Director and Vice-President of Columbia Gas, as a voting trustee for the common stock of Columbia Oil. Philips served as such until the termination of the trust in 1936.

Wilson, who joined the Columbia Oil board in 1937, had, but eleven days prior to that time, resigned as Director and President of the Atlantic Seaboard Corporation, a subsidiary of Columbia Gas. He had held that position since 1933.

There is no evidence that Messrs. Bruce or Falion (who were elected in 1938 and 1939 respectively) had any connection with Columbia Gas.

From the date of its organization to the present twenty different persons have served as directors of Columbia Oil.

All but three of these persons have at some time been either officers or directors of Columbia Gas. There have been twenty-five officers of Columbia Oil (including the voting trustees). Of these all but four have had some official connection with Columbia Gas. And two of the allegedly independent officers (W. A. Blind and C. H. Lavin) were personal employees of Munroe, who was a Director of Columbia Gas between 1929 and 1934, and a Director and President of Columbia Oil between 1931 and 1939.

We do not think, upon these facts, that it has been demonstrated that Columbia Gas and Columbia Oil have ever severed the avenue of influence by representation in management. Indeed, were we required to find affirmatively that Columbia Gas has been sedulous to insure continuous rep-[fol. 10819] resentation on the board of Columbia Oil, it would be difficult, on the basis of this evidence, not to make such a finding. The affiliations of three of the seven directors afford an admitted tie with Columbia Gas and this in itself is probably sufficient to negative applicants' case; in addition, with respect to two of the other directors, there is, at the very least, a strong link of historical relationship.

We cannot be asked to shut our eyes to "actualities in . . . intercorporate relationships" in determining the existence of control or controlling influence; Rochester Telephone Corp. vs. United States, et al., 307 U. S. 125 (1939); nor can we be expected to ignore the fact that "historical ties and associations often serve as a substitute for, or a potent auxiliary of, the more obvious modes of control." American Gas and Electric Company, 9 S. E. C. . . . . (1941), Holding Company Act Release 2749. We must conclude that the affiliations of the Columbia Oil board membership, from the date of its creation, indicate that its management and policies have always been subject to the controlling influence of Columbia Gas.

Columbia Gas and Columbia Oil, from the date of formation of Columbia Oil have had their offices at the same address.[15] And the affiliation between the two companies

[15] Up to 1932 Panhandle Eastern held its board meetings in the Columbia Gas board room at this address—61 Broadway. After that time its meetings were held in the board room of the Columbia Engineering

has, even since the date of the decree, been demonstrated by even more than the relationships through security holdings, directors and officers, and offices at the same address. In this connection, it becomes relevant to examine (1) a series of negotiations between Columbia Oil, Columbia Gas and the Mokan receivers for settlement of the Mokan claim for treble damages, and (2) certain transactions relating to the financing and construction of the so-called Detroit Extension for Panhandle Eastern.

(1) Negotiations Between Columbia Gas and Mokan Receivers

On January 31, 1936, Columbia Oil and Columbia Gas submitted an offer of settlement of the claims of the Mokan receivers. Its terms involved a recapitalization of Panhandle Eastern, a reallocation of the Panhandle Eastern securities as between Columbia Oil and Mokan, and an undertaking by Columbia Gas to finance the extension of Panhandle Eastern's lines to enable Panhandle Eastern to fulfill its contract with the Detroit City Gas Company.[16] The offer contemplated the issue by Panhandle Eastern of convertible preferred stock which would be taken by Columbia Oil,[17] the issuance of common stock, one-half of which [fol. 10820] would go to Mokan, and one-half to the Columbia interests; and the issuance of additional subscription rights to 160,000 shares of common stock, half of which would be taken by the Columbia interests and the remainder by Mokan, under an agreement by Mokan to distribute the warrants to its stockholders and to permit the Columbia interests to subscribe to any common stock not taken under the warrants distributed to Mokan stockholders.[18]

---

[16] This contract is discussed below.

[17] The agreement refers to $11,000,000 par value of preferred stock which "we are to receive . . .". The "we" refers to Columbia Oil and Columbia Gas.

[18] It is apparent that the offer intended no relinquishment of the Columbia control of Panhandle Eastern. The provision for convertible preferred stock—all of which was to go to Columbia Oil, and the requirement of distribution to Mokan stockholders of additional common stock would have had the clear effect of making any original equal division of common stock highly temporary.

The proposal served the purpose of placing Columbia Gas and Columbia Oil in the position of having made an offer—a token satisfaction of

The Mokan receivers refused to accept this offer. Negotiations, however, proceeded in an attempt to reach adjustment. Much correspondence and at least ten conferences were had in the course of arriving at a final settlement. In none of these conferences was Panhandle Eastern or Columbia Oil independently represented. Reynolds, who had been since 1934 a Director of Columbia Gas, who became its President during the course of the negotiations and who was not during their pendency connected with Columbia Oil in any official capacity, was the exclusive representative of Columbia Gas, Columbia Oil and Panhandle Eastern.

The fact that in significant negotiations vitally affecting the interests of Columbia Oil and involving extremely important changes in the capital structure of Panhandle Eastern, no independent representation was had for Columbia Oil or Panhandle Eastern is, we believe, highly indicative of the relationship between Columbia Gas and Columbia Oil and between Columbia Gas and Panhandle Eastern.

The inference is strengthened by the result of the negotiations: the present capital structure of Panhandle Eastern. At present Columbia Oil is the beneficial holder of all of Panhandle Eastern's preferred stock, and over half of its common. The rights for which Columbia Gas negotiated in the settlement with the Mokan receivers have been substantially preserved. The Mokan receivers agreed to distribution of the block of rights to 80,000 shares of Panhandle Eastern—which eventually reduced Mokan's common stock participation to 42%. In the exchange for the convertible preferred stock Columbia Gas procured for Columbia Oil all of the Class B unredeemable preferred stock giving it the right to select two out of Panhandle Eastern's nine directors. By virtue of Columbia Oil's holdings in the common stock, it selects an additional four directors; and although one of these must be the trustee, the remainder chosen constitute the majority of Panhandle Eastern's board. Columbia Gas bargained for a preferred stock redeemable after 1936 at 110%, and it was successful in procuring for Columbia Oil Panhandle Eastern's Class A pre- [fol. 10821] ferred, which is redeemable after July 1, 1941, at a $10 premium. The original bargain for full voting rights for Panhandle Eastern preferred stock has been

modified, but without prejudice, for Columbia Oil has retained the right to select a majority of the Panhandle Eastern board. A "certain flow of earnings" and "future voting rights" were assured.

These negotiations indicate that when the stakes were high Columbia Gas did not resort to the intermediacy of Columbia Oil in its relations with Panhandle Eastern. Another instance of this direct relationship is found in the transaction relating to the so-called Detroit Extension.

(2) The Detroit Extension

On August 31, 1935, Panhandle Eastern entered into a contract with the Detroit City Gas Company[19] to supply gas to that company for resale in the Detroit area.[20] At that time, as now, Panhandle Eastern's own pipe line extended to the Indiana-Illinois border, whence its lines met the lines of Indiana Gas Transmission Corporation, a subsidiary of Columbia Oil. To fulfill the contract, Panhandle Eastern was required, by its terms, to satisfy the Detroit City Gas Company by February 1, 1936—six months after the contract date—that it had arranged for the financing of an extension of its lines in order to connect with the Detroit Company, and that it had made satisfactory arrangements for financing additional construction on its own lines.

There appears never to have been any question in the minds of the Columbia group but that Columbia Oil or Columbia Gas would build and own the extension necessary to meet the Detroit requirements. Yet it was necessary, pursuant to agreements with the Department of Justice made prior to the entry into the stipulation and consent decree in the anti-trust suit, that Panhandle Eastern be given an opportunity to secure outside financing for the building of the Detroit extension. Accordingly, in an agreement dated January 31, 1936, Panhandle Eastern was

[19] This company is now known as Michigan Consolidated Gas Company.

[20] W. C. Beckjord was instrumental in negotiating this contract. Beckjord has been a Director of Columbia Gas from 1934 until the present time. From 1936 until the present, he has also been a Director of Columbia Oil, chosen by the preferred stock held by Columbia Gas.

given a twenty-day option to accept or reject an offer made by Columbia Gas to build the Detroit extension.[21]

[fol. 10822] The option like other transactions we have discussed appears to have been merely a token. Panhandle Eastern undertook no negotiations to secure outside financing.[22]

Columbia Gas promptly undertook to inform Detroit City Gas Company that it had offered the necessary financing to satisfy the requirements of the contract of August 31, 1935. The Detroit Company thereupon bound itself under the contract.

Columbia Oil, unless it could procure financial aid, was unable to finance the Detroit extension. The result was patent. On November 4, 1935, Columbia Gas formed the Michigan Gas Transmission Corporation with Beckjord as President for the purpose of building the Detroit extension.

The machinery for complete ownership by Columbia Gas of the lines meeting Panhandle Eastern's lines and extending into Detroit, was effected in the space of four days by the acquisition by Columbia Gas from Columbia Oil of all of the securities of Indiana Gas Transmission Corporation.[23] These transactions took from February 28 to March

[21]Under this contract, which was dated two days after the consent decree, Columbia Oil undertook to purchase one-half of an additional issue of common stock of Panhandle Eastern to provide it with necessary funds for additions to its lines to enable adequate service under the Detroit contract. This is the block previously referred to in connection with the Mokan settlement, which increased Columbia Oil's common stock participation in Panhandle Eastern to 50.1% as against Mokan's 42%.

[22]It probably could not have done so successfully. It had outstanding, at that time, bonds and notes. Although the interest requirements of its bonds had been met, Columbia Oil was in a position to put Panhandle Eastern into bankruptcy by reason of its ownership of these bonds. They were in default because of a provision in the indenture which made a default in the notes an act of default with respect to the bonds, and the notes were in default. The provision referred to was the result of an amendment to the indenture authorized by the Panhandle Eastern board at a meeting held on March 26, 1931. Present at that meeting were Messrs. Crawford, Gossler, Gregory, Munroe and Howard, each one of whom was a Director of Columbia Gas.

It is noteworthy that at the time that Columbia Oil and Columbia Gas were negotiating the offer of financing, Columbia Oil and Panhandle Eastern were represented by the same attorneys.

[23]Columbia Gas had merely to forgive Columbia Oil its indebtedness upon extensions made to it to acquire Indiana Gas in order to get Columbia Oil to surrender the securities of Indiana Gas.

3, 1936.[24] Thus, Columbia Gas, through its completely controlled subsidiaries, Michigan Gas and Indiana Gas Transmission Corporation, controls the eastern outlet of the Panhandle Eastern lines. Michigan Gas' pipe lines are the medium for the sale of at least 65% of the gas sold by Panhandle Eastern.

[fol. 10823] On March 17, 1936, Panhandle Eastern contracted to supply gas to Michigan Gas to satisfy the requirements of the Detroit City Gas Company. Payments for gas supplied on contracts negotiated by Panhandle Eastern in the territory were to be impressed with a charge in favor of Michigan Gas which would put it in the same position as though Michigan Gas had sold the gas to its own customer—the Detroit Company. Although Michigan Gas bound itself to assign to Panhandle Eastern contracts in this territory which Michigan negotiated, the same charge was to be exacted.[25] The terms of sale of gas to "Special Industrial Customers" were to be negotiated through individual contracts between Michigan Gas and Panhandle Eastern.

The contract envisaged a continuous inter-company relationship of vital importance to the well-being of Panhandle Eastern. Thus the ownership of the Detroit extension becomes still a further link in the chain between the applicants.[26] There exist no external guarantees which would warrant a holding that economic control as vital as

[24]Indiana Gas Transmission Corporation owned lines which touched Panhandle Eastern's lines at the western Illinois border and extended to the Illinois-Indiana border.

[25]The contract provided that if Panhandle should refuse to accept such an assignment, Michigan Gas might call upon it to supply sufficient gas to satisfy the contract, so as to yield the stated benefit to Michigan Gas. Although, conversely, Michigan undertook to accept Panhandle Eastern's additional gas, it conditioned the contract so that it was not liable to accept beyond that point at which its capacity to supply its own commitments would be prejudiced. Significantly, Michigan Gas held itself free to accept as much as 500,000,000 cubic feet of gas per annum from sources other than Panhandle Eastern.

[26]In the case of Hartford Gas Company, 8 S. E. C. ..... (1941), Holding Company Act Release No. 2618, we treated as material to a denial of an application under Section 2 (a) (8) the fact that the applicant was dependent for the bulk of its gas requirements upon a subsidiary of the applicant's holding company. We there distinguished the Lehigh Power Securities Corporation case, 5 S. E. C. 143 (1939) on the ground that no guarantees of misuse of such an avenue of control ex-

[fol. 10824] that held by Columbia Gas cannot be used as a lever for other forms of domination.[37]

In a recent opinion affirming an order of this Commission denying an application under Section 2 (a) (8), the Circuit Court of Appeals for the Sixth Circuit expressly recognized the importance in such cases of factors indicating continuity of relationships between holding companies and subsidiaries. The Court, speaking through Judge Hamilton, said:

"The Statute contemplates action prospectively. It is a preventive measure intended to regulate action before the interests of those concerned are adversely affected. The prime factors in determining statutory exemption are the size and extent of the company involved, the inter-company relationship, the distribution of its securities and the opportunity presented because of the relationship between the parent and subsidiary for excessive charges for services, construction work, equipment and materials and the transactions entered into in which evil may result, because of the absence of arms-length bargaining or restraint of free and independent competition." Detroit Edison Company vs. Securities and Exchange Commission, decided May 12, 1941.

The Strategic Position of Columbia Oil's Preferred Stock

Columbia Oil's preferred stock is not only entitled to elect the largest minority of directors and to have equal

---

isted there. In the Lehigh case we noted, of a relationship of dependency for requirements that

"such relationship might, unless mitigated by other circumstances, be used to exercise some control or at least a controlling influence over applicant."

The fact that this case involves access to markets rather than dependency for requirements is not itself a ground for distinction. Both forms of control may involve the power of economic strangulation.

[37] "The pendency of the consent decree is, itself, of little significance as a guarantee against use of the Detroit extension for control purposes. As will be shown, the Federal Court which issued the decree has interpreted it as operating only in the realm of restraint of trade. There exists no machinery for continuous policing of the affairs of these companies and the judicial settlement of any disputes that may arise concerning the effect of the decree on their relationship will, in all probability, be effected against the background of this limitation. The Department of Justice itself in a supplemental complaint in the anti-trust suit has alleged that by reason of its control over the extension "Columbia Gas increased its control over Panhandle Eastern."

voting rights with the common on all other matters, but it has certain important veto powers in the affairs of Columbia Oil. By reason of its ownership of that stock Columbia Gas may prevent (inter alia) the creation or issuance [fol. 10825] of any shares of stock, other than common, or any merger, consolidation, sale, lease or other transfer of all or the greater part of the assets of Columbia Oil.

Taken together with other factors the existence of this power—although occasion for its use may not have arisen in the past—is significant in indicating the existence of a controlling influence. Columbia Oil, in its annual report for 1940 has scheduled its assets at $62,435,561.46. Its investment in Panhandle Eastern is carried at $23,278,509.99. Its assets other than investment in Panhandle Eastern are carried at $34,788,196.04. On the basis of these figures the value of the Panhandle Eastern investment is less than half of the total assets. However, in an opinion attached to Columbia Oil's 1940 report to its stockholders, Price, Waterhouse & Company stated that experts had valued the properties other than Panhandle Eastern at between $12,000,000 and $20,000,000, the latter figure being fixed by a director of Columbia Oil in hearings before the Federal District Court. Should these figures be taken as approximately representative, the Panhandle Eastern investment is more than half of Columbia Oil's total assets. Columbia Oil could not in this event sell the Panhandle Eastern investment without Columbia Gas' consent, in view of the provision already mentioned regarding the sale of the greater part of Columbia Oil's assets.

When other factors indicate the absence of control or controlling influence within the meaning of Section 2 (a) (7) or 2 (a) (8), it may be that the possession of veto power over corporate changes is not exclusively determinative. See Allied Chemical & Dye Corporation, 5 S. E. C. 151 (1939). This does not mean, however, that we can ignore the cumulative effect of such a veto power when other factors of control exist, as they do in this case.

Upon the basis of the foregoing, we hold that applicants have not demonstrated that Columbia Oil is not subject to the control or controlling influence of Columbia Gas. Cf. Detroit Edison Company vs. Securities and Exchange Com-

mission, (C. C. A. 6th, decided May 12, 1941), Rochester Telephone Corporation vs. United States, 307 U. S. 125 (1939); American Gas and Electric Company, 9 S. E. C. ..... (1941); Holding Company Act Release No. 2749; H. M. Byllesby & Company, 6 S. E. C. 639 (1940); The Hartford Gas Company, 8 S. E. C. ..... (1941), Holding Company Act Release No. 2613. Indeed, we think that the record affirmatively shows the existence of such control and controlling influence.

Relationship between Columbia Oil and Panhandle Eastern[27]

Whatever the relationship between Columbia Oil and Panhandle Eastern may have been prior to January 29, 1936, both companies claim that date—the day of entry of [fol. 10826] the consent decree in the government anti-trust suit—as of primary significance in their history. On that day, it is claimed, the interposition of Gano Dunn as trustee under the decree to hold all of the voting securities of Panhandle Eastern owned by Columbia Oil insulated Panhandle Eastern from Columbia Oil control. We do not believe that this, in fact, occurred and it may well be doubted that the decree attempted to provide for it—at least with respect to the question as it is presented under Section 2 (a) (8) of the Act.

It will be recalled that although the decree directed Gano Dunn to take possession of Columbia Oil's holdings of Panhandle Eastern's stock, Gano Dunn was nevertheless subjected by the terms of the decree to the exercise of Columbia Oil's will in the voting of these securities in extremely important respects. By reason of Columbia Oil's ownership of Panhandle Eastern's securities it is able to elect six out of nine directors. The trustee votes for these directors, and one of them must be himself. Columbia Oil cannot recommend any of the defendants in the anti-trust action or any person "who after January 1, 1931, has been or hereafter becomes an officer, director,

[27] Many of the facts and transactions already discussed have a material bearing on the relationship between Columbia Oil and Panhandle Eastern and have also been considered by us from that point of view.

agent or employee of Columbia Gas."[29] Except for this limitation, however, the consent decree gives Columbia Oil complete freedom to recommend a panel to Gano Dunn from which he must select the majority of the Panhandle Eastern board.

In all other respects Gano Dunn must vote the stock of Panhandle Eastern as Columbia Oil directs "except when such directions are inconsistent with the purposes of this decree." Mr. Dunn has expressly stated that he has never declined to follow any instruction given him by Columbia Oil respecting the voting of the stock.

In the proceedings before the trial examiner repeated colloquies took place with respect to the proper interpretation of the decree. It was contended by the applicants that the decree had as its purpose the complete quarantine of Panhandle Eastern from Columbia Gas. It was contended on behalf of the Public Utilities Division that the decree was addressed solely toward assuring that the control of Panhandle Eastern shall not be used for the purpose of restraint of trade.

The decree itself is open to construction on this point. Among its recitals appear the following:

". . . and it further appearing from said stipulation that the petitioner and the defendants have agreed that provision against domination for control, direct or indirect, in the affairs of Panhandle Eastern Pipe Line Company by the defendant Columbia Gas and Electric Corporation and the maintenance of said Panhandle Eastern Pipe Company in a position of free and independent action in the production, transmission, sale and distribution of natural gas in competition with others constitutes the proper basis for the entry of this decree;"

[fol. 10827] Although the decree purports to enjoin the defendants from "interfering in any manner with the free and independent action of said Panhandle Eastern in the production, transportation, sale or delivery of natural gas to any person, corporation, community or section of the United States" it also purports to enjoin defendants

[29] Such persons may, however, be recommended with the approval of the court and the trustee.

"from exercising, or attempting, individually or collectively, directly or indirectly, to exercise any domination or control over Panhandle Eastern : . ." and "from participating in any way directly or indirectly, or from exercising any control, direction, supervision, or influence, in the management and control of Panhandle Eastern;"

We do not believe it necessary to construe the decree. The evidence is more than sufficient to satisfy us that in respect of at least the selection of the management of Panhandle Eastern, and the supervision of its financing, the trustee has abided by the terms of the decree, as he has understood it, and has considered himself bound by the wishes of Columbia Oil.[30] We cannot and do not desire to explore the question of whether the history of the applicants in these proceedings since the date of the decree indicates any violation of its terms. We have, on the basis of the record before us, concluded that the decree has not operated to negate the existence of control or a controlling influence within the meaning of Section 2(a) (8) of the Public Utility Holding Company Act, and our findings are limited exclusively to the issues arising under that Section.[31]

[fol. 10828] The Consent Decree And The Origin of Panhandle Eastern's Capital Structure

The history and the results of the negotiations between the Columbia companies and the Mokan receivers in settle-

[30] Mr. Dunn stated, in the hearing before the trial examiner that he could veto instructions of Columbia Oil only when he thought that fulfilling them would result in restraint of trade.

[31] In a decision refusing to take Federal jurisdiction over a suit brought by Mokan to compel Columbia Oil to permit the refinancing of Panhandle Eastern's Class A preferred stock (which will be commented on herein) Judge Kirkpatrick, of the Delaware District Court held that an action in the State Court for this purpose did not constitute an attack upon Federal jurisdiction. It was his view that the decree was not intended as a means of supervision of the relationship between the Columbia companies but that:

"The decree was, by its express terms and by all the implications arising from its background, primarily designed to prevent Columbia Oil and its affiliates from dominating and controlling Panhandle Eastern in such a manner as to eliminate competition between it and other companies and so monopolize interstate commerce in natural gas in certain sections of the country." (Missouri-Kansas Pipe Line vs. Columbia Oil & Gasoline Corp. et al., Civil Action No. 172, District Court of Delaware, 1941).

ment of the receivers' claims for treble damages indicate the lack of merit in the claim that the decree insulated control between the Columbia companies and Panhandle Eastern.

At the commencement of negotiations on January 31, 1936, Columbia Oil owned 50% of Panhandle Eastern's common stock, all of its outstanding bonds in the amount of $18,200,000 and 50% of its promissory notes in the amount of $4,945,500. 50% of Panhandle Eastern's common stock and 50% of its promissory notes were held by Panhandle Corporation. As has been noted, the stipulation entered into, in connection with the consent decree, on January 29, 1936, required Columbia Gas to make an offer of settlement of the Mokan receivers' claim. Accordingly, on January 31, 1936, the Columbia companies made an offer which contained (inter-alia) proposals to recapitalize Panhandle Eastern by having its 6% promissory notes converted into 6% convertible preferred stock[32] and by having Panhandle Eastern issue warrants for an additional 160,000 shares of common stock. It was proposed, in the original offer of settlement, that Columbia Oil receive rights to 80,000 shares, and that a distribution of the remaining rights would be made to Mokan stockholders.

On the same day, before there was any indication that the offer would be accepted—and in fact with every probability that it would be rejected (as it was in fact, because of the proposal to give Columbia Oil a convertible preferred stock enabling it to increase its participation in Panhandle Eastern's common stock), Panhandle Eastern's Certificate of Incorporation was amended to provide for the issue of convertible preferred stock and to authorize an increase in its common stock. On March 24, 1936, Panhandle Eastern authorized the offering of rights to the common stock, and on April 1, 1936, Columbia Oil exercised its option and acquired an additional 80,000 shares of Panhandle Eastern common stock.

---

[32] The ability to make such an offer was unquestioned. Although Columbia Oil held, directly, 50% of the notes, it had, on June 19, 1935 entered into agreements to purchase 75% of the stock of Panhandle Corporation, and it received that stock, in fact, on February 6, 1936, before the complete negotiation of settlement. On the same day, it acquired all of the outstanding indebtedness of Panhandle Corporation.

In April of 1936 the Columbia companies and the Mokan receivers agreed upon a settlement. This settlement formed the basis for the present structure of Panhandle Eastern. Columbia Oil acquired all of the preferred stock. Although the bargain for a convertible issue of preferred was given up, Columbia Oil retained indefinite- [fol. 10829] ly the right to elect two directors by reason of its ownership of the Class B preferred which is not subject to redemption, and by virtue of its ownership of the common stock it may select another four—one of whom must be the trustee. The Columbia companies were eventually successful in scattering Mokan's block of 80,000 shares of common stock by requiring distribution of this stock to Mokan's shareholders. This has resulted in a 50.1% ownership of common stock by Columbia Oil as against a 42% ownership by Mokan. At a special meeting of stockholders of Panhandle Eastern, Gano Dunn voted in favor of amending the Certificate of Incorporation to effectuate the terms of the settlement.

Panhandle Eastern was supine during this critical period. On appropriate occasions it undertook the formal acts which it was called upon to perform in order to effectuate the will of the Columbia companies. Unrepresented in the negotiations, it did as it was bidden. The interposition of a trustee for its voting stock had no effect on the result, for the trustee construed the decree not to permit him to interfere with the settlement.

The Effect of The Interposition of The Trustee on The Management of Panhandle Eastern

The stock of Panhandle Eastern held by the trustee is entitled to elect the majority of its board, and since this stock consists of all the preferred and 50.1% of the common stock its voting power on other corporate matters (amounting to 56.1%) is decisive. The cumulative voting of the common stock gives Mokan (a 42% common stockholder) the right to select three of a board of nine members.[33]

[33] The relations between the Mokan and Columbia directors of Panhandle Eastern are, to say the least, acrimonious. Repeatedly during the period from the consent decree to the present the Mokan directors have attempted to induce Panhandle Eastern to offer active resistance to Columbia domination. On one occasion an unsuccessful attempt was

[fol. 10830] The dominant position of Columbia Oil in Panhandle Eastern, in spite of the interposition of the trustee, has been illustrated in at least two critical instances which merit particular consideration. The first concerns a transaction whereby Columbia Oil assured itself a veto power over future bond financing of Panhandle Eastern as long as it controlled a majority of stock entitled to vote for directors; the second relates to the blocking of the refinancing of Panhandle Eastern's Class A preferred Stock.

(1) The Stockholders Consent Clause:

On October 4, 1940, the directors of Panhandle Eastern authorized its officers to report on a plan for the refunding of an issue of Panhandle Eastern's outstanding bonds.[34] A report was made after conference with Kuhn, Loeb & Co. which proposed, among other things, an open-end indenture. That proposal was made in direct contemplation of future financing for the purchase, if opportunity presented, of the securities of Michigan Gas.[35] Kuhn, Loeb & Co. were suggested as the refunding underwriter.[36] The plan proposed by the officers was accepted by the board.

On November 15, 1940, the President of Panhandle Eastern reported to the board that between meetings of the

made to challenge votes at a stockholders' meeting cast by the trustee and to take over control of the meeting. On another occasion Mokan charged continuation of "illegal control" of Panhandle Eastern, and demanded unsuccessfully that Panhandle Eastern institute various suits for damages for violation of the anti-trust laws and contempt of the consent decree. The position of Mokan in the proceedings before us has been adversary to that of the Columbia companies. Two of the present directors of Panhandle Eastern elected by Mokan holdings have filed on their own behalf a request that we disapprove of the application of Panhandle Eastern not only on the ground of Columbia control, but on the further ground that the application was filed in bad faith.

[34]This was an issue of $22,500,000 of 4% first mortgage bonds.

[35]Such a purchase would result in Panhandle Eastern's ownership of pipe lines from its southern fields directly to ultimate purchasers in the Detroit region.

[36]At a meeting of the Panhandle Eastern board on November 8, 1940, the Mokan directors suggested invitation of bids from other houses and acceptance of the lowest bid. Mr. Dunn, and the directors elected by the Columbia Oil stock defeated the resolution.

Board, a change had been made in the indenture which was to underlie the refunding bonds. It would contain a provision which conditioned any further financing under the indenture upon the approval of the majority stockholder—Columbia Oil.[37]

Columbia Oil had interdicted approval of the indenture unless this clause were inserted. Some protest was made by Panhandle Eastern to Columbia Oil that the restriction was an "unusual" one, but to no avail. The trustee [fol. 10831] was instructed to vote in favor of the consent clause, and he informed the Panhandle Eastern board that the terms of the consent decree required him to obey these instructions.[38]

With one exception, the Columbia Oil directors, including the trustee, voted in favor of the amendment. J. A. Bowers was the exception. A short time after the meeting J. A. Bowers resigned. The amendment was approved by the Panhandle Eastern board, and at the following stockholders' meeting the trustee voted the stock he held in its favor.[39]

The clause is of vital significance. At a later point we will discuss a so-called "Plan of Divestiture" whereby the Columbia companies propose to effectuate the elimination of chain holdings. Under this plan Columbia Oil will retain its holdings in Panhandle Eastern. It proposes, however, to secure the resignation of every member of its board in favor of persons not objectionable to the Depart-

[37]The amendment provided that if at any time 50% or more of the outstanding shares of all classes entitled to vote for the election of directors shall be held of record by one person, partnership or corporation, the registrant shall not execute any such additional bonds (except bonds issued upon the basis of cash deposited with the corporate trustee) without the formal approval, either in writing or at a meeting of the stockholders of the registrant called for the purpose of considering such approval.

[38]At this meeting of the board (November 15, 1940) the Mokan directors of Panhandle Eastern introduced a resolution—which was tabled against their vote—to the effect that the application of Panhandle Eastern then pending in this proceeding be withdrawn. The grounds of the resolution were that the forcing of the amendment indicated the existence of control and that, therefore, the application was not in good faith.

[39]Counsel for Columbia Oil justified the clause on the ground that without it "they (Panhandle Eastern) could mortgage our property without our consent."

ment of Justice. The members will be its representatives on the Panhandle Eastern Board. By securing the consent clause Columbia Oil was attempting to bind the freedom of Panhandle Eastern—so that no plan of divestiture affecting the external relationship of Columbia Oil with Panhandle Eastern could disturb Columbia Oil's grip on the security of its investment.[40]

Columbia Oil's success in procuring the insertion of the consent clause is illustrative of the degree to which the majority of the directors of Panhandle Eastern regarded themselves as bound by the will of Columbia Oil. The Certificate of Incorporation of Panhandle Eastern, as amended to May 1, 1938, contains the following provision:

"No vote, consent or assent of stockholders of the corporation shall be required to authorize the issuance of bonds, notes or other obligations of any maturity, secured or unsecured, or to authorize a mortgage upon or pledge of all or any part of the assets of the corporation including good will, corporate franchises, and after acquired property, but the issue of such obligations and the creation of such mortgage or pledge may be authorized by the Board of Directors upon such terms and conditions as they may at any time or from time to time determine."

[fol. 10832] There is no evidence that this clause was amended or deleted at the time the preparation of the indenture was being undertaken. If the terms of this provision were determinative of the relative powers of the directors and stockholders of Panhandle Eastern with respect to the bonding of its property, the subjection of Panhandle Eastern's directors to the will of Columbia Oil cannot be said to have derived solely from Columbia Oil's stock position. It must be inferred either that the directors were ill advised as to their own powers or that they regarded themselves as obliged to follow the directions of Columbia Oil whether or not Columbia Oil had the power to require compliance with its wishes.

We have no concern in this proceeding with the legitimacy of the consent clause, or the business wisdom behind it. It is important for our purpose because it indicates the

[40]This was substantially the explanation offered by the trustee.

ease with which Columbia Oil has been able to direct the management and policies of Panhandle Eastern in accordance with its own wishes.[41]

It has been urged upon us that the Department of Justice "had no objection" to inclusion of the stockholders' consent clause. But even the express approval of the Department would be of no relevancy to the issue here. As we have already stated, we are not concerned with the construction of the consent decree. The only question we have to decide is whether the evidence before us demonstrates a lack of control or controlling influence as those terms are used in Section 2(a) (8) of the Holding Company Act.

(2) Refinancing of the Preferred Class A

The $10,000,000 of Panhandle Eastern's Class A preferred stock was one of the successful features of the bargain driven by Columbia Gas in its settlement with the Mokan receivers. This preferred stock is entitled to preferential dividends of $6 per share, and is cumulative to the extent of net earnings available for preferential dividends (not exceeding $6). In addition, after certain reserve [fol. 10833] requirements have been met, and dividends on the common stock to the extent of $1.50 per share have been declared or paid, the Class A stock participates in any additional dividends to the extent of 25%. Columbia Oil has received dividends on this stock as high as 10%.

The Panhandle Eastern Certificate of Incorporation contains the following provision:

---

[41] The testimony regarding the consent clause brought to light the weakness of Mokan's position in Panhandle Eastern. On Oct. 15, 1940, Wilson, Vice President of Columbia Oil had occasion to suggest to the trustee that he observe discretion with regard to disclosing too many of the details of Panhandle Eastern's negotiations with Kuhn, Loeb & Co. Wilson wrote to the trustee: "Sperry (treasurer of Panhandle Eastern) is very anxious that it not be known that they have the figures at the present time, his reason being that Mr. Maguire (one of the Mokan representatives on the Panhandle Eastern board) would in all likelihood take them to Glore Forgan and complicate the set-up." It will be recalled in this connection that Mokan was attempting to secure competitive bidding for the issue.

Sperry admitted that no more than a skeleton proposal was submitted to the Panhandle Eastern board—and that they were not presented with detailed figures until the figures had been submitted to the Columbia Oil management.

"The Class A Preferred Stock at any time outstanding may be redeemed at any time by the corporation, at its election expressed by resolution of the Board of Directors, in whole or in part from time to time, upon not less than thirty nor more than sixty days' notice to the holders of record of the Class A Preferred Stock to be redeemed, . . . by the payment in cash for each share of the said stock so to be redeemed of One Hundred Dollars ($100) if redeemed on or before July 1, 1941, or One Hundred and Ten Dollars ($110) per share if redeemed thereafter, and in each case in addition thereto an amount which together with the aggregate of the preferential dividends paid upon such shares during the period from January 1, 1936, will be equal to their full cumulative preferential dividends for the calendar year 1936 plus six dollars ($6.00) per share per annum from January 1, 1937 to the date of redemption."

Since April of 1937 various proposals have been made to refinance this Class A stock, all of which is held by Columbia Oil. These proposals and attempts to put through such a refinancing have failed—and the history of that failure is a significant indication of Columbia Oil's control over Panhandle Eastern.

Proposals to refinance the preferred stock made in 1937 were met by Columbia Oil's insistence that the refinancing take place simultaneously with the refunding of Panhandle Eastern's bonds.[42] During 1937 and 1938 it was believed by some of Panhandle Eastern's officers that the condition of the market made necessary a convertible issue of preferred to refinance the outstanding preferred. The Mokan interests refused to make any attempts to secure waivers from the minority common stockholders of pre-emptive rights to new common. This, it was claimed, made impossible the issuance of convertible preferred stock—and dampened efforts at refinancing.[43] There was, however, no indication that Columbia Oil would consent to even a convertible issue during the early stages of the refinancing proposal.

---

[42]This refunding has been referred to herein in connection with the stockholders consent clause.

[43]Undoubtedly the Mokan interests were resisting an attempt to dilute their already sub-dominant interests.

[fol. 10834] It will be recalled that pursuant to the settlement with the Mokan receivers, rights to 80,000 shares of Panhandle Eastern's common stock were to be distributed to Mokan stockholders. During the early part of 1939 hearings in the Delaware Chancery Court were being held on the question of this distribution.[44] Because of the pendency of this proceeding the Panhandle Eastern Board, on January 25, 1939, abandoned plans for selling convertible preferred stock. The alleged reason was that the outcome of the proceedings "had a vital bearing on the type of financing which it was possible to do at that time."[45]

On June 21, 1939, the Delaware Chancellor ordered a distribution of the 80,000 shares of Panhandle Eastern's common stock to Mokan stockholders. The tension was broken. A substantial block of stock in the hands of an adversary had been smashed, and in July of 1939 the Finance Committee of Panhandle Eastern was ready to recommend continuation of negotiations with Kuhn, Loeb & Co. for a 4½% cumulative preferred stock without a conversion feature.

It is apparent that up to this time the dominant factor in the timing of the action of the Panhandle Eastern Board was the relative control positions of Columbia Oil and Mokan. The distribution of a strategic block of stock was the "vital" factor in "the type of financing which it was possible to do at that time". When the block was broken it became "apparent", according to the testimony of Sperry, treasurer of Panhandle Eastern, "that we could sell an issue without the conversion privilege attached".

But a new barrier was presented. On August 7, 1939, Creveling, president of Panhandle Eastern and chairman of its board, reported that Columbia Oil had determined

---

[44] Although Sperry, treasurer of Panhandle Eastern testified that hearings on the plan of divestiture (filed in the anti-trust suit) pursuant to which Columbia Gas was to give up its voting interest in Columbia Oil, were in progress at the same time, this is apparently an error. Panhandle Eastern's application states the filing of the plan to have occurred "on or about June 20, 1939." At a meeting of the Panhandle Eastern board on January 11, 1939, reference was made to proceedings in the Federal Court which would commence on January 12, 1939. The reference is apparently to the filing of the government's amended complaint.

[45] Testimony of Sperry, treasurer of Panhandle Eastern.

that the pendency of the plan of divestiture before the Federal Court made plans for refinancing "premature".

Panhandle Eastern tried again, in what was deemed a reviving market, in November of 1939. This time negotiations were undertaken for a joint refunding of the bonds and refinancing of the preferred (the action previously recommended by Columbia Oil) with Kidder, Peabody & Company and Glore, Forgan & Company. On December 28, 1939, the Panhandle Eastern directors recommended to Gano Dunn a program of refunding and retirement. On [fol. 10835] January 19, 1940, Gano Dunn conveyed to the board of Panhandle Eastern the sentiments of Columbia Oil: Columbia was unwilling to consider, at that time, the refinancing of the preferred stock. This ended Panhandle Eastern's efforts at refinancing. Panhandle Eastern, in the face of a market which it appears would have absorbed a refinancing at 4½% is still saddled with a 6% cumulative, participating preferred stock which paid in 1940 a dividend of 10%, and which, according to its terms, after June 1, 1941, would cost the company a premium of $1,000,000 should it attempt a refinancing.

Here again we are not concerned with the validity of Columbia Oil's reasons for withholding its assent to the refinancing. Our concern is the evidence as it relates to control. On the record before us, we think it is eminently clear that applicants have not demonstrated that Panhandle Eastern is not controlled by or subject to the controlling influence of Columbia Oil.

Relationship Between Panhandle Eastern and Mokan

Our discussion to this point indicates that Mokan's position in the affairs of Panhandle Eastern has been in direct opposition to that of the Columbia companies;[46] and that Mokan, at least to date, has not been able to exercise any "controlling influence" (as that term is used in the statute) in the affairs of Panhandle Eastern.

The record shows consistent attempts by the Mokan interests to affect the affairs of Panhandle Eastern. The coexistence of the dominant holdings of Columbia Oil

[46] See notes 33 and 41, supra.

have rendered these attempts futile. So long as Columbia Oil retains its relative position, it is difficult to see how Mokan can succeed in exercising control or a controlling influence in the affairs of Panhandle Eastern. There is no occasion for now holding Panhandle Eastern to be a subsidiary of Mokan and we believe that Panhandle Eastern's application to be declared not to be a subsidiary of Mokan must therefore be granted. The subdominant position of Mokan, however, depends directly on the maintenance intact of the Columbia Oil block. Should this block be broken, it may well be that Mokan would obtain control of Panhandle Eastern. In view of this possibility, we will expressly condition our order, as the statute contemplates, to provide that we may, upon appropriate notice and opportunity for further hearing, reopen the proceeding to examine the effect of any changes in the ownership of Panhandle Eastern's securities upon the issues here presented; and, if the additional evidence warrants such action, revoke our order granting the application.[47]

[fol. 10836] The Plan of Divestiture and The Young Suit

In the course of the hearing before the trial examiner a dispute arose as to the admissibility of certain evidence proffered on behalf of Columbia Oil and excluded by the trial examiner. We are requested to review this ruling. In order to define the issues presented by the ruling it is necessary to comment on certain further proceedings in the anti-trust suit relating to the so-called plan of divestiture.

On or about June 20, 1939, a motion was made on behalf of the Columbia companies for modification of the consent decree in order to implement the provisions of an agreement between those companies allegedly designed to effectuate a divorce of Columbia Gas control over Columbia Oil and Panhandle Eastern.

[47] Section 2(a) (8) provides in part:

". . . The Commission, upon its own motion or upon application, shall revoke the order declaring such company not to be a subsidiary company whenever in its judgment any condition specified in clause (i), (ii), or (iii) is not satisfied in the case of such company . . ."

The events immediately preceding the filing of this plan are pertinent. On January 12, 1939, pursuant to leave of court the government filed a supplemental complaint in the anti-trust suit based on the theory that "The course of events since the entry of said (consent) decree has, however, made it increasingly clear that said decree has been and is ineffectual toward the accomplishment of this specific purpose . . ." i. e., the termination of the "domination or control, direct or indirect, in the affairs of Panhandle Eastern Pipe Line Company by the defendant Columbia Gas & Electric Corporation."

The plan suggested by the Columbia companies includes the following provisions:

1. Columbia Oil will transfer to Columbia Gas all of its properties except for its interest in Panhandle Eastern (this will consist of the outstanding securities of five oil and gasoline subsidiaries),

2. Columbia Gas will surrender to Columbia Oil the preferred stock of Columbia Oil which it holds,

3. "Columbia Oil will agree to use its best efforts to dispose of the $10,000,000 Class A preferred stock of Panhandle Eastern owned by it, at not less than par, to a purchaser who has no connection or interest, direct or indirect, with or in Columbia Gas or through the refinancing thereof by Panhandle Eastern from the sale of a new preferred stock to such a purchaser, and Columbia Oil will apply the monies thus raised to reduce the total of debentures[48] outstanding by at least the amount of $10,- [fol. 10837] 000,000,[49]

4. "All officers and directors of Columbia Oil shall resign upon entry of the order (of the Federal Court approving the plan of divestiture) and the approval of the plan by the Securities and Exchange Commission to the

[48]This refers to debentures of Columbia Oil in the amount of $21,000,000, all held by Columbia Gas.

[49]Upon such a reduction in the outstanding debentures, Columbia Gas will reduce the interest on the remainder to 3%. In addition, certain sinking fund adjustments with respect to the outstanding debentures will be made. Columbia Gas waives any right to acquire ownership of Panhandle Eastern securities owned by Columbia Oil in the event of any default on the outstanding debentures of Columbia Oil held by Columbia Gas.

extent required by law and be replaced by officers and directors not objectionable to the Department of Justice, such directors to own no stock or securities of Columbia Gas. Such directors shall not include anyone who is now, or ever has been, an officer, director or employee of Columbia Gas or any of its subsidiary companies."

It is provided that the representatives of Columbia Oil on the board of directors of Panhandle Eastern shall be directors of Columbia Oil, and it is provided further that "As early as practicable after the entry of the final order approving the plan, the directors of Panhandle Eastern, who now represent Columbia Oil shall resign and be succeeded by persons who shall have been elected as directors of Columbia Oil under this plan."[50]

5. Subject to the approval of the Securities and Exchange Commission, if required by law, Columbia Gas shall sell the stock and indebtedness of the Indiana Gas Distribution (sic) Corporation[51] and the Michigan Gas Transmission Corporation owned by it to Panhandle Eastern at any time within one year from the date of the entry of the order, if said company wishes to buy the same, for a price equal to the actual investment of Columbia Gas therein, provided, Panhandle Eastern also purchases at [fol. 10838] the same time the gas pipe line in Indiana belonging to the Ohio Fuel Gas Company for the price of $355,191 this being calculated by Columbia Gas as the fair value thereof on the basis of a sale by it during the current year of part of this line to an independent company. However, if, during said year, Columbia Gas receives from other sources, not connected directly or indirectly with Columbia Gas, an offer satisfactory to it to purchase said stock and indebtedness, Columbia Gas will give Panhandle Eastern written notification of the proposed terms of sale and give Panhandle Eastern ninety days within which to meet such terms. If, during such

[50] For a period of five years from the date of the entry of the order approving the plan "no person shall be qualified to be elected and serve as a director of Columbia Oil who shall be objectionable to the Department of Justice."

[51] The reference is apparently to Indiana Gas Transmission Corporation. This company it will be recalled owns part of the lines extending eastward from the terminus of Panhandle Eastern's lines toward Detroit

ninety-day period, Panhandle Eastern does not meet the terms of the said outside offer, then Columbia Gas shall be free to accept said offer.

"If, at the expiration of said year, no such sale shall have been made, Columbia Gas will stand ready to sell such stock and indebtedness of said companies on the same conditions as above, subject to the approval of the Securities and Exchange Commission, if required by law, to others. To effectuate such sale, a trustee shall be appointed by the court to sell such properties:

"Provided, that such trustee shall not, unless Columbia Gas consents, accept any bid for such properties at a price amounting to less than its actual investment therein and provided, further, that such property shall not be sold to any purchaser who is in any way connected or interested, directly or indirectly, with or in Columbia Gas."

Columbia Oil, Gano Dunn and others who have testified on the question have attempted to explain Columbia Oil's reluctance to permit the refunding of the Class A preferred stock on the ground of the pendency of this plan of divestiture.

Soon after its filing, a stockholders' suit, known as the Young suit, was brought against the Columbia companies on the theory that effectuating the plan would be unfair to Columbia Gas. An injunction was sought in that suit against consummation of the plan. It was the position of Columbia Oil counsel that the Young suit delayed consideration of the plan, and hence delayed steps by Columbia Oil in the refinancing of the preferred stock. In order to show that the Mokan interests were aiding in the conduct of the Young suit, counsel for Columbia Oil attempted to elicit testimony from W. G. Maguire, President of Mokan and a Director of Panhandle Eastern, relating to conferences and other negotiations between himself and the plaintiff in the Young suit.

Our trial examiner, upon objection, rejected the proffer and refused to permit the line of questioning. The proffered evidence does not tend in any way to dispute the fact that Columbia Oil exercised its influence to prevent the refinancing of the Panhandle Eastern preferred.

But Columbia Oil's action in this respect is important and [fol. 10839] has been cited only because it is a significant illustration of Columbia Oil's power over Panhandle Eastern; the reason for Columbia Oil's exercise of its influence in this transaction is not material here.

The plan of divestiture was approved by the Federal Court on January 18, 1941, in United States vs. Columbia Gas & Electric Corporation, et al., 36 F. Supp. 488. The government requested as a condition of approval of the plan that certain of the holders of common stock of both Columbia Gas and Columbia Oil dispose of their holdings in Columbia Oil. Among these was Philip G. Gossler who, excluding the United Corporation, is the largest single holder of Columbia Oil common stock and is a substantial holder of Columbia Gas common and chairman of the Columbia Gas board. It was also requested that the other officers and directors of Columbia Gas divest themselves of their holdings in Columbia Oil. The court granted both requests and its approval of the plan was conditioned upon the disposition to disinterested persons of the Columbia Oil holdings of Gossler and the other officers and directors of Columbia Gas. By the terms of the plan its consummation is also subject to our approval "if required by law."

It is urged that the pendency of this plan should be taken into consideration "as an element in favor of granting the applications of Columbia Gas with respect to Columbia Oil and Panhandle Eastern." There is cited to us as a "precedent" to be followed the International Paper & Power Company case, 4 S. E. C. 873 (1939).

The difference between the instant case and the Paper & Power case is material. In the Paper & Power case effective steps were taken, prior to the granting of the application, to deposit the shares of statutory subsidiaries with three liquidating trustees who were to proceed immediately with the liquidation. In this case the situation remains unchanged until certain conditions are satisfied. These involve the disposition of personal holdings of individuals interested in the Columbia companies. No machinery has been set in motion for such a disposition, and we have received no guarantees or assurances as to when such a disposition will take place. In the Paper & Power case the

entire plan of liquidation was put before us as a plan pursuant to Section 11 (e) of the Act. That Section provides that the Commission may, upon request of a company filing a plan, apply to a court to enforce and carry out its terms and the court may appoint a trustee for that purpose. In the Paper & Power case the plan contained a request to the Commission to seek the aid of a court if the liquidating trustees were unable to dispose of the assets of the trust estate. It included also a provision depriving the beneficiaries of any right to control the disposition of the trust estate upon such an application by the Commission. These factors were specifically relied upon by us in our order disposing of that case.

Comparable factors do not exist here. For an indeterminate period following our disposition, the relationship of the companies involved will remain unaltered. We cannot, therefore, accept the pendency of the plan of divestiture as a determinant factor in favor of granting the applications herein filed.

[fol. 10840] Conclusions

The applicants have asked for orders declaring certain companies to be outside the scope of a statute designed to prevent the reoccurrence of evils which in the past have occurred in the public utility holding company—subsidiary relationship. Not only their status as applicants, but the fact that they seek exemption from the automatic operations of the definition of the term "subsidiary" in Section 2 (a) (8), and the fact that such exemption would relieve companies from the operation of remedial legislation, places upon the applicants the burden of proving the non-existence of control, controlling influence, or intermediacy in the control relationship.[52]

We cannot find that the applicants have demonstrated that Columbia Oil and Panhandle Eastern are not controlled by Columbia Gas, or that their management or poli-

[52] Detroit Edison Company vs. Securities and Exchange Commission, (C. C. A. 6th, decided May 12, 1941); Securities and Exchange Commission vs. Sunbeam Gold Mines Company, 95 F. (2d) 699 (C. C. A. 9th, 1938); Piedmont & Northern Railway vs. Interstate Commerce Commission, 286 U. S. 299, 76 L. Ed. 1115 (1932); Schlemmer vs. Buffalo, etc., 205 U. S. 1, 51 L. Ed. 681 (1907); Grand Trunk Railway vs. United States, 229 Fed. 116 (C. C. A. 7th, 1916).

cies are not subject to a controlling influence by Columbia Gas within the meaning of Section 2 (a) (8) of the Act. Nor can we find that Panhandle Eastern is not controlled by Columbia Oil, or that its management or policies are not subject to a controlling influence by Columbia Oil within the meaning of such section. On the contrary, we are of the opinion that such controlling influences have been shown to exist as to make it necessary and appropriate in the public interest and for the protection of investors and consumers that both Panhandle Eastern and Columbia Oil, in respect of Columbia Gas, and that Panhandle Eastern in respect of Columbia Oil, be subject to the obligations, duties, and liabilities imposed in the Act upon subsidiary companies of registered holding companies. S. 125 (1939); American Gas and Electric Company, 9 S. E. C. ..... (1941), Holding Company Act Release No. 2749; H. M. Byllesby & Company, 6 S. E. C. 639 (1940); The Hartford Gas Company, 8 S. E. C. .....: (1941), Holding Company Act Release No. 2613.

However, we do find that Panhandle Eastern has demonstrated that it is not now controlled, directly or indirectly, by Mokan (either alone or pursuant to an arrangement or understanding with one or more other persons) either through one or more intermediary persons or by any means or device whatsoever; that it is not an intermediary company through which such control of another company is exercised; and that its management and policies are not subject to a controlling influence, directly or indirectly, by Mokan (either alone or pursuant to an arrangement or understanding with one or more other persons) so as to make [fol. 10841] it necessary or appropriate in the public interest or for the protection of investors or consumers that Panhandle Eastern, in respect of Mokan, be subject to the obligations, duties, and liabilities imposed in the Act upon subsidiary companies of holding companies.

An appropriate order will issue conditionally granting the application with respect to the relationship between Panhandle Eastern and Mokan, and in all other respects denying the applications under Section 2 (a) (8).

By the Commission (Chairman Eicher, Commissioners Healy, Henderson, and Pike).

FRANCIS P. BRASSOR,
Secretary.

[fol. 10842] United States of America.

Before The Securities and Exchange Commission.

At a regular session of the Securities and Exchange Commission, held at its office in the City of Washington, D. C., on the 27th day of May, A. D., 1941.

Order Denying Applications In Part and Granting Applications In Part.

In the Matters of

Panhandle Eastern Pipe Line Company,

File Nos. 31-109, 31-493, 31-108.

Columbia Oil & Gasoline Corporation,

File Nos. 31-107, 31-106.

Columbia Gas & Electric Corporation,

File Nos. 31-422, 31-423.

Public Utility Holding Company Act of 1935—
Section 2 (a) (8)

Panhandle Eastern Pipe Line Company having applied under Section 2(a) (8) of the Public Utility Holding Company Act of 1935 for an order declaring it not to be a subsidiary of Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation or Missouri-Kansas Pipe Line Company; Columbia Gas & Electric Corporation having applied under the same section for an order declaring that neither Columbia Oil & Gasoline Corporation nor Panhandle Eastern Pipe Line Company is its subsidiary; and Columbia Oil & Gasoline Corporation having applied for an order under the same section declaring it not to be a subsidiary of Columbia Gas & Electric Corporation, and a hearing on said applications having been duly held; briefs having been filed and oral argument heard; and the Commission having this day issued its Findings and Opinion;

It Is Ordered that the said applications, except for the application of Panhandle Eastern Pipe Line Company re-

questing an order declaring it not to be a subsidiary of the Missouri-Kansas Pipe Line Company, be, and the same hereby are, denied; and that the application of Panhandle Eastern Pipe Line Company for an order declaring it not to be a subsidiary of the Missouri-Kansas Pipe Line Company, be, and it hereby is, granted, upon condition, however, that if at any time it appears to the Commission that [fol. 10843] the material facts and circumstances stated in its Findings and Opinion herein are changed, the Commission may reopen these proceedings and, in that event, if after notice and opportunity for further hearing, Missouri-Kansas Pipe Line Company, or Panhandle Eastern Pipe Line Company, shall fail to sustain the burden of proving that Panhandle Eastern Pipe Line Company is not controlled, as intermediary through which control is exercised, or subject to a controlling influence by Missouri-Kansas Pipe Line Company within the meaning of Section 2 (a) (8) of the Public Utility Holding Company Act of 1935, so much of this order as grants the application of Panhandle Eastern Pipe Line Company to be declared not to be a subsidiary of Missouri-Kansas Pipe Line Company may be revoked.

By the Commission.

(Seal) FRANCIS P. BRASSOR,
Secretary.

[fol. 10844] For Immediate Release Saturday, June 21, 1941.

Securities and Exchange Commission,
Washington.

Holding Company Act

Release No. 2834

United States of America.

Before The Securities and Exchange Commission.

At a regular session of the Securities and Exchange Commission held at its office in the City of Washington, D. C., on the 21st day of June, A. D., 1941.

Supplemental Order Amending Findings and Opinion.

In the Matters of

Panhandle Eastern Pipe Line Company,
File Nos. 31-109, 31-493, 31-108.

Columbia Oil & Gasoline Corporation,
File Nos. 31-107, 31-106.

Columbia Gas & Electric Corporation,
File Nos. 31-422, 31-423.

Public Utility Holding Company Act of 1935—
Section 2 (a) (8)

It appearing to the Commission after further consideration that certain portions of its findings and opinion issued herein on May 27, 1941 (Holding Company Act Release No. 2778), which findings are attached to the Commission's Order of the same date, should be amended;

It Is Ordered that there be substituted for the figure "$4,945,500," in line 5 of that part of footnote 8 which appears on page 6 of the said Release, the figure "$5,495,000," and that there be deleted from line 6 of the said portion of footnote 8 the words "that amount in"; and

That there be deleted the words "and Vice-President" from line 11 of page 7 of the said Release; and

That there be deleted from lines 1 and 2 of footnote 12, appearing at page 8 of the said Release, the words "in heavy default on its notes and," and that there be further deleted from the said footnote the entire last sentence thereof; and

That there be substituted for the words "Columbia Oil" appearing in the second line of paragraph 3 of footnote 14 at page 10 of the said Release, the words "Columbia Gas"; and

That there be deleted from line 18 of page 11 of the said Release, in reference to R. H. Delafield, the words "Director and"; and

[fol. 10845] That there be deleted from lines 2 and 3 of footnote 24, appearing at page 15 of the said Release, the

words "western Illinois border and extended to the Illinois-Indiana border," and substituted therefor the words "Illinois-Indiana border and extended eastward to a point near Muncie, Indiana"; and

That there be deleted from line 13 of the text, at page 21 of the said Release, the words "Columbia Gas" and substituted therefor the words "Columbia Oil"; and

That there be deleted the word "(sic)" and the designation of a footnote [51] from line 25 of page 30 of the said Release; and

That there be deleted the footnote designated as footnote [51] which appears on page 30 of the said Release; and

That the footnote designated as footnote [52] which appears at page 33 of the said Release be designated as footnote [51].

By the Commission.

[fol. 10958] (Exhibit 30.)

Written Testimony of Witness Rufus M. Smith.

[fol. 10959] Statement of Qualifications and Experience of Rufus M. Smith.

1. Name, address, and age.

Rufus M. Smith, Kansas City, Missouri, age 38.

2. Present position:

Geologist, Panhandle Eastern Pipe Line Company.

3. Education:

May 1929—Graduated from Colorado School of Mines, with degree of Geological Engineer.

4. Business Experience:

1926 to 1927—Instrument man, scout and torsion balance assistant with Midwest Refining Company, Denver, Colorado.

1929 to 1930—Geologist, Gulf Production Company, Houston, Texas.

1930 to 1932—Engineer and Geologist for Panhandle Eastern Pipe Line Company.

1932 to 1934—Assistant construction superintendent, Phillips Petroleum Company, Kansas City, Missouri.

1934 to 1936—Agricultural Engineer, Department of Agriculture, headquartering at Kahoka, Missouri.

1936 to 1941—Geologist, Panhandle Eastern Pipe Line Company, Kansas City, Missouri.

[fol. 10960] 5. Duties:

My duties as geologist for Panhandle Eastern Pipe Line Company have required me at all times to keep in close touch with development and producing conditions in the areas in which Panhandle Eastern owns reserves; to watch the performance of the wells in these fields; and advise the management with respect to its producing operations.

[fol. 10961] Written Testimony of Rufus M. Smith.

I came with the Panhandle Eastern Pipe Line Company organization in April 1930 as a geologist, and have been well acquainted with the development operations of that company in the Texas and Hugoton Fields during the entire period of my connection with the company. I am familiar with its gas reserves, the condition and productivity of its wells and those belonging to other producers with whom it has gas purchase contracts, and with the formations underlying the acreage from which said company now takes gas. During my service, I have had occasion to continuously study the producing conditions in the areas from which the company obtains its gas supply.

In the testimony which follows, I shall deal primarily with the Panhandle Eastern gas reserves located in the State of Texas.

In my work, it has been necessary for me to keep in close touch with the developments in those portions of the field in which Panhandle Eastern Pipe Line Company has interests and, in a more general way, to keep advised concerning developments in other portions of the field. I have, from time to time, carefully studied the Annual Reports of the Railroad Commission of Texas, and these reports have materially assisted me in reaching the views which I now have with respect to conditions in that field.

Description of the Field:

It is recognized by geologists generally that the Panhandle oil and gas field overlies a part of a buried chain of granite mountain peaks which extends in a Southeasterly course through this field. It is believed my many that an extension of these mountains comes to the surface as the Wichita Mountains in Oklahoma, at an elevation of approximately 1,000 feet above sea level. The Panhandle oil and gas field extends in a Southeast-Northwest direction, [fol. 10962] cutting across portions of Collingsworth, Wheeler, Gray, Carson, Hutchinson, Potter and Moore Counties, into Hartley County, Texas. The field is approximately 125 miles in length and has an average width of approximately 20 miles. As classified by the Railroad Commission, 1,085,270 acres produce sweet gas and 372,437 acres produce sour gas. Sour gas is gas containing sulphur, and is not suitable for ordinary pipe line purposes

unless the sulphur content is removed. The Texas Railroad Commission also recognizes as proven, or semi-proven, for oil an area of approximately 250,000 acres. Approximately 40% of the producing acreage is included in the gas producing areas referred to, due to the fact that above the oil are horizons from which free gas is produced. The oil production in the field is confined to a series of some 30 pools extending along the North flank of the field for a distance of about 90 miles.

Producing Formations:

Four formations or zones in the Panhandle Field are productive. These zones are: (1) Brown dolomite, (2) gray dolomite, (3) gray lime, (4) granite wash. The granite wash formation is an eroded and disintegrated granite accumulation which formed along the lower flanks or slopes of the granite ridge. The lime and dolomite are marine sedimentary formations which were deposited on the sides and over the axis of the granite ridge in later geologic times.

Development:

In 1918, while the area was being explored for oil, gas was discovered in Northern Potter County. Following the completion of the discovery well, several other wells were drilled into the gas pay but oil was not discovered until 1921 when the Burnett well, drilled by Gulf Production Company was completed in Northern Carson County with an initial daily production of approximately 200 barrels. Development of the field was rather slow and the total [fol. 10963] daily oil production in the entire field at the end of 1925 was not more than 5,500 barrels.

In the early part of 1926, the Borger oil pool in Hutchinson County was discovered and immediately thereafter an intensive drilling program was carried on. Within a few years, drilling operations progressed to such an extent as to enable those studying the field to reach a reasonable conclusion as to the probable extent of the field. Oil pools were discovered in Moore, Hutchinson, Carson, Gray and Wheeler Counties and, as a result of the drilling

of other wells in a search for oil, substantial portions of the area now known as the Panhandle Field were found to contain no oil but to contain large volumes of gas.

Many oil wells located in various portions of the field were drilled through several gas containing strata before entering the oil horizon and, in many instances, the wells were completed in such a manner that gas from the gas strata was produced along with the oil from the lower oil strata. As a result, a quantity estimated by the Texas Railroad Commission to be in excess of two trillion cubic feet of gas, most of which came from the free gas strata above the oil, was produced with the oil and wasted into the air.

Panhandle Eastern Activities:

Panhandle Eastern Pipe Line Company entered the Panhandle oil and gas field by purchasing acreage in February 1930. The purchases were made through the activities of its then wholly owned subsidiary (later dissolved) corporation, Texas-Interstate Pipe Line Company. In further testimony given by me, the two will be treated as the Panhandle Eastern project.

When Panhandle Eastern commenced to assemble its acreage reserves in the Panhandle Field, the general extent of the field was fairly well known, but the information obtained by the drilling theretofore done was not adequate to justify definite conclusions with respect to the produc- [fol. 10964] ing possibilities of the various portions of the field. At that time, other companies who desired to produce gas from the Panhandle Field were also seeking reserves in that field and it was impossible definitely to determine the areas in which Panhandle Eastern would build up the backbone of its gas reserves. It was necessary, therefore, that leases be purchased in various portions of the field in the general area from which Panhandle Eastern expected to market gas.

1932 Acreage:

Exhibit 19 is a map prepared under my direction from the records of the company, showing in red color the acreage on which Panhandle Eastern Pipe Line Company had leases as of March 31, 1932. Certain tracts are shown

on this map as belonging to Panhandle Eastern which are no longer a part of its reserves. Some of these tracts were, by later developments, found to be outside the producing area; some were found to be located in sour gas territory; some located in areas which later were subjected to excessive drainage; and some were found to be in areas of small open flow capacities. Most of the leases, however, which were acquired at the inception of the project, were, by later development by Panhandle Eastern as well as by drilling operations of other owners of oil and gas leases, proven to be located in choice gas producing areas, and constituted the nucleus for the company's present Texas gas reserve.

Building Reserves:

This method of building a reserve in a new field is not an unusual one. A purchaser of leases in an undeveloped area knows that the choice locations can only be determined after a considerable development is carried on that some of the leases may later be found to be of little or no value to it. Therefore, when selecting and purchasing leases the policy of checkerboarding, or purchasing in several apparently favorable spots, is frequently followed with a view of later selecting the tracts which will be re- [fol. 10965] tained, consolidating positions in the area found most prolific, and disposing of those leases which are not believed to be of sufficient economic value to justify drilling by the particular company which has made the investment. Such disposition is accomplished by selling or exchanging the less desirable leases or, if no other disposition can be made, by surrendering such leases and thus obtaining relief from the burdens of delay rentals, taxes and other carrying charges.

It is often the case that a lease which, because of its location, is of little economic value to one company will be of great value to another, and that exchanges of leases can be effected to the advantage of both exchanging parties. It also is frequently possible to arrange with lessors where tracts are small to effect consolidations of separate leases into an agreement covering at least a section, which is considered an economic drilling unit in this area. This enables the lessee to save substantial drilling and producing expense without in the least dam-

aging the value of either consolidated lease as a gas reserve, and such consolidations are also to the advantage of the respective lessors.

Thus, by consolidating acreage and positions and by a culling process, a company, after selecting general areas, can improve its position in selected areas and round out its reserves so as to have a more favorable position than would be the case if its reserve were represented by only the separate leases as originally acquired.

Panhandle Eastern's Original Policy:

In assembling its original leases, Panhandle Eastern made its principal purchases in Moore County and in Northwestern Carson and Northeastern Potter Counties and constructed its gathering lines to serve that general area. It was at that time known that the area was one of high gas content, but the boundaries of the field had not been determined, the exact location of the boundary line [fol. 10966] between the sour gas and the sweet gas areas had not been established, and the best producing portions of the general area could not, with exactness, be located. In acquiring its leases in that area, Panhandle Eastern spread its purchases over the selected area to the best of its ability under existing conditions so as to be certain that it would have good producing properties when, as a result of further development in the general area, the locations of the best producing portions could be determined.

The Company's Development Policy:

During the years which have passed since the company first commenced taking gas from the field, it has kept in close touch with conditions in the field, and when selecting the acreage which it desired to retain as a part of its reserves, has applied the information thereby acquired. It has been my duty, as an employee of the company, during all this period to keep informed concerning developments in the area and to communicate that information to the management.

In the process of culling, the company has exchanged some leases, sold others, and released some which were thought not to fit into its program. Many additional leases also have been acquired. Lease consolidations

either with other old leases or with acreage more recently acquired have been effected. Substantial portions of the reserves now held by the company are held on renewal and consolidation agreements, rather than under the terms of the original leases. The presently owned reserves of Panhandle Eastern, on which are now 57 producing wells, are principally located in the areas first selected in 1930—in Southern Moore County, Northwestern Carson County and Northeastern Potter County.

Gas Purchase Contracts:

In addition to its owned leases, Panhandle Eastern holds gas purchase contracts covering the production from other wells located in the same general areas as its [fol. 10967] own. These contracts, except one with Northern Natural Gas Company, covering production from two wells, run for the lives of the leases covered. Since they are located in the same areas as its own producing properties, the company can construct and operate its gathering lines more economically than if the wells served were in different parts of the field. There are now 53 producing wells on leases covered by such gas purchase contracts.

1941 Acreage Map:

Exhibit 20 is a map prepared under my supervision, showing in colors on the lower section the tracts which constitute the present reserves (owned and held by gas purchase contracts) of Panhandle Eastern in the Panhandle Field. The tracts constituting such reserves are shown on said map in three classifications:

(a) those marked in pink are tracts which the company owns both oil and gas rights;

(b) those shown in pink with yellow border being those on which it owns gas rights only; and

(c) those shown in green being those tracts on which it holds gas purchase contracts.

The locations of Panhandle Eastern's wells and the wells of other producers with whom it holds gas purchase contracts are shown on the Exhibit.

The Panhandle Structure:

Exhibit 21 is a map, prepared under my direction, showing the structure of the west portion of the Panhandle

Field as that structure is recognized generally by geologists. The contours shown thereon are based on elevations above sea level of the top of what is locally known as the "Panhandle Lime." This structure map shows that the properties, in the general area in which Panhandle Eastern's reserves are located, are favorably located for the production of gas.

[fol. 10968] The line marked "A-A'", shown on this structure map, is the approximate location of the cross-section portrayed on the cross-section map next referred to.

Typical Cross Section:

Exhibit 22 was prepared by me for the purpose of illustrating the geologic formation existing in the general area in which Panhandle Eastern's Texas reserves are located. It represents the typical condition existing on a line extending from North Central Potter County to Northwest Hutchinson County along the general course indicated by line A-A', shown on Exhibit 21. The portions marked in red illustrate typical areas in which gas is found. The portions marked in green represent typical areas in which oil is found and the portion marked in blue represents typical areas in which water is found.

The "granite wash" was first formed as accumulations of disintegrated granite, washed down along the slopes and into the valleys near the mountains. This disintegrated granite is usually very porous and permeable. Subsequently the dolomite and lime formations were laid down as marine sedimentary deposits over the peaks and extending out from the mountains. It is generally believed that the area was submerged and uplifted several different times, resulting in the interbedding of "granite wash" deposits with the lime and dolomite formations.

Beds of anhydrite and other impervious formations form a cap rock over the underlying porous and permeable formations represented by the granite wash, lime and dolomite.

It is generally believed by geologists that subsequent to the time these porous formations were laid down, oil and gas migrated into the area from source beds at some other point, possibly the Anadarko Basin. Thereupon,

the oil, gas and water assumed their natural positions with relation to each other, that is the water being the [fol. 10969] heaviest, at the bottom, then the oil and then the gas.

As clearly appears from Exhibit 22, the different producing formations are interconnected. This is true in practically all instances. Necessarily, therefore, production from any of the horizons shown has a direct effect on all other producing formations in the reservoir. It will also be noted that the same producing formation will at some points produce gas only; at other points gas and oil; at other points, gas, oil and water; at others oil and water; and at still others only water, depending on the elevation at which the particular formation is encountered in a particular well.

Formations Encountered In Drilling Wells:

The well shown on Exhibit 22 is intended to represent a typical well. It will be noted that after passing through the cap rock the well pierces several formations producing only gas; then one producing oil; and finally one bearing water only. Unless this water is controlled by plugging operations, the reservoir pressure will force it into the well bore and a mixture of oil and water will result. Upon depletion of the oil near the well bore, there is danger that the water will be forced into the producing formations which originally contained oil and thus seriously damage the oil producing ability of that formation. There is also a danger that water will also be forced into and damage some of the upper gas producing formations.

In the early history of the Panhandle Field, operators frequently adopted the practice of completing their wells without sealing off the free gas in the formations above the oil. In many instances this was done for the purpose of utilizing the gas as an aid in the recovery of the oil. In some instances, casings were split or the casing seats were damaged so as to permit the entry of gas from the gas bearing strata to assist in the recovery of the oil. As a result of such operations, tremendous volumes of gas, [fol. 10970] estimated by the Texas Railroad Commission at two trillion cubic feet, have been produced from oil wells and in most instances have been permitted to waste into the air.

In some areas of the field, oil is found, with no free gas encountered in the formations above the oil zone. This is especially true in certain areas north of Borger, Texas, where the amount of gas produced with the oil has been negligible.

Gas only is found in the greater part of the Panhandle field where the producing formations occur at the higher elevations. The Texas Railroad Commission has estimated that while the field, as a whole, covers approximately one and one-half million acres, the oil producing portion covers only approximately 250,000 acres of which approximately 40% contains free gas in formations above the oil.

Effect of Production:

It will be readily recognized, from an inspection of Exhibit 22 that production of gas at any point in the reservoir will result in gas moving toward the well bore from which the production is taken, and that such migration of gas will result in lowered pressures and less content in the areas from which the gas has migrated, since gas moves from an area of high pressure to one of lower pressure, as water runs down hill.

It will be noted that production of oil or gas is not limited to any particular zone in the lime series, but may occur at any of the zones where the proper porosity and permeability exist.

Division of Panhandle Field:

As has been stated, the Panhandle field extends in length approximately 125 miles and has an average width of approximately 20 miles. The Railroad Commission has, for purposes of administration, divided the gas producing portions of the field into three zones, described as the East Field, the West Field and the Sour Field. At [fol. 10971] a point in the East part of Gray County, where a low pressure area and a structural restriction exist, the Commission has placed a dividing line between the East Field and the West Field. The East Field produces oil and sweet gas. Most of the gas produced in that field is marketed at points in Oklahoma, Kansas and North Texas. The gas producing section of the field lying West of this line is divided into two fields, one being

known as the West Gas Field and the other as the Sour Gas Field. The sour gas field is that portion of the Panhandle Field West of the West boundary line of the East field, from which gas with sulphur content is produced. Oil is produced from pools in each field. The West Gas Field is the area in which the properties of Panhandle Eastern Pipe Line Company are located and my studies have been largely confined to this field.

Reservoir Pressure:

The initial pressure of the Panhandle Gas Field was approximately 430 pounds per square inch at the wellhead, corresponding to a pressure in the producing horizon of approximately 471 pounds per square inch. This pressure is subnormal when compared with reservoir pressures at similar depths found in most other fields. Many geologists attribute this subnormal pressure to an assumption that the pressure is the result of past or present interconnections with the formations outcropping in the Wichita Mountains in Oklahoma, which have an elevation of approximately 1,000 feet above the producing horizon in this field, and water entering the outcroppings there, and exerting pressure on formations at this elevation would produce a hydrostatic head, creating a pressure of approximately 471 pounds.

Continued production of oil and gas from this field has resulted in substantial reductions in pressure. The extent and effect of this pressure drop will be discussed in connection with a presentation of a series of rock pressure maps.

[fol. 10972] Rock Pressure Map 1932:

I have already pointed out that when the field was first discovered, the wel head pressures were approximately 430 pounds per square inch. As a result of withdrawals prior to 1932, the pressures had commenced to drop materially in the areas along the North flank of the structure. Exhibit 23 has been prepared for the purpose of showing the pressure condition existing that year. The area colored yellow represents those portions of the field which still had pressures above 400 pounds. That band then covered the greater portion of the free gas producing area. Other colored bands shown on the map represent areas having pressures from 300 to 400 pounds, from 200 to 300 pounds

and below 200 pounds. It will be noted that the areas close to oil production were those affected most seriously by the pressure drops. This was due to the circumstance that most of the gas which had been theretofore taken from the field had been produced with the oil in the manner already pointed out. At that time very small quantities of gas had been taken from the West field by Natural Gas Pipe line companies.

Gas Pipe Lines:

By 1933, several lines had been constructed into the field for the purpose of transporting large volumes of gas out of the West sweet gas field to distant markets. Panhandle Eastern's line was completed in 1932. Lines were also constructed by Texonia Natural Gas Company and Natural Gas Pipeline Company of America for the purpose of furnishing gas to Chicago and other Northern markets, by Canadian River Gas Company and Colorado Interstate Pipe Line Company for the purpose of furnishing gas to Denver and other points, by Northern Natural Gas Company for the purpose of furnishing gas to Omaha, Minneapolis and other points by South Plain Pipe Line Company for the purpose of furnishing gas to points in the South plains of Texas, and by the Empire Companies for the purpose of furnishing gas to Kansas City and other points in Kansas and Missouri.

[fol. 10973] Rock Pressure Map 1938:

Exhibit 24 reflects the rock pressure pattern in the West Field in 1938, and it will be noted by comparing this map with Exhibit 23 that during the intervening six years substantial changes had come about as a result of withdrawals.

The map for 1938, as well as maps which will be presented by me illustrating the conditions existing in 1939, 1940 and, so far as known, 1941, are contoured on 50 pound pressure bands instead of 100 pound pressure bands, as was the case with the 1932 map. The 1932 map was prepared by me from one in our files, the source of which I do not now know. The maps for 1938, 1939 and 1940 are all taken from official rock pressure maps issued by the Railroad Commission of Texas and present the Commission's views as to the locations of the various pressure bands in the field. The incomplete map for 1941 is based on official

Railroad Commission tests which were incomplete at the time the map was made and it portrays only the Commission's tests of some of the wells from which Panhandle Eastern produces gas.

It is shown by the 1938 map that some portions of the field nearest the oil producing areas, had dropped to a pressure below 150 pounds; however still a small area in the field had pressures above 400 pounds. Most of the Panhandle Eastern properties and the wells of other producers from which it purchases gas are located in areas where pressures were then 350 to 400 pounds.

Rock Pressure Map 1939:

Exhibit 25 is a rock pressure map showing the pressure condition in the West Field in 1939. It will be noted that, as shown on that map, most of the properties constituting Panhandle Eastern's reserves are located in the areas where pressures were still from 350 to 400 pounds and that the yellow, or highest pressure area, is considerably reduced from that shown on the 1938 map.

[fol. 10974] Rock Pressure Map 1940:

Exhibit 26 reflects the pressure situation in the West Field which was found to exist as a result of the tests made by the Railroad Commission in 1940. A comparison of that map with the map for 1939 shows that the pressure band representing presures of 300 to 350 pounds has extended at some points further into the area in which Panhandle Eastern's reserves are located, but the overall picture does not reflect a very great encroachment. This map shows that there had been a further reduction of the area containing pressures above 400 pounds and that all pressures were gradually being lowered to the West and South.

Sour Gas Line:

On Exhibit 26, in heavy dashed lines, is shown the generally recognized sour gas line as now recognized by the Railroad Commission. The wells drilled generally North of that line produce sour gas only, while gas wells drilled South of the line produce sweet gas. Because of the presence in the sour gas of sulphur compounds in appreciable amounts, it is not suitable for use for light, heat and fuel purposes unless first subjected to a processing

for the removal of the sulphur. To date, it has not been found economically advisable by any producer taking gas from the field for ordinary pipe line purposes to process the sour gas. As a result, the sour gas is used only for the manufacture of carbon black. The Texas Legislature has, by statute, prohibited the use of sweet gas for that purpose but has expressly permitted the use of sour gas. Approximately 80% of the carbon black manufactured in the world is manufactured in the Panhandle of Texas. The demand for sour gas for the manufacture of carbon black has been such that the owners of gas producing properties in the sour gas area have been able to produce gas from that area in a much greater proportion to their reserves in place than those holding gas properties in the sweet gas areas could produce. Of necessity, the result of [fol. 10975] production of gas from the smaller sour gas area in a greater proportion than those holding gas reserves in the sweet gas area are able to produce and market their gas will result in continued drainage from the sweet gas area to the sour gas area.

Rock Pressure Map 1941:

Exhibit 27 is a rock pressure map showing the pressures existing in a portion of the wells in Panhandle Eastern's reserves, reflected by tests of the field now being taken. The portions of the reserves colored are only a portion of Panhandle Eastern's reserves, and lie principally within the pressure bands 300 to 350 pounds. Some of the other leases immediately adjoining that band and constituting a substantial part of Panhandle Eastern's reserves will be found to still lie within the 350 to 400 pound pressure bands when reports adequate to permit drawing of contour lines are available for completion of the rock pressure tests of 1941.

Sand Thickness and Porosity:

Numerous qualified geologists have reached the conclusion that the average "pay thickness" in the better portion of the gas producing area in the Panhandle field is approximately 70 feet and that the average porosity of such pay formations is approximately 20%. From these determinations, they have estimated the average content in that area to have been approximately 17.7 million cubic feet per acre. I concur in that conclusion.

Exhibits 28 and 29:

Irrespective of what the average sand thickness and the average porosity of the field may be, it is unquestionably true that in different portions of the field great variations are found as to thickness of pay or percentage of porosity, or both such factors. This obvious situation is reflected in and evidenced by, the varying initial potential producing capacities of the wells heretofore drilled.

[fol. 10976] I have caused to be prepared two series of graphs which clearly demonstrate the variability in both pay thickness and porosity. These graphs are based on information obtained from a close study of the logs of 34 wells, all of which are located in the West Panhandle Field and in or near the areas where Panhandle Eastern's reserves have been selected. These two series of graphs are Exhibits 28 and 29.

Wells Used for Graphs:

On Schedule 1 of Exhibit 30, I have shown the wells used as a basis for this study, their locations, the pay thicknesses as indicated from the well logs, and the initial open flows in millions of cubic feet. The well numbers shown on that schedule correspond to the figures appearing at the top of Exhibits 28 and 29 and to the right of the graphs shown thereon.

Explanation of Graphs:

The vertical scale on these graphs represents the thickness of pay in feet, while the horizontal scale reflects the initial volume in millions of cubic feet. The dots shown on each graph indicate the thickness of pay plotted against the open flow volume at the time that amount of gas pay had been drilled. For example, it appears from Graph 1 that when 10 feet of gas pay had been drilled two million open flow volume had been obtained, but when 25 feet of pay had been drilled an aggregate of 6.5 million cubic feet had been obtained. Also, on Graph 2 when 35 feet of pay had been drilled an open flow volume of 17.5 million had been developed, when 51 feet of pay had been drilled, 25 million cubic feet of potential had been developed, and when 76 feet of pay had been drilled an aggregate of 123.4 million cubic feet potential had been developed.

These graphs clearly demonstrate that the productivity of the wells does not always increase in the same proportions as the increases in aggregate pay thickness, which necessarily means that in the different pays encountered varying percentages of porosity exist.

[fol. 10977] Productivity Map:

That portion of Exhibit 31, which represents the West Panhandle Field, was prepared for the purpose of showing the varied productivity existing in the Panhandle Field, as reflected by the varying initial potentials at virgin pressure. The legend shows the classification of the productivity bands. This map has been, under my direction, made from one compiled several years ago by C. Don Hughes, a geologist of Amarillo, Texas, who has been familiar with the Panhandle Field since development first began. A few slight changes have been made by me, as a result of information not available at the time the Hughes map was prepared.

It will be noted that this productivity map shows that most of the properties in the area where Panhandle Eastern's reserves are located are in the bands of high productivity.

Gas Content in Panhandle Eastern's Reserves:

I have made a study with respect to the reserves originally contained in the Texas acreage on which Panhandle Eastern holds gas leases and the reserves in the Texas acreage covered by gas purchase contracts belonging to that company.

It is recognized by geologists generally that, based on an average sand thickness of 70 feet and an average porosity of 20%, the average original content in the better portion of the field was approximately 17.7 million cubic feet per acre at virgin pressure. It is also recognized generally by geologists that the average original content in the poorer class of acreage (in which I include wells having less than 5 million cubic feet potential open flow at virgin pressure) was approximately 5 million per acre.

One of the earliest complete studies of the field was that by Cottner & Crum in the spring of 1932, based on the best data then available. They at that time estimated that for acreage having initial open flow capacities of 10

[fol. 10978] million cubic feet or more, the average thickness of pay was 65 feet and the average porosity was 20% resulting in an average content of 15.289 million cubic feet per acre. They then estimated a content of 6 million cubic feet for the additional poorer class of acreage. Since their study was made, the size of the recognized field has been somewhat increased so as to take in additional acreage, additional data has indicated that thicker pay exists than had been originally assumed, and further developments have caused most geologists to believe that the average pay thickness in the better areas of the field is at least 70 feet. As pointed out in connection with my discussion of Exhibits 28 and 29, it is also now clearly proven that the producing formations in the field vary greatly in percentage of porosity.

In making my study, I thought it reasonable to use an original content of 17.7 million cubic feet per acre for the better class of acreage (which I classify as Class I) and a content of 5 million cubic feet per acre for the acreage with initial open flows at virgin pressure of 5 million feet or less (which I classify as Class II).

After adopting these figures (which I think are conservative), I have classified the acreage in the Panhandle field held by Panhandle Eastern under owned leases and the acreage on which it holds gas purchase contracts, so as to determine the amount of acreage included within its reserves having original open flow capacities at virgin pressure of 5 million cubic feet daily and above and the acreage having initial potentials at virgin pressure below 5 million cubic feet. After applying to these classes the original per acre content which I thought appropriate, I reached the conclusion that the original gas content in the 65,429 acres constituting Panhandle Eastern's present gas reserves computed on a pressure base of 16.4 pounds absolute, was approximately 1,133,709,300,000 cubic feet. The results of the computation just described are reflected in Schedule 2, Exhibit 30. The schedule is, I think, self-explanatory. Column [fol. 10979] C shown thereon is informative and is not used in reaching the results shown in Column E.

Remaining Gas Content in Texas Reserves:

After determining the original gas content of the reserves of Panhandle Eastern in the Panhandle field, including both that under owned leases and that covered by gas purchase contracts, I calculated the gas remaining as of July 1, 1941, in the respective classes described in Schedule 2 of Exhibit 30. In making this computation, I used abandonment pressures for the acreage involved at 150, 125, 100, 75, 50, 30, 25 and 0 pounds. I calculated the remaining reserves to those different abandonment pressures, both on the basis of a 100% recovery and on the basis of a 90% recovery of the gas in place. In my judgment the use of even a 90% recovery factor is very liberal, and there is a greater probability that the actual recovery in a field of the type of the Panhandle field will be less than 90% than that the recovery will be in excess thereof. The Panhandle Field is affected by many conditions which will militate against as great a percentage of recovery of gas as would be the case with a field not having those conditions. Some of the conditions are the effect of the oil producing section of the field, the varying differences in depth of pay, the varying differences in porosity and permeability, the irregular pattern under which wells have been drilled, the irregularity in production taken from the different wells, the irregularities found in the accumulations of gas in the reservoir, and the damage to some of the producing formations resulting from the infiltration of water to the upper sands, caused by improper drilling and production practices. Even the size of the field will affect ultimate recovery because of the distance some of the gas will have to move in order to reach an outlet.

[fol. 10980] Schedule 3 Exhibit 30:

I have indicated on Schedule 3 of Exhibit 30 the results of the calculations just referred to, showing the amount of gas now in place in Panhandle Eastern's acreage and in that covered by its gas purchase contracts, as of July 1, 1941, at the varying abandonment pressures referred to. In Column B of that Schedule, I have shown the original amounts of gas in place for the different classes. In Columns C, E, G, and I, appear the amounts against which

the 90% recovery factor should be applied at the respective pressure abandonment figures used, and in Columns D, F, H, and J, I show the amounts now recoverable from said reserves at the abandonment pressures shown, after applying a 90% recovery factor and after deducting the gas known to have been withdrawn from the reserves in question.

Page 1 of said Schedule 3 shows the results obtained at abandonment pressures of 150 pounds, 125 pounds, 100 pounds and 75 pounds.

Page 2 of Schedule 3 shows the results obtained at abandonment pressures of 50 pounds, 30 pounds, 25 pounds and 0 pounds.

In reaching my estimate of the present reserves of Panhandle Eastern, I have deducted the metered production from this acreage, shown in Column C of Schedule 2 of Exhibit 30 to have been 176,909,587,000 cubic feet, and have estimated the unmetered production from the wells heretofore drilled on said acreage.

Schedule 4 Exhibit 30:

Schedule 4 of Exhibit 30 is a tabulation showing my estimate of unmetered gas. I estimate that the unmetered gas, so far as it has been used for drilling wells, conditioning wells and testing wells has been 46,583,875,000 cubic feet. There had also been production from the 22 wells belonging to Huber Petroleum Company prior to the time Panhandle Eastern entered into a gas purchase contract with that company. I have used as production [fol. 10981] from the Huber wells prior to that date a production of 33,876,021,000 cubic feet taken from the best available information. Therefore, in preparing Pages 1 and 2 of Schedule 3, I have deducted from the original content, known and estimated production to date in the aggregate of 256,472,325,000,000 cubic feet. A few other wells now connected to Panhandle Eastern's system had also produced small quantities of gas prior to such connection which production I have not deemed of sufficient amount to make any appreciable difference in the total.

The computation shown on Pages 1 and 2 of Schedule 3 does not take into consideration any underground drainage from the Panhandle Eastern reserves to the other portions of the field.

Panhandle Eastern's Reserves Are Above the Average:

My estimates of Panhandle Eastern's reserves are based on the average gas content of the various parts of the field in which they are located. I consider this a very conservative basis. A study of the potential producing capacities of the wells connected to Panhandle Eastern's line shows that their average potential production is far in excess of the average for the entire field and that this condition has existed for some time. Prior to the time the Shamrock Oil and Gas Company properties were connected to the line, the average producing capacities of the gas purchase wells were only approximately average potentials of the entire field, but when the 25 wells in Moore County belonging to Shamrock Oil and Gas Company were connected the average potential producing capacities of the gas purchase wells was raised to approximately that of Panhandle Eastern's own wells.

Explanation of Schedule 5 Exhibit 30:

Schedule 5 of Exhibit 30 reflects for the years 1935 to 1940, inclusive, the average potentials of the gas wells [fol. 10982] in the Panhandle Field as a whole, those in the West sweet gas field, those drilled on Panhandle Eastern's own properties and those drilled on acreage held under gas purchase contracts. This exhibit shows at the time of the last test (1940) the average potential of wells in the West sweet gas field was 16,019, the average potential of gas wells in the entire field was 16,294, the average of wells belonging to Panhandle Eastern Pipe Line Company was 25,025, the average of wells under gas purchase contract was 25,651. The average of all wells connected to Panhandle Eastern Pipe Line Company was 25,332, more than 50% above the average for the Panhandle Field as a whole or the average for the West sweet field. This difference in potential producing capacity reflects a very substantial difference in porosity, sand thickness, or both.

Tyes of Additional Data Presented:

I have assembled from the company records certain statistical data relating to the gas acreage owned and under gas purchase contract and the production from both the Panhandle and Hugoton fields. This data is set out in the schedules which now will be discussed.

Gas Acreage:

Schedule 6 of Exhibit 30 is a correct statement of the acreage owned by Panhandle Eastern Pipe Line Company and that held by it under gas purchase contracts. The schedule segregates the tracts, drilled and undrilled, and also segregates the tracts in which the company owns an entire interest from those in which it owns only a 50% interest. The schedule is self-explanatory.

Argus Production:

As shown on Schedule 6 of Exhibit 30, Panhandle Eastern owns certain acreage from which it supplies gas to Argus Natural Gas Company. On Schedule 7, I show the leases from which this production is delivered to Argus Natural Gas Company, the rock pressures and potentials as of July, 1940, the production for the month of [fol. 10953] June, 1941, and the cumulative production to June 30, 1941.

Texas Production:

Schedule 8 of Exhibit 30 shows, separately, the production from both company owned wells and gas purchase wells located in the State of Texas. The production from the company's owned wells is segregated as to the leases from which the production is taken. The production from gas purchase wells is separated according to the metering station at which the purchased gas enters the pipe line. The Schedule shows the rock pressures and potentials as of July, 1940, the production for the fiscal month of June, 1941, and the cumulative production to June 22, 1941, for the company owned wells. It shows the 1940 pressures and potentials for the gas purchase wells and the production for the fiscal month of June, 1941, but the total production shown with respect to such gas purchase wells is only the cumulative production since such wells were connected to Panhandle Eastern's line. We

have no information with respect to any former production from those wells.

Hugoton Main Line Production:

Schedule 9 is a table showing the production of the wells in the Hugoton Field belonging to Panhandle Eastern Pipe Line Company or the wells in which it has an interest, and which are connected to its main line. It is prepared in the same manner as that part of Schedule 8, dealing with the production in Texas from wells belonging to Panhandle Eastern Pipe Line Company.

Hugoton Gas Purchase Production:

Schedule 10 of Exhibit 30 shows the production from the wells in the Hugoton Field which are connected to Panhandle Eastern Pipe Line Company's main line, showing the pressures of the wells and their potentials in July, 1940, the production for the fiscal month of June, 1941, [fol. 10984] and the cumulative production to June 22, 1941. This cumulative table does not include such production, if any, as was had from any of those wells prior to the time they were connected to Panhandle's line.

Analysis of Cumulative Production:

Schedule 11 of Exhibit 30 is an analysis of the production to the main line system from the Panhandle Eastern owned properties and the wells on which it holds gas purchase contracts, which are connected to the main line. The tabulation is as to districts and states, showing the total cumulative production to June 22, 1941. The lower section of said Schedule shows the apportionment or division of the production during the first six months of the fiscal year 1941.

Comparative Statement of Production and Purchases:

Schedule 12 is a comparative statement of production and purchases for the two year period ending June 22, 1941. Comparisons are made for each month and between districts. This tabulation also shows the volumes of production sold Argus Natural Gas Company during the two year period referred to.

Schedule 8

Page 1

Texas Production To Panhandle Eastern Pipe Line Company

Note 1. The number of acres shown represents only the number of acres in the particular lease used for proration purposes in connection with the well described. Many of the leases on which the wells are drilled have proven acreage in excess of that shown.

Note 2. The MCF volume shown hereon represents the potentials determined by back pressure tests.

[fol. 11010] Exhibit 36.

Written Testimony of Witness Glenn G. Bartle.

[fol. 11011] Statement of Qualifications and Experience of Glenn G. Bartle.

1. Name, address, and age.
Glenn G. Bartle, Kansas City, Missouri, age 42.

2. Present position:
Professor of Geology and Dean of Liberal Arts, University of Kansas City.

3. Education:
1921—A.B. in Geology, Indiana University.
1923—A.M. in Geology, Indiana University.
1924-25—Graduate Student, University of Chicago.
1932—Ph.D. in Geology (Stratigraphic and Economic) Indiana University.

4. Professional Experience:

(a) As Instructor:

1925 to 1933—Instructor in Geology, Junior College of Kansas City.

1933 to 1938—Chairman, Department of Geology, University of Kansas City.

1938 to Present—Professor of Geology and Dean of Liberal Arts, University of Kansas City.

(b) As Consultant:

1932 to Present—Consulting Geologist, Missouri Valley Oil and Gas Company, Independence, Missouri.

[fol. 11012] 1935 to Present—Consulting Geologist, Missouri Western Gas Company, Butler, Missouri.

1936 to 1938—Consulting Geologist, Phoenix Joint Stock Land Bank, Kansas City, Missouri.

Employed by Panhandle Eastern Pipe Line Company or affiliates as Consulting Geologist 1929 to 1933, 1935, 1936, and 1941.

Numerous other temporary geological projects.

5. Publications:

I am author of eleven geological publications, including four concerned with the geology of natural gas.

[fol. 11013] Written Testimony of Glenn G. Bartle.

Preliminary Statement:

I have been acquainted with the properties of Panhandle Eastern Pipe Line System since 1928. I did my first work for this System in June, 1929, as a Consulting Geologist, working at first in the gas fields near Kansas City at Paola, Kansas, and Blue Springs and Excelsior Springs, Missouri.

I first went to the Hugoton Field in 1931. Since that time I have been consulted frequently by the management of this Company and have represented them both in the field and in their own office. Also I have advised the field superintendents on the setting of pipe, the proper correlation on geological formations and related geological problems. I have estimated the reserves in various portions of the Hugoton Field for the management. I am the author of several scientific papers, including two dealing with the Hugoton Field, in which two papers I collaborated with Mr. Rufus Smith, the Company Geologist, using data, much of which came from the files of the Panhandle Eastern Pipe Line Company. In general, I have kept in constant contact with the operations of this Company and the producing conditions in the area of the Hugoton Field.

In the testimony which follows, I shall deal with geological and production conditions in the general area commonly known as the Hugoton Gas Field.

[fol. 11014] Description of Field:

The ultimate limits on the Hugoton Field are not as yet definitely known. I have indicated the probable boundaries on all sides, on the rock pressure and open flow maps, hereafter discussed, by a broken line. No dry hole has been drilled within this area. The field as indicated includes an area:

(a) In Kansas:
About 65 miles long North and South;
from 25 to 40 miles wide East and West.

(b) In Oklahoma:
About 35 miles long North and South and
from 30 to 40 miles wide East and West, and

(c) In Texas:
About 30 miles long North and South and
from 12 to 30 miles wide East and West.

This makes a total field, as shown on exhibits, about 130 miles long North and South and from 12 to 40 miles wide East and West.

The total area within the broken line is approximately 2,540,000 acres.

No oil in commercial quantities has been found. Within this area there are now approximately 278 producing gas wells connected to pipe lines and about 40 other wells which showed gas in their drilling records but which were drilled for oil or are remote from pipe lines and are not now connected.

[fol. 11015] The producing formations are composed of limestones and shales of the Big Blue Series of the Permian System, found at depths between 2400 and 2900 feet below the surface of the ground or at an elevation of 100 to 800 feet above sea level.

Discoveries of Gas:

Gas was found:

(a) near Liberal in Seward County, Kansas, in 1922;

(b) near Texhoma in Texas County, Oklahoma, in 1923;

(c) near Guymon in the same County in 1925;

(d) near Hugoton in Stevens County, Kansas, in 1927;

(e) near Santa Fe in Haskell County, Kansas, in 1931, and

(f) near Holcomb in Finney County, Kansas, in 1932.

These six areas were at first thought to be separate gas fields and were named for those nearby communities. These various areas are now recognized as being parts of a common pool known as the Hugoton Gas Field.

The development of the field has been slow, its growth dependent largely on the development of far distant markets. Small pipe lines were built

by the Argus Pipe Line Company to Dodge City, Kansas, in 1931;

by the Tri-County Gas Company to Scott City, Kansas, in 1937, and

by the Central Gas Utilities to Lamar, Colorado, in 1928.

The two chief markets, however, since 1932 are provided by the Northern Natural Gas Company, which transports gas to Omaha, Minneapolis and other communities principally in Iowa and Nebraska, and the Panhandle Eastern Pipe Line Company with its various mar- [fol. 11016] ket outlets in Kansas, Missouri, Illinois, Indiana, Ohio and Michigan.

Panhandle Eastern Activities:

Panhandle Eastern started buying leases in the Hugoton Field early in 1928. Over the period of the last 11½ years it has gradually built up its acreage reserve through leasehold and gas purchase contracts to that shown on the 1941 acreage map, Exhibit 20 hereafter referred to.

The first drilling in the Hugoton Field was on an individual farm basis with drilled tracts usually not larger than 160 acres per well. Convinced that economic development of the territory did not require the drilling of a well on such small tracts, the Company in 1932 inaugurated the policy of drilling itself and recommending under

prospective gas purchase contracts the drilling of not more than one well per section. This policy is still being followed. Through this more land-owners have shared in the royalty return and the economic development of the field will require the drilling of fewer wells.

Consolidations of leases to carry out this policy have been made by the Company and by other operators with whom it holds gas purchase contracts. While a few tracts have been dropped from the lease portfolio because of inability to perfect such agreements, the amount of acreage under control of the Company has consistently grown. The Company's acreage thus selected is recognized as favorably located. Very little acreage has been dropped because of poor prospects for gas.

[fol. 1017] At present this Company has under its control:

1. In Kansas:

(a) 19,170.95 acres, which it owns 100% leasehold interest and on which it has drilled wells;

(b) 71,096.40 acres which it owns 100% leasehold, but which is as yet undrilled;

(c) 17,320.00 acres which is 50% Company-owned and entirely covered by gas purchase contracts, and on which it has drilled wells, and

(d) 35,075.00 acres owned by other producers covered by gas purchase contracts for the life of commercial production.

2. In Oklahoma:

79,224.00 acres leasehold interest.

3. In Texas:

23,396.30 acres.

This makes a total controlled by this Company in the Hugoton Field of 245,282.65 acres.

Producing Wells:

Panhandle Eastern's main gathering system is now connected to 137 wells in the Kansas part of the Hugoton Field, of which 33 are 100% Company-owned; 34 are 50% Company-owned but entirely covered by gas purchase contracts and 70 owned by other producers are under gas purchase contract to Panhandle Eastern for the life of commercial production.

[fol. 11018] Discussion of Acreage Map:

On the 1941 acreage map, Exhibit 20, this acreage is shown in the following classifications:

(a) Those tracts marked in pink are 100% Company owned;

(b) those tracts marked in pink below and yellow above are 50% Company owned with gas purchase contracts covering the entire production;

(c) those tracts marked in green are under gas purchase contracts;

(d) those tracts owned in whole or in part by Panhandle Eastern but which are under contract to the Argus Pipe Line Company marked as follows:

(1) those in yellow below and pink above are 50% Company owned and 50% owned by others;

(2) those in green with a pink border are 100% Company owned.

Hugoton Structure:

Exhibit No. 32 shows the structural geological conditions in that part of the Hugoton Field located in the nine southwestern counties of Kansas and in Texas County, Oklahoma. I prepared this map with the assistance of Mr. Rufus M. Smith, Geologist with the Panhandle Eastern Pipe Line Company, early in 1939. It was published

in connection with an article entitled "The Hugoton Gas Field of Oklahoma and Kansas" written by us, which was printed in the Mines Magazine in August and September, 1940. This map shows accurately the structural conditions in this field as we knew them to exist in 1939 [fol. 11019] through a study of 322 wells. Drilling since that date confirms the accuracy of this study.

On this map contours are drawn on the top of the Herington limestone and all elevations are based on a sea level datum. The Herington limestone is the uppermost gas bearing formation in the Hugoton field and is readily identified by its lithologic characteristics so that it makes an ideal horizon marker for comparison of formations from one well to another.

As may be seen on this Exhibit, the Herington limestone is found at an elevation of over eleven hundred feet in a well in Western Morton County but it is only about three hundred feet above sea level near Liberal in Seward County or Sublette in Haskell County. The wells east of Hardesty in Texas County are still lower on the structure with the Herington found as low as 200 feet in elevation above sea level.

The structure shown by the contour lines on this map is a monocline dipping eastward at the rate of about 15 feet per mile. There are minor irregularities of this general eastward dip, as shown by the closure of the eight hundred foot contour line near Rolla, Kansas, and a slight nosing of the four hundred foot contour near Lawson, but these structural irregularities are unimportant in comparison with the definite general structure.

The structural contours on this map are quite different from those found over most oil and gas fields, where structural contours close around sharp anticlinal folds. It is quite evident that in the Hugoton field the entrapment of gas has not been caused by the folding of the formations.

[fol. 11020] Geologic Cross Section:

Exhibit No. 33 shows the cross section of the producing formations and the known formations below the same in

the Hugoton field. The formations above the Herington limestone are not shown. The top of the cross section is the top of the Herington limestone, not the surface of the ground.

The formations above the Herington in this area consist of highly colored shales and sandstones, and salt and gypsum beds which are interesting and important to a geologist but are not important in a consideration of the gas reserves. At the surface of the ground loose gravels and sands obliterate all other geological formations, leaving no outcropping ledges whatsoever. It is impossible therefore to determine the geological conditions by direct observation, except by correlation after careful study of the well cuttings.

The formations immediately below the Herington limestone consist of alternating limestones and shales also of the Big Blue Series of the Permian System. In their order below the Herington they are known as the Krider, the Winfield, the Towanda, the Fort Riley and the Florence limestones. They have been correlated from well to well using the names adopted by the United States Geological Survey and the Kansas Geological Survey for the outcropping formations of this age in south central Kansas. It is not claimed that these formations in the wells are exact time equivalents to those on the outcrop, near Wichita. It is my belief, however, that they are approximately equivalent to the outcropping formations and that [fol. 11021] they are accurately correlated with respect to each other, from well to well, which is the purpose of this study.

The cross sections therefore show a picture of a great slice through the producing formations of the Hugoton Field. The North-South Cross Section A-A' is taken from a point near Lakin in Kearney County, Kansas, to a point near Texhoma in Texas County, Oklahoma. It shows the actual record of the formations encountered in thirty-one wells. The West-East Cross Section B-B' is taken from a point in Western Morton County to a point in Central Seward County, Kansas. It shows the actual record of the formations encountered in eighteen wells.

The location of these two cross sections is shown on the Structure Contour Map—Exhibit 32.

The gas record of the wells on these cross sections is given whenever such record is available. Red dots indicate the spots where the drillers' log shows gas to have been encountered. At the base of the drawing of each drilled well a figure is given showing the thickness of the gas pay and the initial open flow of the well. The name and the location of each well is indicated just above the cross section.

In some cases only the first important gas was shown on the drillers' log and therefore only one red spot appears on the cross section. In many of these wells, however, other substantial volumes of gas were encountered at lower elevations. These are not shown because we do not have the record of the same.

Most wells have a showing of gas in the Herington limestone and an increase in the Krider and Winfield lime- [fol. 11022] stones. Many wells show important production in the Towanda, Fort Riley and Florence limestones but it is rare to find important gas below the Florence. It will be noticed that some increases of gas are to be found at the contact of the limestones and the intervening shales.

Some wells encounter salt water at horizons below the Florence and this deeper drilling of wells may make it necessary to plug back the hole to a point just below the lower-most important gas.

The presence of gas in this field is not due to an anticlinal fold but to conditions of porosity in various members of the Big Blue Series,—sometimes one, sometimes another. In general the formations west of the Hugoton Field are less porous and composed more often of substantially impervious shales and red beds, instead of limestones. Within the field itself there are variations in porosity, possibly due to the dissolving action of underground water in previous geological ages. The porous phases of the limestones at the point of contact with shales is indicative of this type of geological history.

It is improbable that the gas was formed from the limestones and pink shales which make up its present reservoir. Since dark bituminous shales are more probable sources of gas, most geologists believe that the gas originated in the Anadarko Basin of Oklahoma, toward the southeast, or the Dodge City Basin of Kansas, toward the northeast and migrated up dip into such formations as were porous in the Hugoton area. This migration of gas was stopped by the impervious formations at the same horizons towards the west.

[fol. 11023] The cross sections show the formations encountered in a few deep wells, there has been no effort to correlate these lower formations. Deeper drilling has not been successful in the Hugoton field.

Open Flow and Pay Thickness:

The "pay thickness" is not the whole amount of the formation shown on the cross section. It is an accumulation of relatively small amounts which are porous and actually contain gas as shown by the drillers' logs. This pay thickness is sometimes difficult to estimate by an experienced driller when there is a large quantity of gas in the hole as drilling is progressing. I have estimated this actual pay thickness by adding the total amounts of formations which cause increases in the open flow of the drilling well.

A curve has been constructed under my direct supervision showing the relation of gas pay thickness to initial open flow for wells in the Hugoton Gas Field. This curve is Exhibit No. 34. Prior to the preparation of this curve, a careful study was made of the logs of forty-five wells in the Hugoton Field. The wells selected are those in which the drillers' record was most carefully kept regardless of the ownership of the wells. Each of these forty-five wells has been spotted on the graph with the gas pay thickness shown as the vertical coordinate and the initial natural open flow volume as the horizontal coordinate.

It will be observed that these wells so plotted fall along a fairly constant curved line, demonstrating that a very close relationship exists between the initial open flow and [fol. 11024] the gas pay thickness.

I have also had prepared under my direct supervision a productivity chart showing the relation of gas pay thickness to initial natural open flow for representative wells in the Hugoton Field. This productivity chart, Exhibit No. 35, shows individual records of twenty-eight wells plotted with the gas pay thickness as the vertical coordinate and the initial natural open flow volume as the horizontal coordinate for each well. While some variations may be observed, yet when compared with variations on a similar chart of the Panhandle Field presented by Mr. Smith, a more general uniformity is observed in the Hugoton Field. This chart and graph make it clear that there is a more general uniformity in porosity and permeability in the Hugoton Field than in the Texas-Panhandle Field.

As heretofore stated, the production in the Hugoton Field comes only from limestones and limestone-shale contact formations. There is no granite wash or other highly variable formation in the Hugoton Field.

Reserve Pressure Reservoir:

The original pressure in the Hugoton Field varied from 432 to 440 pounds per square inch well-head pressure. We have used 435 pounds as an average pressure for this field. I have prepared a series of maps showing the decline of rock pressure in this area since 1932. I have used in all of these maps the present boundary line of the field as we now know it, not as it was known as of those previous dates. In the area which has not been drilled I am showing the pressure as above 430 pounds.

[fol. 11025] The upper portion of Exhibit No. 23 shows the rock pressure as known in the Hugoton Field in 1932. It is a part of the same exhibit used in the Texas-Panhandle Field and the same general coloring system has been used. Since it is possible to contour these pressure bands in Hugoton on a 10 pound differential, shades of the colors used on the Panhandle pressure maps have been used. In 1932 all of the Hugoton area was above 410 pounds, but as corresponding to the yellow color on the Panhandle map I have used one shade of yellow on the Hugoton map for the area above 430 pounds, an-

other for the area between 420 and 430 and still another for the area between 410 and 420.

It must be understood that these three shades of yellow taken together correspond to the yellow area shown on the Panhandle map and that the blue, green and gray colors of the lower pressure bands on the Panhandle map are not represented in any way on the Hugoton map since no such pressures then existed there.

An analysis of the gas pressure decline on the 1932 rock pressure map shows that there then was an area of 53,756 acres having pressures below 435 pounds. The average pressure of that area weighted with respect to group acreage was on July 1, 1932, 426.43 pounds per square inch well-head pressure.

Accumulated withdrawals of gas up to July 1, 1932, was 11,264,879,000 cubic feet of metered gas. The estimated amount of unmetered gas withdrawals up to July 1, 1932, is 4,038,198,000, making a total withdrawal from the Hugoton Field to that date of 15,303,077,000 cubic of gas. This indicates a withdrawal per pound decline in pressure of 1,785,657,000 cubic feet of gas, and a total initial reserve in the area of withdrawal of 77,760,795,000 [fol. 11026] cubic feet. It further indicates that the wells were withdrawing gas as if they were producing from a calculated initial reserve per acre of 14,450,000 cubic feet.

1938 Pressure Map:

The rock pressure map of the Hugoton Field for 1938 is shown on the upper portion of Exhibit No. 24. The pressures shown thereon are those existing at the expiration of six years from the date used for Exhibit No. 23. By that time pressures had declined to less than 400 pounds in eight small areas, which are shown in blue color. The areas between 400 and 410 pounds, between 410 pounds and 420 pounds, and between 420 and 430 pounds had extended materially beyond those shown on the 1932 map.

359,872 acres were in the region showing withdrawals.

The pressures in the areas of withdrawals when weighted as in 1932, averaged 417.68 pounds per square

inch. This made an average decline from virgin pressure of 17.32 pounds. The cumulative withdrawals by July 1, 1938, were 138,002,621,600 cubic feet of metered gas with an estimated withdrawal of 8,955,827,000 cubic feet of unmetered gas, making a total of 146,958,448,000 cubic feet of withdrawals during the period of the pressure decline of 17.32 pounds. This made an estimated yield per pound drop of 8,484,899,000 cubic feet for the withdrawn area and a total calculated initial reserve of 3,690,931,065,000 cubic feet for the area. The wells were behaving as if they were withdrawing gas from the initial reserve of 10,256,000 cubic feet per acre.

[fol. 11027] This calculated reserve is somewhat less than that calculated on the basis of the information available in 1932.

1939 Pressure Map:

The rock pressure map for the Hugoton Field for 1939 is shown on the upper portion of Exhibit No. 25. The map reflects withdrawals from a wider area than that shown on Exhibit 24. Two new low pressure areas below 390 pounds are shown on this map and they are indicated by a different shade of blue. Pressures were also further reduced generally throughout the area of withdrawal below those shown on the 1938 map.

Based on the pressures existing in July, 1939, the average pressure weighted with respect to acreage as for former years was 418.27 pounds per square inch. This was in fact slightly higher than the average pressures existing in the areas of withdrawal used in preparing the map of 1938. This was due to the circumstance that as a result of additional development the area of withdrawal was extended during the twelve month period.

The cumulative withdrawals as of July 1, 1939, were 170,040,132,000 cubic feet of metered gas and 9,504,022,000 cubic feet of unmetered gas, making a total withdrawal of 179,544,154,000 cubic feet. The tests of July 1, 1939, showed that pressures had declined an average of 16.73 pounds. There was therefore a production of 10,731,868,000 cubic feet per pound decline in pressure, representing a total calculated initial reserve of 4,668,362,-

580,000 cubic feet and a calculated initial reserve per acre of 10,241,000 cubic feet for the areas of withdrawal.

[fol. 11028] 1940 Pressure Map:

The 1940 pressure map of the Hugoton Field is shown on the upper portion of Exhibit 26. The blue areas are shown to be increasing in size and number and the pressures in the other producing portions of the field are shown to be further declining. The average pressure in the areas of withdrawal, weighted as for the previous years, was 416.32 pounds. This represented a pressure decline of 18.68 pounds. During the period of decline in pressure there was a cumulative withdrawal of 206,936,262,000 cubic feet of metered gas and an estimated withdrawal of 10,263,154,000 cubic feet of unmetered gas, making a total withdrawal of 217,199,416,000 cubic feet. This represents an estimated production per pound drop in pressure of 11,627,378,000 cubic feet and a total calculated initial reserve of 5,057,909,430,000 cubic feet for the area of withdrawal. The wells were behaving as if they were withdrawing gas from the initial reserve of 9,568,000 cubic feet per acre.

1941 Pressure Map:

The 1941 pressure map of the Hugoton Field is shown on the upper portion of Exhibit 27. The blue area has been enlarged from that shown on the 1940 map. (there being now four shades of blue). Pressures in other producing areas have likewise further declined.

The average pressure (weighted as in the other years) was on July 1, 1941, 410.53 pounds. The cumulative withdrawals of metered gas were 244,841,333,000 cubic feet and the unmetered gas 10,909,355,000 cubic feet, making [fol. 11029] a total withdrawal of 255,750,688,000 cubic feet.

This indicates a withdrawal per pound decline in pressure of 10,451,601,000 cubic feet, a total calculated reserve in the area of withdrawal of 4,546,446,435,000 cubic feet, and a calculated reserve per acre in the area of withdrawal of 9,722,000 cubic feet.

Thus it appears that after a period of time the calculated per acre reserve is now more nearly stabilized as

a result of including in the computations a larger producing area and the use of cumulative withdrawals and cumulative average pressure declines over longer periods of time.

On Exhibit 36, Schedule 1, Pages 1, 2, and 3, I have shown the data forming the basis of calculated per acre reserves as indicated from the information available on July 1, 1932, 1938, 1939, 1940, and 1941, respectively.

Porosity and Sand Thickness:

I have calculated the reserves of the Hugoton Field using as a basis for that calculation my judgment as to the average sand thickness and average porosity of the producing formations in the field. In this computation I have used 40.4 feet as the average thickness of pay and 18.6% as the average porosity. The use of 40.4 as average thickness of pay is supported by the well logs to which I have had access. A careful check of those logs covering the wells in the field which contain good records of the producing formations, shows that the approximate average thickness of pay is 40.4 feet.

[fol. 11030] In studying the producing history of 183 wells in the field and their logs, I reached the conclusion that wells having the pay thickness found in the logs of those wells would produce as those wells had produced with an average porosity of approximately 18.6%.

The studies made by me since that determination have confirmed that view.

Using 18.6% as the porosity factor and 40.4 feet as the average pay thickness and 478 pounds as the initial reservoir pressure at the sand face, I arrived at the amount of gas in place under the areas of withdrawals in the Hugoton Field at 9,541,000 cubic feet per acre. Since the size and limits of the Hugoton Field have not been determined, I have made no estimate of the original content of the field.

Panhandle Eastern Reserves:

On Exhibit 36, Schedule 3, Page 1, I show my estimate of the original content in those portions of Panhandle Eastern's reserves in the Hugoton Field other

than the reserves on which Argus Natural Gas Company has first call. This content computed at 9,541,000 cubic feet per acre, was 2,340,241,763,000 cubic feet. The content has on said schedule been segregated as to States in which the acreage is located and according to ownership and gas purchase contracts.

Remaining Reserves:

On Exhibit 36, Schedule 3, Pages 2 and 3, I show my estimate of the gas remaining in the reserves of Panhandle Eastern Pipe Line Company (other than the acreage on which Argus Natural Gas Company has first call) [fol. 11031] as of July 1, 1941. The information shown on that page is self-explanatory. Due account has been taken of all prior production, metered and unmetered, and calculations have been made at abandonment pressures of 150 pounds, 125 pounds, 100 pounds, 75 pounds, 50 pounds, 30 pounds, 25 pounds, and 0 pounds, respectively, and on Pages 2 and 3 of Exhibit 2 the gas remaining at each of these pressures is shown on the basis of both a 100% recovery and on the application of a 90% recovery factor.

Unmetered Gas:

Exhibit 36, Schedule 2, is an estimate of the unmetered gas which has been produced from the wells connected to Panhandle Eastern's pipe line. It does not show the unmetered gas produced from Panhandle Eastern's lines which are connected to the pipe line of Argus Natural Gas Company.

Exhibit 36, Schedule 4, Page 1, is my estimate of the unmetered gas which has been produced from Panhandle Eastern's lines which are connected to Argus National Gas Company.

Content of Argus Acreage:

On Exhibit 36, Schedule 4, Page 2, is my estimate of the original content of the acreage constituting reserves of Panhandle Eastern from which gas is furnished to Argus Natural Gas Company. This original content is estimated at 102,545,809,000 cubic feet on the basis of 9,541,000 cubic feet per acre.

Remaining Content Argus Acreage:

Exhibit 36, Schedule 4, Pages 3 and 4, is my estimate of the gas remaining on July 1, 1941, in the acreage con-
[fol. 11032] stituting the reserves of Panhandle Eastern Pipe Line Company for which gas is furnished to Argus Natural Gas Company, computed at abandonment pressures of 150 pounds, 125 pounds, 100 pounds, 75 pounds, 50 pounds, 30 pounds, 25 pounds, and 0 pounds, respectively. This tabulation shows the reserves remaining at those abandonment pressures both at a 100 percent recovery and on the application of a 90 percent recovery factor. It is my opinion that the estimated remaining gas content under the acreage constituting the reserves of Panhandle Eastern Pipe Line Company shown on Pages 2 and 3 of Schedule 3, and Pages 3 and 4 of Schedule 4, is reasonable as an estimate for the content at the respective pressures shown on those schedules.

[fol. 11033] Schedules Presented in Connection With The Testimony Of Glenn G. Bartle

Note:—No. 1

This tabulation does not include reserves from which gas purchased from Cimarron Utilities Company is delivered to Panhandle Eastern Pipe Line Company at a point near Baker, Oklahoma. Panhandle Eastern Pipe Line Company has little information with respect to those reserves.

No. 2

This tabulation does not include reserves of Panhandle Eastern Pipe Line Company [illegible] for delivery to Argus

[fol. 11047] (Exhibit 37.)

Introduction Market Value of Leases For Panhandle Eastern Pipe Line Company

My name is R. J. WALLACE. I reside in Dallas, Texas. I am Vice President of the Republic Natural Gas Company in charge of land and leaseholds and also in charge of gas production for the Hugoton District in Kansas. I was elected Vice President on October 1, 1940. Prior to October 1940, I have been operating independently as a producer of oil and gas and for many years past have conducted a brokerage business for the purchase and sale of oil and gas properties and leases in many parts of the Mid-Continent area.

In 1907, I went to work in the Osage reservation oil fields for the Lahoma Oil and Gas Company as a roustabout and night pumper.

In 1908 and 1909, I was employed by the Prairie Oil and Gas Company in their civil engineering department on tank construction and pipe line construction.

In 1909 until 1911, I attended college in winters and in summers worked at surveying, general oil field work and as a tool dresser on drilling wells.

In 1912, I was elected Register of Deeds for Washington County, Oklahoma, the county seat being Bartlesville. This county, at that time was one of the most active in oil and gas development and by far the largest percentage of instruments recorded consisted of all types of oil and gas leases, stipulations and contracts for leases.

In October 1913, I resigned as Register of Deeds and ac-
[fol. 11048] cepted the position of assistant superintendent of land and leaseholds of the Quapaw Gas Company and Associated Companies. This was the first large gas company operated at that time from northern Oklahoma. Later, these companies became the Empire Companies. My work consisted of acquiring and supervising the taking and purchase of oil and gas leases direct from landowners and brokers. As the company expanded, we acquired leaseholds in the States of Alabama, Mississippi, Arkansas, Louisiana, Texas, Oklahoma, Kansas, Colorado, Wyoming and Montana under my supervision.

In 1915 and until the latter part of 1919, I was attached to the production department of the gas division of the Empire Companies, and during that period was made superintendent of gas pipe lines in the Cushing Field, Oklahoma. At that time, this was the largest gas reserve in Oklahoma. In addition to this work, I purchased oil and gas production and acquired gas leases for the gas division.

In 1919 and through 1920, I was made manager of oil and gas operations in Louisiana for the joint account of the Empire Companies, the Barnsdall Oil Company and the H. V. Foster interests. My work consisted of the supervision of drilling wells and purchasing leases and selling leases to help finance the ventures. During the operations in Louisiana, the Empire Companies withdrew from the joint venture, leaving me with the Barnsdall and Foster interests, and in January 1921, I was transferred to Billings, Montana, as manager of oil and gas operations in the Rocky Mountain states. They formed a corpora- [fol. 11049] tion named the Barnsdall-Foster Company and I was general manager of that company until the latter part of the year of 1924. I sold a 60% interest in the properties of Barnsdall-Foster Company to the Midwest Refining Company and they took over the operations and management of the properties.

The latter part of 1924, I resigned from the Barnsdall-Foster Company and organized a corporation named the Record Petroleum Company, in which I owned a substantial interest. This company operated in Montana as a leasing company, drilled wells on its own account and as drilling contractors. We sold an interest in a portion of the properties of the Record Petroleum Company to the Midwest Refining Company.

In 1926 and until 1928, I secured oil and gas leases and oil and gas permits on the Federal and State lands in the states of Montana, Wyoming and New Mexico for my own account. Also, during this period, the Texas Panhandle Field became quite active and I made several trips into that field, known as the Amarillo District, to acquaint myself with this activity and the value of leases.

In 1928, I disposed of a portion of my interests in the Rocky Mountain states and moved to Tulsa, Oklahoma, to

engage more actively in the brokerage business and in valuation and appraisal of oil and gas leases and oil and gas producing properties.

During the year 1929, I devoted practically the entire year to consummating two transactions. One was the sale of one-half interest in all of the undeveloped oil and gas leases, being approximately 492,000 acres in Oklahoma and Kansas, owned by Amarada Petroleum Company to [fol. 11050] the Dixie Oil Company. The consideration for this one-half interest was $10,000,000.00. Also, I effected the merger of the McMann Oil Company to the Dixie Oil Company. This was a stock merger and the value set up at that time was approximately $12,000,000.00.

In 1930 to 1932, I conducted a general brokerage business and also developed a new gas field on the eastern edge of Kansas City, Missouri. I drilled a number of gas wells and constructed a pipe line system and sold the gas to the American Pipe Line Company.

In 1932 to 1935, I sold the gas properties near Kansas City, Missouri, and in addition to my brokerage business I was elected Vice President and General Manager of the Signal Oil Company and the Foster Oil Company, representing a bank. These companies were producing oil and gas in Kansas and Oklahoma and, as they had become indebted to the bank, it was necessary that they put the management under their direction.

In 1936, after drilling some additional wells and the farming out of leases of these companies on which wells were drilled that proved acreage retained, I sold the production and some of the undeveloped leases for enough to pay the bank's indebtedness, and then turned the companies back to their owners.

In 1936 and to 1938, I drilled a number of oil and gas wells in the Burton Field, Kansas, in which I owned a one-fourth interest. These wells were combination oil and gas wells and resulted in our building a casinghead gasoline plant on the property. The latter part of 1938, I sold my interest in the oil and gas properties and have retained the interest in the gasoline plant.

[fol. 11051] From 1938 until October 1, 1940, I was engaged entirely in the brokerage business and in valuation of oil and gas properties and leases.

During the years I was employed by various companies and operating independently as a broker, I have had occasion to acquire leases in the Texas Panhandle Gas Field and also in the Hugoton Gas Field in Kansas and Oklahoma. I first became acquainted with the Texas Panhandle Field during the early discovery of that field, and many thousands of acres of leases in the Texas Panhandle Field and in areas generally surrounding that field were acquired.

I have been requested to make a report setting forth the present market value of leases owned by the Panhandle Eastern Pipe Line Company, the same being located in the counties of Moore, Potter, Hutchinson and Carson of the Texas Panhandle Field, and in the counties of Sherman and Hansford, Texas, in an area lying between the generally accepted proven area of the Hugoton Field and the Texas Panhandle Field. Also, I have been requested to make a report setting out the market value of leases owned by the Panhandle Eastern Pipe Line Company in what is known as the Hugoton Gas Field located in the counties of Stevens, Morton and Grant, Kansas, and the Texas County, Oklahoma portion of the proven area of the Hugoton Gas Field.

It was necessary, in the preparation for this valuation of leases, for the writer to spend many weeks in the office of the company in Kansas City, Missouri, and in the field. The status of each lease, the consolidations of leases, the development requirements of each lease and the relationship to other leases, the subjection to outside drainage, [fol. 11052] the large amount of acreage held under one leasehold, the location as to the particular gas productive areas as indicated by wells drilled within those areas, the rock pressures, and the location of the acreage within the generally accepted proven sweet gas area have been some of the factors considered in arriving at the market value of these leases.

A very important factor shown in the leaseholdings, which is favorable to their value, is the result of a process of elimination and state of evolution the leases have gone

through, and the favorable contracts and consolidations whereby the construction costs or drilling costs have been reduced to a minimum.

The Texas Panhandle Field is recognized to be a proven gas field within a boundary line generally accepted. The field contains what is known as the sweet gas area and what is known as the sour gas area. The boundary line of the entire field is as follows:

Beginning near the Southeast corner of Hartley County, Texas, running in a Northwest circular direction to a point about 10 miles North of the Southwest corner of Moore County; thence running in a Northeasterly direction to a point near the Northeast corner of Moore County in Section 37, H. & G. N. R. R. Company Survey; thence in a general Southeasterly direction through Hutchinson County to a point near the Southeast corner of Hutchinson County; thence in a general Southeasterly direction through Carson, Gray and Wheeler Counties to a point [fol. 11053] about 8 miles East of the Town of Shamrock, Wheeler County, Texas; thence South and then running Northwest about 3 miles South of the Town of Shamrock, through Wheeler, Gray and Carson Counties to a point about 7 miles South of the Northeast corner of Potter County; thence in an irregular West, South and Southwest direction to a point near the center of Section 25, Block 5, of Gunter and Munson Survey where it follows what is assumed to be a fault in a Northwesterly direction through Potter County and a small portion of the Northeast corner of Oldham County and into Hartley County to the place of beginning.

The present defined limits contain approximately 1,450,000 acres of oil and gas lands. There is a generally accepted boundary within the proven area of approximately 1,000,000 acres of sweet gas lands, the balance being oil producing lands along the Northern boundary of said field and the sour gas lands located within the oil area, and also in the north and western part of the proven gas area in Hutchinson, Moore and Hartley Counties, Texas.

The leases of the Panhandle Eastern Pipe Line Company in the Panhandle Field, as valued in this report, fall

within the sweet gas area, with the exception of the leases in Sherman and Hansford Counties, Texas, which lie to the north of the proven field and are not yet fully proven for gas production but fall within a trend that has become very active in acquiring leases, for the reason that it is believed by many that this area will also be productive if the Hugoton Field and the Texas Panhandle Fields are found to be connected.

[fol. 11054] The Texas Panhandle Gas Field has passed through periods of great wastage of gas. Conservation legislation by the State of Texas and the serious efforts of the Texas Railroad Commission to enforce the legislation prohibiting waste has now resulted in substantially reducing the waste of gas blown to the air. At this time, less than 50,000,000 cubic feet of gas per day is being wasted, whereas, during the years of stripping gas for its gasoline content, it was estimated that in excess of 1,000,000,000 cubic feet per day was being blown to the air. The leases of Panhandle Eastern Pipe Line Company, however, were generally not within the area where stripping took place and, consequently did not suffer the immediate loss of rock pressure and open flow suffered by some other parts of the field.

From the beginning of active development of the oil pools in the Texas Panhandle Field in the year 1926, there was an excessive waste of gas. In the early days, of course, there was not an appreciable market for gas for light and fuel. Consequently, the gas at that time was of little or no value. Likewise, the market value of leases was very low. It was what was termed a "wild cat" area and the producing extent or boundaries of the field had not been determined.

Beginning about 1927, when some of the major gas transmission lines were being planned, the market value of leases in the gas area increased very rapidly. In the purchases of large amounts of acreage, prices were paid in excess of those paid for smaller individual tracts for the reason that the leases on the large tracts and well blocked leases were more attractive to the operators who had provided themselves with a market outlet. These original values paid were in the form of cash per acre, as [fol. 11055] well as certain definite obligations to drill and

develop many wells and to build pipe lines which constituted the major consideration for many leases.

In 1933, the Texas Legislature enacted a statute, commonly known as the "Stripping" law, under the operation of which the owners of gas wells were permitted to extract the gasoline content therefrom and blow the residue to the air. This had the effect of lowering the value of the leases for the reason that by 1934 it was estimated that in excess of 1,000,000,000 cubic feet of gas per day was being blown to the air. A large percentage of this gas was from the sweet gas area and from tracts adjacent to leases held by the gas pipe line companies.

In 1935, the Texas Legislature repealed the stripping law by the passage of House Bill No. 266, which prohibited the blowing into the air of any gas other than that gas which was produced with oil. Later, Senate Bill No. 407 was passed, authorizing the use of sour gas for the manufacture of gasoline, provided the residue was consumed in the manufacture of carbon black.

In studying the withdrawals over the past few years, although the increased use for carbon black has offset to a considerable extent the decrease in waste of gas to the air, present withdrawals of gas for carbon black manufacture are limited to sour gas and casinghead gas. This gas is produced in the sour gas area and in the oil producing area along the north boundary of the field.

Conservation legislation, as administered by the Texas Railroad Commission, has materially increased the mar- [fol. 11056] ket value of leases within the sweet gas area. Legislative and Railroad Commission policy has undoubtedly resulted in the creation of higher values, for the reason that a purchaser will now feel more confident of recovering a greater proportion of the gas underlying the land than would have been possible under former conditions.

In placing the Texas leases of the Panhandle Eastern Pipe Line Company in several classifications, consideration has been given the proximity to wells of certain open flows and rock pressures, the producing history of the wells and the locations of the leases with respect to the leaseholds of other companies with gas pipe lines. Con-

sideration also is given to the unusually favorable leases and the favorable contracts effecting a consolidation of leases. These factors, as well as others, were used in determining the value and classifications adopted herein.

With respect to consolidations of leases, special recognition must be given to the advantage of owning leases under this form of contract as compared to the value of separate and individual leases for the reason that under the consolidation contract the lessee is relieved from the uneconomic drilling of additional wells not necessary in order to obtain the gas, which additional wells might be required under the terms of each individual lease or be required by the implied covenants requiring development that have been read into the leases by our courts.

When a gas field is discovered or when it is suspected a gas field might exist in a certain area, many operators and brokers rush into that area and secure leases from the landowners. Ordinarily, each lease requires the drilling of a well or wells upon the lease or a payment of delay [fol. 11057] rentals which defers the drilling of the first well for a period of a year and during the primary term of said lease. An obligation is read into the lease by implication requiring lessee to protect the property against drainage, and to adequately develop the property. Therefore, in the absence of consolidations, if one company secures many separate leases it is faced with the obligation of drilling a well or wells on each separate lease or the payment of large sums of money as delay rentals, in order to hold or perpetuate the leased reserve. Consolidation of leases eliminates this large expenditure for drilling and delay rentals to a certain extent, and, therefore, adds substantial value to the leaseholds. It also permits the withdrawals to be made on a more equitable basis and thereby assures the landowner a more equitable return from the wells and, ultimately, a larger recovery and income from the field.

Many of the Panhandle Eastern leases have been consolidated. In other words, the leases have lost their original identity and the rights of the parties are determined by the provisions of the consolidation agreement, rather than by the provisions of the original leases.

It was necessary, in evaluating the leases of the Panhandle Eastern Pipe Line Company, to prepare the exhibit attached hereto which was prepared by me and entirely under my direction.

I have made a take-off of each separate lease. On it I have shown the date of the lease, the number of the lease, corresponding to the records of the Panhandle Eastern Pipe Line Company, the lessors' names and the name of the present owner. The county and state is shown; also a description of the lands covered by the lease, the number [fol. 11058] of acres, the royalty to be paid to the landowner and the terms and amount of delay rentals. In the event the lease has been consolidated with other leases, I have shown the lease numbers corresponding to those consolidated.

As to the drilled leases, I have shown the number of each well, the date completed, the original open flow, and the original rock pressure. Under "current gauge", I have shown the number of each well and the latest open flow test and rock pressure test, and the amount of gas (in MCF's) marketed from each well, as obtained from the records of the Panhandle Eastern Pipe Line Company.

I have reviewed each lease separately, and on the take-off sheets have made notations as to the productive area and pressure area in which the lands are located. This information I have acquired from being in the field and from the records and maps of the Panhandle Eastern Pipe Line Company and records which I have accumulated over a period of several years. I have placed each lease in a certain classification, or classifications, and have so noted on each sheet, and the value of each classification as that which, in my opinion, represents the present market value of leases from a willing seller to a willing buyer.

I have shown in this exhibit a summary or recapitulation of the total acreage in each classification and the total market value of leases in each classification and their totals.

I have included with those leases that have been consolidated, a brief of the consolidation contract.

[fol. 11059] The Oklahoma and Kansas leases owned by Panhandle Eastern Pipe Line Company were given the

same character of study as were its Texas leases, taking into account the different conditions existing.

The Hugoton Gas Field is located in the States of Kansas, Oklahoma, and possibly extends into Texas. It is an area which has not yet been completely defined, but from the gas wells now drilled, it has been proven the largest gas reserve, in total acres, discovered.

The Kansas portion of the Hugoton Gas Field consists of gas producing portions of Kearney, Finney, Grant, Haskell, Morton, Stevens, and Seward Counties; also, approximately the east two-thirds portion of Texas County, Oklahoma is included within the field. It is believed by many that portions of the Counties of Sherman and Hansford, Texas are part of the same field, however, the limits and extent of that field have not as yet been defined and determined.

The Hugoton Field is an enormous reservoir of natural gas, generally accepted as containing proven gas bearing acreage as follows:

Kansas	1,727,360 acres
Oklahoma	939,200 "
Texas	705,280 "
Total	3,371,840 "

The discovery well in the Hugoton Field was the Crawford No. 1, drilled by W. L. Sidwell of Winfield, Kansas, and located in Township 33, Range 37, Stevens County, Kansas. The original early development of the Hugoton Field was carried on by Mr. W. L. Sidwell and Mr. W. M. McKnab. At the time of this early development, there were no pipe lines in this area and the nearest production of natural gas was from what is now known as the Texas Panhandle Field, approximately one hundred miles to the [fol. 11060] south.

During the years 1927 to 1930, inclusive, about 88 gas wells were drilled in the field and the only gas produced therefrom was used to serve local markets. Since that time, many additional gas wells have been drilled and, although the limits of the field are not yet defined, it is generally accepted as covering an area from North to South at least 105 miles to or beyond the Texas State Line and 40 miles from East to West at the widest part.

The gas produced in the Hugoton Field is encountered at an average depth of from 2700 to 2800 feet. The producing horizons are lime bodies, separated by impervious shale beds. The thickness of the gas producing formations or pays varies from three to six streaks of porous lime and will range from 17 feet to 135 feet in aggregate thickness. Gas producing zones vary greatly over short distances. It is a field that is generally described as having low permeability and wells drilled within one mile of each other do not materially affect one another by pressure or delivery rates.

In studying the original open flow of the wells drilled, we find that there is a very definite trend from Northeast to Southwest and which generally conforms to the trend or boundaries of the field.

The Kansas and Oklahoma portions of the field are divided into many small tracts, usually 160 acre tracts. This is due to the fact that the lands were acquired by homesteading by the landowners from the Public Domain lands of the Government. Therefore, it has developed that the oil and gas leases acquired by the gas companies are mostly on 160 acre tracts. There are very few leases owned by [fol. 11061] one company that can be termed blocked leases. However, due to the peculiar condition in the Hugoton Field, it is generally accepted that blocking is not as necessary as in the Texas Panhandle Field because, being of low permeability, underground drainage is not so great and the movement of gas is very slow.

There has been a very definite policy of development established by the producers and also the state Corporation Commissions that a unit for drilling shall be one well to 640 acres. This has, therefore, required that the producers communitize separate leases under one lease or unit agreement, whereby one well perpetuates the leases under such agreement.

This is a factor of value because the producer is relieved from drilling as many as three additional wells to hold the separate leases perpetually, and has reduced to a minimum the construction or drilling costs. These leases have, therefore, lost their original identity.

Most leases of the Panhandle Eastern Pipe Line Company in Kansas and Oklahoma, valued in this report, are situated within the proven gas area of the Hugoton Field and the remaining leases are favorably located according to indicated trends.

Due to their locations, most of them fall within certain areas of estimated productivity, based on a study of the wells now drilled and their original open flows. This has made it necessary that they be divided into several classifications as indicated by these areas. Consideration has been given the proximity of wells of certain open flow, the past producing history of the wells, and the location of [fol. 11062] Panhandle Eastern leases to those wells. The consolidations of the leases were given special consideration, based on favorable terms of the consolidations.

The summary or recapitulation attached to my exhibit shows a total acreage in each classification and the market value of leases in the various classifications with respect to the Hugoton acreage, as well as the Panhandle acreage.

In valuing the leases of Panhandle Eastern Pipe Line Company, I have not considered as a value factor the fact that the wells drilled thereon are connected to pipe lines; nor have I attempted to place a value upon the wells or equipment used in connection therewith. The values shown in the tabulations reflect merely the present market value of the leases, according to my judgment. It is my opinion that if this acreage reserve owned by the Panhandle Eastern Pipe Line Company in the two fields was available, it could unquestionably secure an outlet for its gas, exclusive of any pipe line now in the fields and could be sold at the valuation fixed by me.

It is my judgment that the leases would have no value from a standpoint of the oil rights covered thereby and I have placed on said leases no valuation, based on the circumstance that some or all of such leases authorize the lessee to produce oil.

Dated this August 25th, 1941.

R. J. WALLACE.

[fol. 11064]

. 13153]
ril 1930 to
y 1930

Was employed by Ford, Bacon and Davis in the construction of an oil pipe line from Glen Pool, Oklahoma, to Wood River, Illinois.

y 1930 to
e 1931

Was employed as Chief Field Engineer for Ajax Pipe Line Company, principally in further construction of the line which had been started by Ford, Bacon and Davis.

e 1931 to
e

Employed by Panhandle Eastern Pipe Line Company, except for a period of about twenty months in 1936 and 1937. During that time, I was working for myself on projects relating to sound control and general construction. During the period of my service with Panhandle Eastern Pipe Line Company, I have kept in touch with various features of the Company's business, including its construction activities and its production activities. Commencing in October 1937 and continuing to date, my official title has been Production Engineer. As such, the drilling of wells, the reconditioning of wells, the testing of wells, and other problems related to production have been under my general jurisdiction.
It has also been one of my duties to

. 13154]

advise the management relative to additions to gathering facilities, including additional gathering lines

and increased power in the compressor stations, in order that such gas as is needed might be promptly gathered and delivered into the main line. When advising of the amounts of gas which will probably be required to satisfy the markets of Panhandle Eastern, it has been one of my duties to recommend the drilling of such additional wells and the providing of such additional facilities and power in the gathering system as will result in the delivery of gas to satisfy peak day requirements.

[fol. 13155] Written Testimony Of C. H. Hinton.

Subject Matter Of Testimony:

Under direction of the management, I have made a careful study of the future capital expenditures which will probably be incurred by Panhandle Eastern Pipe Line Company in its production and gathering activities West and South of Liberal, Kansas. This study has also included a consideration of the increased operating expenses which necessarily will result from the circumstance that as the properties become older, the pressures lowered, and the reserves further depleted, the unit costs for producing and gathering the gas will be substantially higher than those heretofore existing.

This study has also included a determination of the amount of gas which the Company will probably be able to take from its reserves (both owned and held by gas purchase contracts) in the Panhandle Field within the present indicated economic life of those reserves and in making the study, I have considered (a) present market requirements, and (b) anticipated increases in such requirements.

In my references hereafter made to the Hugoton Field, I include all those portions of Kansas, Oklahoma and Texas which lie within the Hugoton Field, as outlined in Exhibit 26 and other maps presented in connection with the testimony of Messrs. Burnham, Bartie, and Smith.

[fol. 13151] Exhibit 42.

Written Testimony of
Witness C. H. Hinton

[fol. 13152] Statement of Qualifications and Experience of C. H. Hinton

1. Name, address, and age.
C. H. Hinton, Kansas City, Missouri; age, 36.

2. Present position:
Production Engineer, Panhandle Eastern Pipe Line Company.

3. Education:
Attended University of Illinois from September 1924 to February 1928, taking courses in the School of Mechanical Engineering.

4. Business experience:

June 1924 to February 1928

During vacations and for part of the time while attending school, I worked in the office of supervising architect of the University of Illinois.

February 1928 to February 1929

Worked in the Acoustical Engineering Department of the Celotex Company, out of Chicago and Champaign, Illinois.

February 1929 to to April 1929

Was employed by Engineering Service Corporation, Houston, Texas.

April 1929 to April 1930

Was employed by Mississippi River Fuel Corporation as Division Engineer, working out of Pine Bluff, Arkansas, during a portion of the time and out of St. Louis, Missouri, the remainder of the time.

Principles Recognized:

In my investigation, I have recognized the following principles and assumptions:

1. Panhandle Eastern will, so long as economically advisable, continue to apportion its takes between the Panhandle Field and the Hugoton Field on approximately the present basis.

Panhandle Eastern now produces and transports for main line purposes gas from two fields—the Hugoton [fol. 13156] Field and the Panhandle Field. In apportioning its withdrawals between those fields, it takes into consideration the differences in conditions which exist in the two fields, with the hope that (a) it will by production eliminate the probability of drainage from its producing properties in the Hugoton Field, and (b) it will have been able, by the time it is forced to discontinue operations in the Panhandle Field, to produce an amount of gas substantially equivalent to its reserves in that field.

It is shown from Exhibit 30, Schedule 11, presented in connection with the testimony of Rufus M. Smith, that of the main line production to June 22, 1941, 68.75% was taken from the Panhandle Field. For the month of June 1941, the percentage was 65.85% and for the first six months of 1941 it was 72.74%. It is now estimated that the total requirements for 1941 will be 61 billion cubic feet on a 16.4# pressure base and that 45 billion cubic feet, or 73.77%, will be taken from the Panhandle Field. I, therefore, assume that until pressures and volumes decline to the point where it is not economical to do so, the Company will continue to take from its reserves in the Panhandle Field as great a percentage as can be taken without doing inequity to its producers and royalty owners in the Hugoton Field.

2. It will continue to apportion its production between its own leaseholds and its gas purchase contract acreage on the basis now existing.

While the present apportionment may be changed, it is clear that no fair method of apportioning withdrawals from the Panhandle reserves would result in a smaller

percentage being taken from the Company leaseholds than is taken under the present allocation of 50% to acreage and 50% to open flow potentials, with 640 acres as the [fol. 13157] minimum drilling unit. I have, therefore, assumed a continuance of that policy by this Company in the Panhandle Field.

3. Additional wells in Panhandle Eastern's reserves in the Panhandle Field will be drilled on only its own leaseholds.

Except for one location, no more wells are required for full development of the lands covered by the gas purchase contracts. There are, however, fifteen locations on the leaseholds in the Panhandle Field belonging to Panhandle Eastern Pipe Line Company, and I assume that these locations will be drilled. Therefore, as additional gas supplies are required from the Panhandle reserves to furnish additional market requirements or to maintain present loads under reduced pressures and potentials, such additional gas must be obtained from wells to be hereafter drilled by the Company on its own leaseholds in that field. The time for drilling these wells will be determined by the demands for additional gas and the obligations of existing lease contracts.

4. As volumes increase and as pressures decline, additional gathering facilities must be provided for.

This will, of course, not be denied. In some instances, the additional capacity will be furnished by field power or booster stations; in others by looping sections of the gathering lines; and in others by the addition of equipment to the regular compressor stations. In my estimates, I have anticipated the use of each of those methods.

5. As the Panhandle Field declines, the Company must look more and more to its reserves in the Hugoton Field.

Looking forward to the time when it will not be economi- [fol. 13158] cal to supply a very large percentage of its market requirements from its reserves in the Panhandle Field, the Company must be pursuing a policy of developing its reserves in the Hugoton Field so that adequate production will be at all times available to supply the

6027

market. The Panhandle Field will not be a "one-horse shay". It will not suddenly cease producing but, in my opinion, its decline in productivity will be at an ever increasing rate. The Company must maintain its reserves in the Hugoton Field and do such drilling as is necessary to keep its leases in force and construct such gathering lines as are necessary to serve the areas from which it expects to produce gas, providing such additional power and other facilities as may be required from time to time to handle the gas taken. These facilities must be prepared in advance of actual necessity therefor. Gathering lines of substantial sizes must be laid so that with additions by looping and the use of more power, the ultimate needs of the areas served will be provided for.

6. The Panhandle Field is a highly competitive one and one of varied producing characteristics.

This fact must be recognized in any attempt to estimate future conditions. A production engineer, charged with the duty of obtaining from his Company's reserves production of given volumes at given times, is faced with many major problems. Particularly is this true in the Panhandle Field. If the problem were merely a matter of dividing the amount of gas required each year into the estimated gas content of the reserves, the arithmetic involved would be simple.

This, if the reserves of Panhandle Eastern in the Panhandle Field were, as assumed by Mr. Toeppen, 750 billion [fol. 13159] cubic feet as of November 1, 1940, (this being the amount estimated by Mr. Davis in Toeppen's Exhibit 4) and if Panhandle Eastern's requirements from the Panhandle Field are 60 billion cubic feet annually, the supply would be exhausted in 12½ years from November 1, 1940, or on May 1, 1953. Or, on the basis of present requirements of 45 billion cubic feet annually, they would be exhausted in 16⅔ years from November 1, 1940, or on July 1, 1957.

Or, if its reserves were, on July 1, 1941, the 733 billion cubic feet at zero pounds, as estimated by Mr. Smith, and they could be produced to a 50 pound abandonment pressure with a 90% recovery factor, they would last 10½ years, or to November 1, 1951, on an average take of 60 bil-

lion annually; or they would last 13¼ years, or to November 1, 1954, on an average take of 45 billion annually. Even if the estimated content could be produced to zero pounds at 100% recovery factor, the reserves would be produced in 12¼ years with an annual outlet of 60 billion cubic feet, or 16⅓ years with the present annual outlet of 45 billion cubic feet.

But the problem facing the production engineer is not that simple a problem in arithmetic. The reserve of gas belonging to a company is not "boxed in" separate and distinct from the reserves belonging to other competitive interests producing gas from the same reservoir. He cannot withdraw his company's required gas from the stock on hand as the housewife would withdraw for a meal potatoes from her storehouse in the cellar. Withdrawals of gas must be provided for with recognition of the fact that other competitive producers are at the same time taking gas from the same reservoir. Those producing gas know that the production by others will lessen the ability of one producer to take his own gas, unless he produces concur- [fol. 13160] rently with other producers, and that the taking by all producers results in lowered pressures and increased unit production costs.

The operating problems of the production engineer are further complicated by the circumstance that the gas with which he is dealing is not a perfect gas. For this reason, Boyle's law does not exactly apply to field performance. Certain corrective factors must be taken into consideration in any attempt to apply that law. We also know that great differences exist in the field as to gas content and as to producing characteristics of the wells. We know the sand thickness, porosity, permeability and potentials vary widely. There are rich areas and poor areas (sometimes close together). Some production is from granite wash formations, some from dolomite formations, and some from apparently cavernous conditions. Some wells and nearby formations have been damaged by "salting" conditions, while other areas are, so far, not affected thereby. The effect on pressure conditions in the gas areas resulting from the production of oil from the same formations at lower elevations has not been determined. It is doubtful whether the true equilibrium pressure has

ever been ascertained at any date subsequent to the time production was first commenced.

These and many other elements make necessary an allowance for corrective factors in the Panhandle Field. So far as I know, no one has determined with accuracy just what allowances should be made.

That some such corrective factors must be used (in any [fol. 13161] attempt to apply Boyle's law to the Panhandle Field) becomes at once apparent when an attempt is made to determine the gas content in the field at virgin pressure, by a consideration of the production per pound loss in pressure. We find that when the production per pound drop is multiplied by the virgin pressure, we get indicated contents which will differ for each time period considered, and that if accurate figures are available with respect to drops in pressure and production during the periods of such drops, the production per pound drop becomes less and less as the years go by.

In the following table, production figures used have been taken from what I consider to be the most reliable sources and the pressure drops shown are those reflected in the reports of the Texas Railroad Commission.

Period	Production MCF	Pressure Loss (Pounds)	Production Per Pound Loss (MCF)	Indicated Virgin Content (Trillion)
Beginning to 8/1/35	5,197,693,413	67 49	77,014,270	33 166
8/1/35 to 7/1/36	556,485,654	7 51	74,099,288	31 862
7/1/36 to 7/1/37	552,281,402	7 95	69,544,830	29 904
7/1/37 to 8/1/38	622,925,161	9 39	66,339,208	28 525
8/1/38 to 8/1/40	1,152,418,747	19 35	59,556,524	24 609

Thus, it is clear that on the basis of the figures used, the [fol. 13162] indicated virgin content, calculated through the use of production per pound drop in pressure, becomes less and less as the years go by—that the production per pound loss in pressure becomes progressively less as pressures are lowered and that the indicated virgin content, as

calculated on the curve of declining production per pound loss in pressure, will be far less than the content calculated on the basis of average pressure drops in the past.

Disproportionate Production:

Another problem which faces the production engineer in the Panhandle Field is the disproportionate taking of gas—not only as between producers but also as between areas. Large pipe lines carry enormous volumes of gas from the Panhandle Field to Denver, Minneapolis, St. Paul, Omaha, Chicago, Kansas City, Detroit, and many other cities and communities located hundreds of miles from the field. In addition, smaller lines carry gas to various market points in Texas, Oklahoma and Kansas. For use of these pipe lines, 316 billion cubic feet of gas was produced during the year ended July 1, 1940, from an area containing 1,085,270 acres.

During that same period, sour gas for carbon black manufacture was produced from an area of 372,437 acres in the amount of 248 billion cubic feet. This area is located in the same reservoir as that from which the pipe line gas was taken. From that portion of the same reservoir from which oil also is produced, 92 billion cubic feet of so-called casinghead gas was produced, most of which came from the free gas formations above the oil.

[fol. 13163] In all, during the 12 month period, there was a total production of approximately 656 billion cubic feet of metered sweet gas, sour gas, and casinghead gas from approximately 1,450,000 acres. This does not include gas used for lease purposes, including the gas lost in drilling in wells and in testing or reconditioning operations.

The size of the field and the disproportionate taking by individual producers and by areas from which production is taken makes it extremely difficult to evaluate with certainty the effect which production from the reservoir as a whole will have on the pressures hereafter existing with respect to a particular tract or the loss from drainage which one tract may suffer as a result of disproportion-

ate production from other tracts. Panhandle Eastern's reserves are well located for protection against excessive drainage, but it will be noted from an examination of the 1940 rock pressure map (Exhibit 26) that low pressure areas are now encroaching on Panhandle Eastern's reserves from the North and from the East.

While many factors make it difficult to determine with the desired degree of accuracy, the pressures and operating conditions which will occur in future years, yet, through a study of well performances and area performances in the past few years, a good idea may be obtained of what may be expected during future years.

Necessity For Future Planning:

Manifestly, a natural gas company transporting large volumes of gas to distant markets and serving many communities must continuously plan for the future and exercise its best judgment in determining whether additional capital expenditures will be required, so that it will, at all [fol. 13164] times, have available adequate supplies of gas and be able to deliver that gas when and as needed. Thus, as estimates of future requirements are made, the Engineering Department must see that transportation facilities adequate to deliver those requirements are available. If existing facilities are inadequate, additions must be arranged for. Likewise, the Production Department must see to it that the Company at all times has available a supply of gas sufficient to meet market requirements as they arise.

All such facilities, production or transportation must be provided in advance of need. Additional wells and gathering lines must be completed by the time additional transportation facilities are finished and those facilities must be finished before the customer's actual need for service arises.

Comparison With Ordinary Utilities:

While other companies of the nature of utilities must, of necessity, look to the future, none is required to do that to such an extent as the natural gas company. An electric utility or a manufactured gas company can rather

quickly construct additional units to manufacture its products. Not so with the natural gas company. Its supply of gas is stored in a reservoir located hundreds of miles from its markets and the reservoir is located several thousand feet below the surface. Many other producers are taking gas from that same reservoir and pressures are constantly declining. Therefore, some representative of a gas pipe line company are constantly study-[fol. 13165] ing its market and market requirements to determine how much gas will be required if the markets are to be adequately served; other representatives keep closly in touch with the transportation facilities, to see that they are adequate promptly to deliver the volumes of gas required; and other representatives keep advised of the market requirements so that the production and gathering facilities will be adequate to deliver the required amount of gas to the main line when needed.

Opportunities Of Witness To Learn Production Conditions:

During the period of my employment by Panhandle Eastern Pipe Line Company, I have had opportunity, and it has been my duty, to observe field performance and well performance, insofar as the properties of Panhandle Eastern in the Panhandle Field are concerned. In conjunction with other representatives of the Production Department, I have made recommendations as to the drilling of wells and their locations and the construction of gathering lines required to gather the gas and deliver it to the main line at Liberal, Kansas. During this period, I have kept in close touch with well performances and familiarized myself with the declines in pressures, potentials, and gas deliverability. It has been necessary for me to do this in order that supplies of gas could be made available for Company requirements as needed and additional wells could be drilled as required, in order to keep the proportion of gas taken from the Hugoton and Panhandle Fields in the desired relation.

In studying well performances, I have noted the effect of acidizing different types of producing formations, the effect of water and cave-ins on the producing capacities of the wells as pressures declined, the effect of salting up of wells and producing formations, as well as many

[fol. 13166] other operating conditions in the field. I have noted the different pressure declines in the different limited areas from which Panhandle Eastern takes gas.

As a result of my experience and studies, I feel qualified to estimate within fairly reasonable limits the length of time Panhandle Eastern will be able economically to continue to produce gas from the Panhandle Field, assuming a continuance of existing conditions except as they may be changed by Panhandle Eastern's own operations. I have made such a study and related the results to the necessary expenditures for both capital and operation over the next 5½ years.

Estimated Requirements:

Prior to making this study, I obtained from Mr. O. W. Morton, Budget and Rate Engineer of Panhandle Eastern Pipe Line Company, his estimates of the gas required for main line purposes from January 1, 1941, to January 1, 1947. This estimate was the same as that contained in Exhibit 40, presented in connection with his testimony, and when adjusted to gas at a 16.4± base with an addition for the gas required for power and loss due to line leakage, the estimated requirements are as follows:

1941	60,000,000 MCF
1942	68,101,459 "
1943	73,951,804 "
1944	77,568,683 "
1945	82,065,748 "
1946	92,034,276 "

The estimate also included the maximum days require-
[fol. 13167] ment for each of those years, since it was necessary for that element to be taken into account in my calculations.

Apportionment To Panhandle Field:

After obtaining these estimates, I allocated the estimated requirements between the Panhandle Field and the Hugoton Field, on the basis of the present approximate allocation between those fields and then allocated the Panhandle Field portion between Panhandle Eastern's own wells and the wells covered by gas purchase contracts. In this allocation, I used my best judgment concerning the

probable pressures and potentials over the period considered and took into consideration the well drilling program which I expect to be carried on during that period. On this basis, the total takes from the Panhandle Field during the period will, in my judgment, be approximately as follows:

	From Panhandle Eastern's Wells MCF	From Gas Purchase Wells MCF
1941 (6 mos. only)	11,811,800	10,182,000
1942	27,635,000	22,365,000
1943	30,909,600	23,090,400
1944	32,455,500	22,544,500
1945	36,036,000	23,964,000
1946	36,024,000	23,976,000

Well Drilling Program:

Of course, it would be possible, when first commencing to produce gas from a reserve for a company to at once [fol. 13168] drill the entire area. Such a practice, however, would necessitate the spending of large sums for drilling purposes and for gathering facilities in advance of need therefor; and it is standard practice in the industry to assemble reserves and then carry on drilling operations if production and market conditions justify. In this way, it is possible to plan future operations intelligently and still save carrying charges on substantial capital investments.

That has been Panhandle Eastern's policy. It has been drilling its wells as economies of the project and lease obligations required.

Wells Drilled 1937-1941:

During the period from January 1, 1937, to June 30, 1941, Panhandle Eastern has drilled 63 wells as follows:

Year	Panhandle Field	Hugoton Field
1937	8	19
1938	4	10
1939	7	5
1940	4	4
1941	2	
Total	25	38

that represented by the estimate of future requirements given me by Mr. Morton.

It will be noted from the tabulations hereinafter presented that, except for some gathering line expense, practically the same additional investments will be required for the same amount of gas. The principal differences are that the particular expenditures will be required at an earlier date to care for anticipated requirements than the dates such expenditures would be required if the load were to remain static on the basis of the present market requirements. These estimated expenditures in some detail, year by year, are as follows:

[fol. 13172]

a. Basic Load

Last Six Months of 1941

a.	Construct and install specially designed liquid separator between Sneed and Hansford Stations in Texas (now being installed), costing	$ 26,300
b.	Construct 2 individual well compressors at Burnett Well No. 108 and Bivins Well No. 91 in Panhandle Field (now being constructed), costing	2,100
c.	Construct warehouse at Zofness Camp (completed in August 1941), costing	500
d.	Drill well near Guymon, Oklahoma, in Hugoton Field, costing	18,851
e.	Purchase new automobile for use of field forces in Hugoton Field, costing	919
f.	Construct Cimarron River jetties to protect present river crossing from high water, costing	6,500
	Total	55,170

1942

a.	Drill 5 wells in Panhandle Field, including acidization and liners, at cost of	106,463
b.	Install liners in 2 old wells in Panhandle Field, at a cost of	910
c.	Install tubing in two old wells in Panhandle Field, costing	4,202
d.	Acidize 4 old wells in Panhandle Field, costing	6,200
e.	Lay well lines for 5 new wells in Panhandle Field, costing	15,395
f.	Construct 5 measuring stations for new wells in Panhandle Field, costing	3,450
g.	Increase capacity of gathering line from Zofness to Sneed by looping existing line between those points and constructing additional gathering line to serve new wells, costing	422,464
h.	Construct 12 additional dwellings for employees, including 3 at Zofness, 3 at Hansford and 6 at Sneed, one of the Hansford dwellings being a 10-room hotel for single employees, at a cost of	81,000

[fol. 13173] i. Build 3 garages, a 3-car garage at Hansford, a 3-car garage at Sneed, and a 6-car garage at Zofness, costing $ 2,760

j.	Drill 13 wells in Texas County, Hugoton Field, including liners and acidization, at a cost of	245,063
k.	Install liners in 2 old wells in Hugoton Field, at a cost of	762
l.	Acidize 10 old wells in Hugoton Field (of which 6 will be 50% owned), at a cost of	15,500
m.	Construct well lines for 14 new wells (including one drilled in 1941), all in Hugoton Field, at a cost of	36,040
n.	Construct and install 10 well dehydrators, at cost of	2,500
o.	Construct 14 measuring stations, at cost of	9,660
p.	Construct trunk gathering line from Liberal toward Hansford, looping existing line approximately 32 miles at cost of	850,048
q.	Construct Cimarron River Crossing for loop line, costing	220,384
r.	Construct gathering line from Section 31, Township 4, to near Optima in Texas County, Oklahoma, costing	324,180
s.	Construct gathering line in Oklahoma, connecting with the Optima line, at cost of	369,267
t.	Construct telephone line to serve at Optima gathering line, costing	10,830
u.	Construct 3 houses for employees at Optima Camp, costing	18,000
v.	Construct office building at Hugoton Camp, costing	7,000
w.	Construct warehouse at Optima Camp, costing	1,000
x	Construct one 6-car garage at Optima Camp, costing	1,380
y.	Install 2-way radio station to serve area within 50 mile radius of Hugoton, costing	3,030
z.	Purchase 3 automobiles (coupes) for serving portions of Hugoton Field, costing	2,755
[fol. 13174]	z-1. Purchase 1-ton truck for Oklahoma area, costing	$ 1,073
	Total	2,761,382
	Less contribution of joint owner on capital expenditures	4,650
	Net expenditures	2,756,732

1943

a.	Drill 5 wells in Panhandle Field, including acidization and liners, costing	110,631
b.	Install liners in 3 old wells in Panhandle Field, costing	1,746
c.	Install tubing in 2 old wells in Panhandle Field, costing	4,528
d.	Acidize 5 old wells in Panhandle Field costing	7,750
e.	Construct well lines for 5 new wells in Panhandle Field, costing	23,335
f.	Construct 5 measuring stations in Panhandle Field, costing	3,450
g.	Construct additional gathering lines in Panhandle Field to serve new wells, costing	7,815
h.	Drill 7 wells in Hugoton Field (5 in Oklahoma and 2 in Kansas), including acidization and liners, costing	132,037
i.	Install liners in 2 old wells in Hugoton Field, costing	796
j.	Acidize 8 old wells in Hugoton Field (4 being 50% owned), costing	12,400
k.	Construct well lines to connect new wells in Hugoton Field, costing	11,311
l.	Construct and install 10 well dehydrators, costing	2,500
m.	Construct 5 measuring stations in Hugoton Field, costing	3,450

During this period of time, the Company has also connected to its gathering system a large number of wells, in both the Panhandle Field and the Hugoton Field (72 wells in all), belonging to those with whom it holds gas purchase contracts. This was an aggregate of 135 wells for 4½ years, or an average of 30 for each 12 months period. [fol. 13169] As pressures decline and lease obligations require further drilling, such additional wells will be drilled by Panhandle Eastern as are required to satisfy its market requirements and to protect the Company's gas reserves.

Gathering Facilities:

It has also been the policy of the Company to construct gathering lines and install power and other facilities in connection therewith as such additional lines and power are needed. Of course, when laying lines into particular areas, it is economical to provide some excess capacity over and above that immediately required, in order to decrease eventual overall costs, but the lines are constructed to serve the future production from the general area in such a way that by the addition of more power or the looping of lines, a larger number of wells may eventually be served. The Company, in order to gather the increased volumes of gas needed to supply its increasing markets and in order to care for the same volumes of gas at reduced pressures and potentials, will from time to time be required to further add to its gathering facilities in both fields through increases in length of gathering lines and increases in power.

As pressures and potentials of the wells decline, it is obvious that the same volumes of gas must be obtained from a greater number of wells. It is also obvious that to transport this lower pressure gas there must be either (a) more or larger gathering lines, (b) more field compressors, or (c) more power in the field compressor stations. It is my judgment that all three of these methods will be used [fol. 13170] by Panhandle Eastern Pipe Line Company in connection with the future operation of its gathering lines.

Of course, as additional wells are drilled, it will also be necessary to connect those wells to the gathering system. In the case of wells drilled in areas not now served by

gathering lines of Panhandle Eastern, it will be necessary to construct new gathering lines connecting with the trunk gathering line. These new lines will, of course, be constructed in the light of probable later requirements of other wells to be drilled in later years of the project.

Future Capital Expenditures.

Much of my time for several years has been spent in a study of the conditions existing in the two fields from which Panhandle Eastern takes gas, in an effort to assist the management in plans for necessary future expenditures in those fields. Practically all of my time for several weeks past has been spent in a study of the expenditures, both capital expenditures and operating expenses, which will be required within the next few years. Special attention has been given to the next 5½ years.

In this study, I have estimated the amount of drilling which will be required and the cost thereof, the cost of increased gathering facilities and such other capital expenditures as are related to the production and gathering of gas. This study has been made on two bases:

(a) The Basic Load.

I have estimated the capital expenditures which would be required each year if annual requirements of gas remain static at the present level. I have determined what addi- [fol. 13171] tional investments would be required if there were to be no increase in production—in other words, the additional capital investments which would be required to produce and gather the same volumes of gas which the Company is now marketing. This study was not made with an idea that the load will remain static. We know that it will not do so. The present production was used as a base so that proper additions could be made for the increasing loads which the Company anticipates.

(b) The Anticipated Load.

After estimating the capital expenditures which will be required for the basic load each year (considering the present production as the basic load), I then estimated the additional investments which will be required each year to take care of the anticipated load. The anticipated load is

n.	Construct additional gathering lines to serve new wells in Hugoton Field, costing	151,887
	Total	473,636
	Less credit on acid treatment from joint owner of 4 wells	3,100
	Net expenditures	470,536

[fol. 13175

1944

a.	Drill 5 wells in Panhandle Field, including acidization and liners, costing	$ 103,967
b.	Install liners in 4 old wells in Panhandle Field, costing	2,079
c.	Install tubing in 4 old wells in Panhandle Field, costing	9,756
d.	Acidize 6 old wells in Panhandle Field, costing	9,300
e.	Lay well lines connecting 5 new wells in Panhandle Field, costing	15,071
f.	Construct 5 measuring stations in Panhandle Field, costing	3,450
g.	Construct additional gathering lines serving new wells in Panhandle Field, costing	27,450
h.	Drill 4 wells in Hugoton Field (3 in Oklahoma and 1 in Kansas), costing	75,441
i.	Install liners in 2 old wells in Hugoton Field (both 50% owned), costing	1,018
j.	Construct well lines to connect 3 Oklahoma wells (the new Kansas well to be served by Argus), costing	2,593
k.	Construct 3 measuring stations in Hugoton Field, costing	2,070
l.	Construct additional gathering lines to serve new wells in Hugoton Field, costing	269,570
	Total	521,768
	Less credit on liners paid by joint owner	509
	Net expenditures	521,259

1945

a.	Install liners in 4 old wells in Panhandle Field, costing	2,519
b.	Install tubing in 2 old wells in Panhandle Field, costing	4,400
c.	Acidize 5 old wells in Panhandle Field, costing	7,750
[fol. 13176] d.	Install 2 additional 1300 H.P. units at Sneed Station with additional scrubber, cooling tower and auxiliary engine, costing	$ 362,800
e.	Drill 4 wells in Hugoton Field (2 in Kansas and 2 in Oklahoma), costing	75,360
f.	Install liners in 3 old wells in Hugoton Field (one 50% owned), costing	1,490
g.	Install tubing in 2 old wells in Hugoton Field (50% owned), costing	3,854
h.	Acidize 4 old wells in Hugoton Field (50% owned), costing	6,200
i.	Construct well lines to connect 4 new wells in Hugoton Field, costing	11,279
j.	Construct 4 measuring stations in Hugoton Field, costing	2,760

k.	Construct additional gathering lines to serve new wells in Hugoton Field, costing	85,800
	Total	564,278
	Less credit for contribution by joint owner for acidization, liners and tubing	5,185
	Net expenditures	559,093

1946

a.	Install liners in 2 old wells in Panhandle Field, costing	1,320
b.	Install tubing in 2 old wells in Panhandle Field, costing	4,556
c.	Acidize 3 old wells in Panhandle Field, costing	4,650
d.	Construct one additional dwelling Zofness Camp, costing	6,000
e.	Drill 15 wells in Hugoton Field (10 in Oklahoma and 5 in Kansas, costing	282,485
f.	Construct well lines to connect 15 new wells in Hugoton Field, costing	46,865
g.	Construct 15 measuring stations in Hugoton Field, costing	10,350
[fol. 13177]	b. Construct additional gathering lines to serve 15 wells in the Hugoton Field, costing	264,407
	Total expenditures	$ 620,633

The foregoing tabulations, aggregating $4,983,423, represent the capital expenditures which would be required by the end of 1946 for additional facilities in the wells and gathering lines of Panhandle Eastern Pipe Line Company, if its load were not increased beyond the present annual demand. I have used that estimate as a base for determining the capital expenditures which will probably be required over that same period of time by way of additions to the production and gathering facilities, in order to permit the Company to deliver to its main pipe line the volumes of gas which Mr. Morton has estimated will be required during that same period. I now present tabulations based on such estimates.

b. Anticipated Load

Last Six Months of 1941

a.	Construct and install specially designed liquid separator between Sneed and Hansford Stations in Texas (now being installed), costing	$ 26,300
b.	Construct 2 individual well compressors at Burnett Well No. 108 and Bivins Well No. 91 in Panhandle Field (now being constructed), costing	2,100
c.	Construct warehouse at Zofness Camp (completed in August 1941), costing	500
d.	Drill well near Guymon, Oklahoma, in Hugoton Field, costing	18,851

j.	Construct well lines connecting 5 Oklahoma wells and 5 Kansas wells, costing	16,820
k.	Construct 10 measuring stations in Hugoton Field, costing	6,900
l.	Construct additional gathering lines serving new wells in Hugoton Field, costing	207,951
m.	Construct and install 5 well dehydrators in Hugoton Field, costing	1,250
	Total	612,365
	Less credit contribution by joint owner on liners	509
	Net expenditures	611,856

1945

a.	Install liners in 4 old wells in Panhandle Field, costing	2,512
b.	Install tubing in 2 old wells in Panhandle Field, costing	4,406
c.	Acidize 5 old wells in Panhandle Field, costing	7,750
d.	Drill 10 wells in Hugoton Field (5 in Kansas and 5 in Oklahoma), costing	188,230
e.	Install liners in 3 old wells in Hugoton Field (one 50% owned), costing	1,490
f.	Install tubing in 2 old wells in Hugoton Field (both 50% owned), costing	3,854
g.	Acidize 4 old wells in Hugoton Field (all 50% owned), costing	6,200
h.	Construct well lines to connect 10 new wells in Hugoton Field, costing	36,234
[fol. 13182]	i. Construct 10 measuring stations in Hugoton Field, costing	6,900
j.	Construct additional gathering lines to serve new wells in Hugoton Field, costing	135,257
	Total	392,900
	Less credit contribution for joint owner account acidization, liners and tubing	5,185
	Net expenditures	387,715

1946

a.	Install liners in 2 old wells in Panhandle Field, costing	1,320
b.	Install tubing in 2 old wells in Panhandle Field, costing	4,536
c.	Acidize 3 old wells in Panhandle Field, costing	4,650
d.	Construct 1 additional dwelling at Zotness Camp, costing	6,000
e.	Drill 20 wells in Hugoton Field (10 in Kansas and 10 in Oklahoma), costing	376,800
f.	Construct well lines to connect 20 new wells in Hugoton Field, costing	63,943
g.	Construct 20 measuring stations in Hugoton Field, costing	13,800
h.	Construct additional required gathering lines in Hugoton Field, costing	149,291
i.	Construct new compressor station near town of Hugoton serving areas West of Hugoton, at cost of	362,398

i.	Construct dehydration plant in connection with new compressor station, costing	70,000
k.	Construct 4 dwellings for employees—1 at Optima and 3 at new Hugoton Compressor Station, costing	24,000
l.	Construct 2 garages, a 3-car garage at Hugoton and a 2-car garage at Optima, costing	1,190
m.	Purchase 2 additional automobiles, one for use in the Hugoton area and the other for use in the Optima area, at a cost of	1,837
[fol. 13183] n.	New main station radio unit and eight 2-way radio units, costing	3,690
	Total	1,083,445
	Total expenditures under anticipated load	$7,147,219

Thus, even if no gas were required over the next 5½ years in excess of the volumes now being marketed by the Company, additional capital expenditures in at least the sum of $4,983,423 will be required by the end of 1946.

But, we know that larger volumes of gas will be required and that such increases, in large part, will be beyond the control of the Company. To serve present markets and the anticipated increases, capital expenditures in a more realistic figure will be required. To serve the existing markets, as well as anticipated increases, the capital expenditures required will be at least the sum of $7,147,219.

Statistical Schedule:

Schedule 1 of Exhibit 43 is a recapitulation of the additional capital expenditures required each year during the period referred to in order to care for the basic load. Schedule 2 of the same exhibit is a similar recapitulation of the expenditures which will be required to care for the estimated loads. These estimates only relate to the additional capital expenditures required South and West of Liberal Compressor Station.

Prices Used:

The unit costs used by me for material required in con- [fol. 13184] nection with these expenditures are either those used in Mr. Biddison's 1941 Reproduction New Report, Exhibit 39, or the prices for similar units paid by the Company under its last purchase orders. Labor charges have been computed on the schedules now current. None of the estimates takes into consideration the indicated future price advances.

Operation And Maintenance Expenses.

In addition to future capital expenditures, Panhandle Eastern will, in the future, be required to increase its operation and maintenance expenses, even to produce the same volumes of gas which it now produces. This necessity will result from lowered pressures and potentials in the gas fields, the increasing age of the physical properties, and the circumstance that the expenses incurred in connection with the Hugoton Field are greater in proportion to the volumes of gas produced than those now current in the Panhandle Field.

Schedules Discussed:

On Schedule 3, Pages 1, 2 and 3 of Exhibit 43, I have shown my estimate of operation and maintenance expenses which will be incurred in the Panhandle Field and in the Hugoton Field, respectively, over the period already described in order for the Company to produce and deliver to the main pipe line at Liberal Compressor Station the "basic load", that is, an amount of gas equivalent to the volumes now being so produced and delivered.

On Schedule 4, Pages 1, 2 and 3 of the same exhibit, I [fol. 13185] show the operation and maintenance expenses in those fields which I estimate will be required to so produce and deliver the anticipated requirements, that is, the volumes of gas which Mr. Morton has estimated will be needed to fulfill Panhandle Eastern's market requirements over the same period.

It will be noted that these schedules show the expenses incurred during 1940 and 1941 for comparison with those which are expected during the years 1942 to 1946. The 1940 figures are the expenses actually incurred by the Company during 1940. The 1941 figures reflect the actual expenses incurred during the first six months of the year and the estimated expenses during the last six months. These expenses so shown in Schedules 2 and 3 do not reflect any administrative or other general overhead Company expense. The general office expenses included are only those directly applicable to the activities of the production and gathering system.

Rising Price Levels:

I recognize that rising price levels will materially increase the cost of equipment heretofore purchased, but, since I have made no study with respect to the amount of such increased prices, I have not taken future price levels into consideration, but have assumed a continuance of present prices with respect to both material and labor. No consideration has been given probable increases in tax rates. All add valorem taxes have been computed on the assumption that the average rates over the past five years will continue.

Aggregate Future Production From Texas Leases.

In connection with my study of the Panhandle Field, I have estimated the volumes of gas which Panhandle Eastern will be able to take from its owned leases in the Pan- [fol. 13186] handle Field through the year 1956. In arriving at this estimate, I have taken into consideration the requirements of the main line through 1946 and have assumed that the Company will continue to take from the reserves in the Panhandle Field the same proportion of the market outlet which it now takes, so long as the wells drilled in that field will deliver such proportions. Under this apportionment, the maximum amount to be taken by Panhandle Eastern from the Panhandle Field during any one year would be 60 billion cubic feet.

I have then apportioned the withdrawals between wells belonging to Panhandle Eastern and wells belonging to other producers with whom it holds gas purchase contracts, on approximately the same percentage as is now being used in determining well allowables.

Following 1946, I made no allowance for increasing production from the Panhandle Field, but recognized that as the years go by the volumes in that field will become less and less irrespective of the increases which Panhandle Eastern may have in its aggregate market requirements. I also recognized that as the years go by a greater percentage of aggregate volumes taken from the Panhandle Field will be produced by Panhandle Eastern's own wells, with

e.	Purchase new automobile for use of field forces in Hugoton Field, costing	919
f.	Construct Cimarron River jetties to protect present river crossing from high water, costing	6,500
	Total	55,170

[fol. 13178] 1942

a.	Drill 5 wells in Panhandle Field, including acidization and liners, at a cost of	$ 106,463
b.	Install liners in 2 old wells in Panhandle Field, at a cost of	916
c.	Install tubing in 2 old wells in Panhandle Field, costing	4,262
d.	Acidize 4 old wells in Panhandle Field, costing	7,750
e.	Lay well lines for 5 new wells in Panhandle Field, costing	15,395
f.	Construct 5 measuring stations for new wells in Panhandle Field, costing	3,459
g.	Construct trunk gathering line, looping present line from Hansford Station South 31.1 miles, costing	672,133
h.	Increase capacity of present gathering line by looping existing lines and additional gathering lines, costing	422,464
i.	Install 2,600 additional H.P. at Sneed Station and increase cooling tower capacity, 1 additional auxiliary engine and one scrubber, costing	362,800
j.	Install 1300 H.P. at Hansford Station, costing	121,200
k.	Construct 12 additional dwellings for employees, including 3 at Zofness, 3 at Hansford and 6 at Sneed, one of the Hansford dwellings being a 10-room hotel for single employees, at a cost of	81,000
l.	Build 3 garages, a 3-car garage at Hansford, a 3-car garage at Sneed and a 6-car garage at Zofness, costing	2,760
m.	Drill 19 wells in Texas County, Hugoton Field, including liners and acidization, at a cost of	358,169
n.	Install liners in 2 old wells in Hugoton Field, at a cost of	762
o.	Acidize 4 old wells in Hugoton Field, costing	15,500
p.	Construct Cimarron River Crossing for loop line, costing	220,384
q.	Construct trunk gathering line from Liberal toward Hansford, looping existing line approximately 32 miles, at cost of	850,048
[fol. 13179] r.	Construct gathering line from Section 31, Township 4, to near Optima in Texas County, Oklahoma, costing	$ 324,180
s.	Construct gathering line in Oklahoma, connecting with the Optima line, at cost of	856,606
t.	Construct well lines for 20 new wells, costing	47,610
u.	Construct and install 10 well dehydrators, at cost of	2,500
v.	Construct 20 measuring stations, at cost of	13,800
w.	Construct 3 houses for employees at Optima Camp, costing	18,000
x.	Construct office building at Hugoton Camp, costing	7,000
y.	Construct warehouse at Optima Camp, costing	1,000
z.	Construct one 6-car garage at Optima Camp, costing	1,380
z-1	Construct telephone line to serve at Optima gathering line, costing	10,836
z-2.	Install 2-way radio station to serve area within 50 mile radius of Hugoton, costing	3,030

z-3 Purchase 3 automobiles (coupes) for serving portions of Hugoton Field, costing	2,756
z-4 Purchase 1-ton truck for Oklahoma area, costing	1,072
Total	4,535,220
Less credit on acid treatment from joint owner	4,650
Net expenditures	4,530,570

1943

a. Drill 5 wells in Panhandle Field, including acidization and liners, costing	110,631
b. Install liners in 3 old wells in Panhandle Field, costing	1,746
c. Install tubing in 2 old wells in Panhandle Field, costing	4,528
d. Acidize 5 old wells in Panhandle Field, costing	7,750
[fol 13180] e. Construct well lines for 5 new wells in Panhandle Field, costing	$ 23,335
f. Construct 5 measuring stations in Panhandle Field, costing	3,450
g. Construct additional gathering lines to serve new wells in Panhandle Field, costing	7,815
h. Drill 12 wells in Hugoton Field (10 in Oklahoma and 2 in Kansas), costing	226,292
i. Install liners in 2 old wells in Hugoton Field, costing	796
j. Acidize 8 old wells in Hugoton Field (4 being 50% owned) costing	12,400
k. Construct well lines connecting 10 Oklahoma wells (2 Kansas well lines being built by Argus), costing	20,710
l. Construct 10 measuring stations in Hugoton Field, costing	6,900
m. Construct and install 10 well dehydrators, costing	2,500
n. Construct additional gathering lines serving new Hugoton wells, costing	52,710
Total	481,563
Less credit on acid treatment by joint owner	3,100
Net expenditures	478,463

1944

a. Drill 5 wells in Panhandle Field, including acidization and liners, costing	103,967
b. Install liners in 4 old wells in Panhandle Field, costing	2,079
c. Install tubing in 4 old wells in Panhandle Field, costing	9,756
d. Acidize 6 old wells in Panhandle Field, costing	9,309
e. Lay well lines connecting 5 new wells in Panhandle Field, costing	15,071
f. Construct 5 measuring stations in Panhandle Field, costing	3,450
[fol. 13181] g. Construct additional gathering lines serving new wells in Panhandle Field, costing	$ 27,450
h. Drill 11 wells in Hugoton Field (5 in Oklahoma and 6 in Kansas), costing	207,353
i. Install liners in 2 old wells in Hugoton Field (both 50% owned), costing	1,018

lesser percentages produced from gas purchase wells, due to differences in probable pressures and potentials and to the further circumstance that the economics of its project might permit Panhandle Eastern to install well booster stations in connection with its wells, whereas the economics of some others holding gas purchase contracts might not justify such expenditure. Allowing for these various elements, I have estimated the volumes of gas which Panhandle Eastern will probably be able to produce from its [fol. 13187] own wells and wells under gas purchase contracts during the period ending December 31, 1956. That estimate is presented on Schedule 5 of Exhibit

Abandonment Of Panhandle Field

Panhandle Eastern must face the fact that the time will come when it will not be economically advisable for it to attempt to continue its production operations in the Panhandle Field. When that time will come cannot, with certainty, be determined. The many competitive interests producing from that field, the probabilities of the future requirements of all of such competitive interests, the irregularity in the existing pressure and production patterns, and many other elements make a definite determination of the necessary abandonment point impossible. While this is true, it is also true that past and present trends indicate within a reasonable degree of certainty what may be expected in the future. I have, for several years, been carefully watching and considering these trends and their effect in the areas from which Panhandle Eastern is taking gas. My duties make it necessary for me continuously to study existing trends in arriving at the recommendations which I make to the management with respect to further and future operations in that field. We must, of course, plan for the future with the hope of producing the most gas which we can economically take from the field and yet we cannot afford to make expenditures in the field which will not be justified by the volumes of the gas which we may reasonably expect to thereafter produce. It has been necessary, therefore, in my estimates of future production from the field to take into consideration all known factors which would in any way have an influence on the point at which it will not become economic for this Company longer to utilize its facilities in the Panhandle Field.

[fol. 13188] While it is frequently the case that reserves in a field or reserves under particular leases are computed on assumed abandonment pressures and with allowances of assumed recovery percentages, such a rule cannot be applied with certainty to this field, or, in my opinion, to any particular company in this field in determining the point at which it ceases to produce gas. Different companies will be differently situated. Some may be able to produce at a much lower abandonment pressure than the economics of other companies will justify. This is especially true with respect to pipe lines which serve local areas or pipe lines whose operating pressures can be substantially lower than those which may be required by the economics of other companies. Also, those producing gas for manufacture of carbon black or other products do not require gas at high pressures, since the plants are located in the field, and may be able to take gas at very low pressures.

After a careful study of Panhandle Eastern's reserves, its gathering lines and its operating problems, I have reached the conclusion that it may be able to continue to produce some of its wells down to approximately 50 pounds wellhead pressure. The probability is that many wells owned by this Company may be abandoned at substantially higher pressures, since the deliverability of gas from gas wells varies even at the same pressures, and a determination of the amount of gas which the Company can actually take from a well at a given time is of greater importance than a determination of the existing pressure at that particular well.

In making my study of the point at which it will probably not be economic for Panhandle Eastern to further operate in the Panhandle Field, I first divided the area from which [fol. 13189] it takes gas into seven producing areas. Exhibit 46 is a map showing those separate areas. I did this so that a careful and detailed study might be made of the various areas from the standpoint of past pressures, potentials and gas deliverability. I also took into consideration the gathering lines which Panhandle Eastern now has in the Panhandle Field serving those different areas.

I then determined the pressure record and rates of withdrawal of each area, giving consideration to the rate of de-

velopment during the past six years, the number of undrilled units remaining in each area and estimates of geologists with respect to the acre gas content, on the assumption that the average per acre gas content of the better area of the field is approximately that of Panhandle Eastern's reserves.

I then developed a pressure decline curve for each of the group areas and determined the deliverability of gas at various operating pressures from the wells located in those areas. This gave me a good idea of the volumes of gas which might be expected from the various wells at such well pressures as may hereafter exist. This was, of course, on the assumption that the physical condition of the wells would not change.

After having made this study of each individual area, I developed a pressure trend curve for the field as a whole, based on past performances and on the assumption that the pressure reports of the Texas Railroad Commission are accurate. I obtained the best information I could with respect to the volumes of gas which have been produced [fol. 13190] from the field during various pressure periods and applied that information in developing the pressure trend curve.

I realilzed that an average trend curve for the field as a whole could not be applied directly to all the areas involved, but felt that it would exert a substsantial influence on the declining pressures in each of the areas. I recognized that the rate of production would be different in the different areas and that similar amounts of production from each area would not result in the same pressure drops. Therefore, taking the pressure trend curve for the field as a whole as a base, I prepared my own estimate of the pressure trends in the seven producing areas referred to, thus reaching a conclusion as to the pressures which will probably exist in each of those areas at different times, based on my best judgment with respect to the production which will be taken from those areas.

I reached the conclusion that the pressures in these areas will probably reach the approximate pressure of 50 pounds at different periods during the years 1956 to 1960 and, therefore, that if 50 pounds be the actual abandonment

pressure, it would not be economic for the Company to continue to produce from those areas after those dates.

Considering the areas as a whole, I reached the conclusion that during 1957 the Company probably will not be able to produce more than 5 billion cubic feet from both the gas purchase reserves and the owned reserves, of which approximately 3,453,000 cubic feet will be taken from its own reserves. These probable limits will continue to decrease, so that by 1960 it would probably not be able to produce more than approximately 2 billion cubic feet, all of which will probably be taken from its own wells.

[fol. 13191] Whether it will be economical for this Company to continue to produce gas after the deliverability declines to 7 billion cubic feet in 1956 is problematical. At that time it probably cannot take more than approximately 4.8 billion cubic feet from its own wells annually, or an average of approximately 181 MCF daily from each of its 72 wells. Whether it can at that time continue further to utilize its facilities in the Panhandle Field is doubtful. Certainly any further reductions in the volumes it can expect to produce from its wells will make it less and less advisable to continue to incur the necessary operation and maintenance expenses required to operate in that field.

Therefore, it is my judgment that Panhandle Eastern will not be justified in further producing gas from its reserves in the Panhandle Field longer than 15 years from the present.

Exhibit 44 is a map, prepared by me, showing the development program as to both new wells and gathering facilities which will be required by the end of 1946, if the market requirements of Panhandle Eastern remain at their present level—in other words, without giving consideration to increased market requirements.

Exhibit 45 is a similar map, prepared by me, showing the development program which will be required in connection with the drilling of wells and furnishing gathering facilities to meet the added market requirements estimated by Mr. Morton.

The legends on these maps, found in the lower right hand corner of each, are self-explanatory. A different color is used to indicate the development required each year. Acreage under lease by the Company which will be [fol. 13192] drilled in later years of the project is also show on these maps and acreage under gas purchase contracts is also appropriately shown.

17 (1) In January, 1941, Panhandle Eastern Pipe Line Company distributed
18 to the company's common stockholders in payment of a dividend,
19 807,367 shares of common stock of a par value of 42 cents each,
20 of Central Distributing Company (a wholly owned subsidiary).
21 The concurrent charge to earned surplus was $339,094.14.

22 (2) On March 24, 1936, the Board of Directors authorized a dividend
23 to be paid by the issuance of 646,354 shares of common stock
24 and fixed the price at which such shares were deemed to have
25 been issued at $15,017,300 to be charged to capital surplus.

Current and Future Trends In Commodity Prices and Wages

By David Friday

I have prepared the following report on the probable future course of prices of commodities and of wages in the United States during the year beginning July 1, 1941, and for the period subsequent thereto.

In my opinion the index of wholesale commodity prices, as compiled by the Bureau of Labor Statistics, will be at least 110 by June 30, 1942. That index is based on the prices of 1926 as 100, and stood at 91.2 on September 27, 1941. This means that during the next eleven months, wholesale prices will rise about 20 per cent and reach a level 10 per cent above that which prevailed in 1926.

This upward movement of prices will be dominated by the forces which have been set in motion by the war in Europe, and by the defense program in the United States. The experience derived from the three major wars of the past century indicates clearly what the effect of these forces will naturally be.

Prices and War

Major wars of any prolonged duration have always caused profound disturbances in commodity markets. The terrific strain of war demand on raw-material resources, producing capacity, and manpower, and the interruption of the normal flow of world commerce, and the great expansion of the use of credit have practically always led to spectacular increases in the general level of commodity prices.

[fol. 13239] Although these effects have naturally been most pronounced in the nations actually at war, they have also extended to all countries buying or selling in world markets. The extent of these disturbances is clearly depicted by the trend of wholesale prices in the United States since the year 1800. Each of the three major American wars—the War of 1812, the Civil War, and the World War—brought a price boom. This is shown in the following chart.

[fol. 13240] This chart is based on a table of prices published in the Monthly Labor Review of July, 1935. A reprint of that table entitled, "One Hundred Thirty-four Years of Wholesale Prices," was also issued by the United States Bureau of Labor Statistics. The chart has been extended to cover the period to September 1914 by the use of the price statistics of that bureau.

A study of price movements during the last twenty-five months demonstrates that the effect of this present war upon American prices is already fully under way. The Bureau of Labor Statistics Index number of wholesale prices shows that in August, 1939, which was the last month before the outbreak of war in Europe, the level of wholesale commodity prices stood at 75.0. The index had risen to 91.5 in September, 1941. The prices have, therefore, risen 16.5 points or 22 per cent since the outbreak of the war.

This index number of wholesale prices for the years 1913 to date is attached to this report as Exhibit "A". On page 4 of this report is a table showing the index by groups for August, 1939 and for certain intervening months down to date. This table also shows the percent of increase for each group from August, 1939 to September 20, 1941.

[fol. 13241]

Index Numbers Of Wholesale Prices Of Commodities By Groups

(1926 - 100)

Groups	Aug. 1939	Aug. 1940	Dec. 1940	Mar. 1941	Sept. 20 1941	Increase Aug. 1939 to Sept. 20, 1941
All Commodities	75 0	77 4	80 6	81 5	91 5	22 0
Farm Products	61 0	65 6	69 7	71 6	91 2	49 5
Foods	67 2	70 1	73 5	75 2	88 5	31 7
Hides	92 7	96 9	102 3	102 6	111 7	20 5
Textile Products	67 8	72 3	74 8	78 4	89 2	31 6
Fuel and Lighting	72 6	71 1	71 7	72 0	80 0	10 2
Metals and Metal Products	93 2	94 9	97 6	97 7	98 7	5 9
Building Materials	82 6	93 3	99 3	99 5	106 2	18 5
Chemicals and Allied Products	74 2	76 7	77 7	79 8	87 8	18 3
House Furnishings	85 6	88 5	88 9	89 5	98 0	14 5
Miscellaneous	73 3	76 7	77 3	77 6	85 0	16 0

Source: United States Department of Labor, Bureau of Labor Statistics.

[fol. 13242] The Bureau of Labor Statistics also complies an index of prices for twenty-eight basic commodities. This index takes August, 1939 as 100 and is compiled daily for the period since the outbreak of the war. It has risen from 100 in the last month before the outbreak of the war to 151.7 on August 8, 1941.

The table below shows the index of these prices as on several dates from August, 1939 to August 8, 1941 by the five groups into which the Bureau divides them. The smallest rise of any group is 45.0 per cent, and the highest is 60.8. This new index is much more sensitive to changes in market conditions than is the Bureau's monthly index of wholesale prices.

Index Numbers of 28 Basic Commodities

Groups	Aug. 1939	Aug. 15 1940	Dec. 31 1940	Mar. 31 1941	Sept. 30 1941
28 Basic Commodities	100 0	105 6	118 5	135 0	155 7
Import Commodities (11)	100 0	106 1	119 5	144 3	157 6
Domestic Commodities (17)	100 0	105 4	117 9	129 3	154 5
Domestic Agricultural (7)	100 0	111 9	126 4	132 2	162 0
Foodstuffs (12)	100 0	100 8	115 2	134 4	170 8
Raw Industrial (16)	100 0	109 3	121 0	135 4	145 1

The average increase in these basic commodity prices is almost three times as large as the movement in the general index number shown in Exhibit A. This difference is due, in large measure, to the fact that the 883 prices included in the general price index are quoted prices only. The twenty-eight basic commodities are spot prices and many of them are quoted on organized exchanges. In other words, they are actual prices paid. At a time of changing price levels these express the prevailing trend in prices more accurately than mere quoted prices do.

[fol. 13243] If the commodities that go to make up the index of wholesale prices of the Bureau of Labor Statistics had advanced as rapidly in price as did these twenty-eight basic commodities, the general index would now stand at 155.7 times 75.0 or 116.8.

One of the lines of classification within these basic materials is that between imported and domestic commodities.

While all basic commodities had risen from 100 in August, 1939 to 155.7 on September 30, 1941, domestic commodities had gone to 154.5 and imported commodities to 157.6.

This has an important bearing on the possibility of restraining the rise of prices by control. Whatever may be accomplished in this direction in the case of domestic commodities, there is no possibility of avoiding the effect of increased ocean freight rates, or insurance on imported commodities. Their prices must rise to cover these costs. Early this year the shortage of shipping reached the emergency stage and the price of imported goods rose with this shortage and these costs. From December 31, 1940 to September 30, 1941, imported commodities advanced 38.1 points while domestic rose only 36.6.

It is illuminating to compare price movements at present with those in the World War. After the outbreak of hostilities at the end of August, 1939, the Bureau of Labor Statistics index of wholesale prices rose slightly then fell again. In June, 1940 it had risen only from 75.0 in August, 1939 to 77.5. Many people believed that this action indicated that we would escape a price increase such as we had during the World War. That war broke out on July 28, 1914. In the first two months after that prices rose 4 per cent in this country, but by December, 1941 they fell again to the July level. During the first fifteen months of hos- [fol. 13244] tilities in Europe there was practically no further advance in the general level of American commodity prices.

The Bureau of Labor Statistics index of wholesale prices (see Exhibit "A") stood at 67.3 (on the basis of 1926=100) in July, 1914. Prices went to 70.2 in September, 1941, then fell slightly and did not reach 70.2 again until October, 1915, which was fifteen months after the war began. Eight months later, in the twenty-fourth month of the war, i. e., in July, 1916, these prices stood at 83.4 which was 23.9 per cent above July, 1914.

By March, 1917, just before the United States entered the war, prices had risen to 107.7, and by June, 1917 to

122.0. The Bureau of Labor Statistics price index remained near this level until the end of the year, then rose to 136.3 in November, 1918, the month of the armistice. In the post-war boom of 1919 and early 1920, prices reached their peak of 167.2 in May, 1920.

When these prices are stated on a base of July, 1914 as 100, the resulting index shows the rate and extent of advance in prices during the first World War.

Prices In The World War

Date	On basis 1926 = 100	On basis July, 1914 = 100	Month of Warfare
July, 1914	67 3	100 0	1st
Oct. 1915	70 2	104 3	15th
Aug. 1916	85 1	126 4	25th
Mar. 1917	107 7	160 0	32nd
Aug. 1917	124 8	184 0	36th
Nov. 1918	136 3	202 5	52nd
May, 1920	167 2	248 4	(17th) (Post-war Month)

Source: United States Department of Labor, Bureau of Labor Statistics.

[fol. 13245] The present war is now in its twenty-fifth month and the general Bureau of Labor Statistics index of wholesale prices stands at 122.0 per cent of August, 1939, as is shown on page 4. Prices have, therefore, advanced 4.4 per cent less in the first twenty-five months following the outbreak of hostilities in this war. This was due largely to the extraordinary rise which occurred during the World War in the chemical and drug group; and a rise of almost 50 per cent in metals and metal products. In 1914 we were so greatly dependent upon Germany for coal-tar products and other chemicals that the chemicals and drugs group of prices rose from 77.9 in July, 1914 to 166.8 in June, 1915,—an increase of 114.1 per cent, while all prices rose only 23.2 per cent. In this present war period our American chemical industry was prepared to supply our needs in this line with an advance to date of only 13 per cent in prices.

The rise in the price of metals was largely due to the advance in the non-ferrous group, especially copper and

aluminum. In these lines prices were driven up unduly by speculation.

If it had not been for this extraordinary advance in the price of chemicals and metals, the rise would not have been materially larger in the first months of World War I than it has been in the present European war.

After August, 1916 the rise of prices was much more rapid than it had been during the nine months from October, 1915 to August, 1916. In that period the total rise had been 22 per cent of the July, 1914 level.

In the year which followed August, 1916 the rise was 57.6 per cent of the prices in July, 1914. To put it another way, after prices had risen 26 per cent during the first 25 months of war to July, 1916, they rose another 57.6 per cent in the following twelve months. This brought them to 184.0 in August, 1917.

[fol. 13246] Prices made this further rise in the twelve months following August, 1916 after chemicals and metals had already made the great advances which were noted above. As a matter of fact, chemicals were lower throughout this whole twelve month period than they had been in June, 1916. It is my opinion that prices will likewise have a further rise from the level which prevailed on September 20, 1941.

The advance in commodity prices which has resulted from the war in Europe is not limited to the United States, but has occurred in other countries,—both belligerents and non-participants in the war, as is shown by the commodity price indexes of ten countries computed by General Motors and Cornell University.

This index is based on August, 1939 as 100 and is built upon the prices of forty basic commodities, and the list is the same for each country, in so far as possible.

The indexes, which are based on prices expressed in the currency of each country, were reported on May 24, 1941 as follows:

[fol. 15247]

Commodity Price Indexes Of 10 Countries

(August, 1939 = 100)

[fol. 13248] The reasons for these price advances in war times are to be found in the laws of price and the forces which govern price movements. A study of those laws, and of the forces which are set in motion by war show that it is entirely natural that prices should rise at such times.

The simplest statement concerning the determination of market price is that demand and supply control it. This is the explanation most frequently heard in the market place and on the street. And the statement is true. For as the terms "demand" and "supply" are commonly used, they are taken to include all the forces that influence buyers and sellers. But like most other general explanations, this formula is of little assistance in understanding the actual movements of price until the terms "demand" and "supply" have been exactly defined and until the complex forces which are grouped under these two names have been analyzed.

The first step in the analysis is the definition of demand. The demand for a commodity is the amount of any given good which individuals stand ready to buy at a particular price, during a given time, and at a given place. Demand is the quantity which buyers stand ready to take at some specific price.

A general increase in demand on the part of buyers who have the necessary purchasing power will increase prices. When, for example, business revived during the years 1936 and 1937 and national income increased, as it does in periods of business revival, the result was a rise in the wholesale price index from 79 to 88. This was due to the fact that the increased national income led to a more active demand for commodities. For example, the average weekly earnings of factory workers rose from less than $22.00 in the first half of 1935 to $28.00 in the spring of 1937. The national income went from $56 billions to $71 billions. This rise translated itself into increased demand and caused commodity prices to rise to 88, which is the [fol. 13249] highest point they had reached since the depression of 1930-1932.

The demand which comes from government during a serious and protracted war is especially potent. This is due, first of all, to the motives which prompt that demand. A nation, in times of war, does not buy with a view to making profit. A private manufacturer purchases raw materials and partly finished commodities if he thinks he can make a profit by fabricating them into a finished product. And he will not pay a price if it is too high to enable him to do this. But governments are not prevented from buying by considerations of profit. Their purchases are made for an entirely different reason. Those reasons are non economic, but exceedingly effective.

When war strikes across the current of a nation's economic life, it produces a complete revaluation of the ends of conduct. Things which before were held in high esteem are now sacrificed ruthlessly and without hesitation to non-economic ends. Even life itself is sacrificed. No one asks that the traditional values which existed before be maintained; they ask only that the war be won, in order that the aims upon which the nation has set its heart can be realized.

This attitude of mind expresses itself in an enormous volume of demand for the things needed to prosecute war. The nation bids for these in great quantities. It would rather buy them cheaply than dearly, but buy them it must. It is this nature of war demand which gives it such great potency to raise prices. The end which the nation has set up for itself is an absolute one. When once war is undertaken, defeat must be prevented at any price. The forces which impel public opinion and dictate official action at such times are to a large degree emotional. If the commodity, or the service, is necessary for victory, it will be bought and paid for even though the price is far above the level which we have come to consider as "normal".

[fol. 13256] There is a second fundamental difference between the demand of government and that of the individual and its effect upon prices. The individual may desire a thing passionately. But if he lacks purchasing power, his demand will be ineffective. It will not influence price.

But the government of a wealthy industrial nation, such as the United States, is not seriously hampered by this problem. Its purchasing power has behind it the taxing power. Not only can it directly take the people's property and income by taxation, but it can pledge their future income for the purpose of borrowing from those who possess the power to buy things but do not choose to exercise it themselves.

Among the institutions which come to the assistance of government at such times are the banks. These institutions not only receive deposits which they may lend, but they also have the unique ability to manufacture purchasing power in the form of credit. They can then lend this credit to their governments and commonly do so at times of war. The banking situation of the United States is such that the power to buy and pay for goods is greater than the entire cost of any war which the United States has yet fought.

What we have then at the moment, is a situation in which the government of this country is making a demand upon our industries which has never been matched before. At the moment, although we are not actually at war, we are in an unlimited emergency and by reason of our defense effort we are getting the same economic results as though we were at war. And there is no doubt about our ability to obtain the purchasing power with which to make the demand of our government effective either at present or even at much higher prices.

A further characteristic of war demand for commodities and services is its immediacy. There is always great pressure for time. Under such conditions it may well be that in the long run prices would naturally be lower—but there is no time to wait for the long run. So it is the short run situation which governs.

[fol. 1825] For example, according to figures which have recently become available, the cost of constructing buildings at cantonments represents a large advance over what that cost would have been if it could have been carried

out at the ordinary rate of speed. This is one of the factors that contributes to the rise of prices in the early stages of war activity.

At present there is an ever mounting shortage in shipping. This has been accompanied by a rapidly mounting risk in all shipping operations. As a consequence, the cost of ocean shipping has multiplied greatly and this has increased certain prices.

These features of war demand are largely responsible for the increases in commodity prices which have been set forth in the tables shown earlier. The great increase in demand since war began in Europe has resulted in a large increase in industrial production in mines and manufactures. Their output has risen from 104 in August 1939 to 161 in August, 1941, according to the Federal Reserve Board index of physical volume of production. This index is based upon the average of the years 1935 to 1939 as 100. Factory payrolls rose from 91.2 in August 1939 to 152.5 in July, 1941. The national income for 1940, as computed by the Department of Commerce of the United States, was $76 billions. This is larger than it has been in any year since 1929, when it amounted to $82,885 millions. In 1941 it will exceed 1929 and will approach $90 billions.

This increase in productive activity and the rise of payrolls which accompanies it is, in turn, one of the causes which will bring about a further rise in prices. For it constitutes economic power in the hands of the workers who receive it and this swells the volume of new purchasing power that is offered on the market for commodities.

Under these conditions the only forces which can stop the rise in prices must operate on the supply side. Prices will not stay at their old level when demand increases unless [fol. 43252] additional goods can be produced so cheaply that they will continue to be offered at the old prices. Clearly, this will only happen if the cost of producing them is low enough so that they can continue to be sold at a profit at the former price. They will not be produced unless price is high enough to cover cost, including a profit.

The supply of goods will not be increased or even maintained unless this is the case.

There is no likelihood that costs of production will fall during the present war, nor for some years thereafter.

The principal items in the cost of manufactures are wages, taxes, and the maintenance and support of capital. The largest item or expense to the individual manufacturer is for materials. But the prices of these in turn resolve themselves into the costs of producing those materials. So for all manufactures, taken as a whole, the items of cost set forth above dominate prices.

The largest element in this cost is wages and salaries for they represent more than 75 per cent of the entire cost of converting materials into finished product. During 1940 the total contribution to the national income which originated in manufacturing amounted to $19,168 millions; and the wages and salaries paid by that industry were $15,218 millions or 80 per cent (Survey of Current Business, June 1941). There is no likelihood that these labor costs will increase.

The effect of war on wages is illustrated by what happened during the World War. When the war broke out in August, 1914, the weekly average earnings in New York State factories were $12.53. By September, 1915 they were $12.86, and by June, 1916 they had advanced to $14.40. By June, 1917 weekly wages in these factories had risen to $16.20. This was an increase of $3.24 or 25 per cent over September, 1915.

By November, 1918, when the armistice was declared, wages had risen $5.40 further to $21.60. This was an increase of 33⅓ per cent over June, 1917. And it was a total [fol. 13253] rise of 72 per cent above the level of August 1914.

We are using these figures for New York State for the wages of factory workers because there are no figures of

wages of factory workers available on a national scale for the period 1914 to 1920.

These figures were compiled and published by the New York State Department of Labor and are printed in its monthly publication, "The Industrial Bulletin," vol. 20, No. 1, January, 1941, page 19.

It is interesting to note several other facts about these weekly earnings. In the depression of 1921-1922, these wages never fell below $24.15 per week. From that point they rose to a high of $30.35 in March, 1929. In the depression of the 1930's they declined to a low of $20.73 in March, 1933; and by December, 1940 they had risen again to $30.01. In July, 1941 they were at $34.29, which is a new high for all time.

The chart (Exhibit B) which I prepared from these figures, shows the movement in these wages graphically. This graph is not an index number, but represents actual dollars earned per week, as is shown by the figures on the sides of the graph.

Wages did not stop rising with the armistice, but continued their advance in the post-war boom of 1919 and 1920 and finally reached $28.93 in October, 1920.

The general pattern of wage movements in the first World War, revealed by the graph (Exhibit B), may be summarized as follows:

There was, first of all, a period in which earnings were almost stationary. This lasted for a year and one-half after August, 1914. The average weekly earnings for 1915 were only 49 cents higher than in the last six months of 1914. In 1916 they recorded an advance of 12 per cent over 1915. In 1917 there was a 13.5 advance over 1916. Then, in 1918 the increase rose to 24 per cent.

The absolute rise in average weekly wages in each of [fol. 13254] these periods was as follows:

1914 to 1915	$0.40
1915 to 1916	1.58
1916 to 1917	1.94
1917 to 1918	3.98
(1914 to 1918)	$7.90
1918 to 1919	$3.15
1919 to 1920	4.65
(1918 to 1920)	$7.80
1914 to 1920	$15.70

These figures show strikingly how rapidly wages rose in the post-war inflationary period. The rise from 1914 to 1918 was 62 per cent; and the advance from 1918 to 1920 was as great as that of the war period.

In the present war, weekly earnings in New York State factories have increased 24.6 per cent in the twenty-three month period between August, 1939 and July, 1941. This exceeds their increase in the first twenty-three months of the first World War, in which period the increase was only 13 per cent. In the year which followed the first twenty-three months of the World War weekly earnings went up another 14.6 per cent. If such a rise occurs, it will put weekly earnings at $39.29 by July of next year. This would be $9.11 higher than they were in August, 1939, and will bring them 43 per cent above August, 1939 earnings.

A part of the rise which has already occurred since August, 1939 has been due to an increase in the number of hours worked. But there has also been an increase in hourly rates. In twenty-five manufacturing industries reported by the National Industrial Conference Board earnings per hour had increased 14 per cent over August, 1939 by July, 1941. The course of hourly earnings is shown in Exhibit C.

[fol. 13255] These hourly earnings, collected and compiled from twenty-five manufacturing industries by the

Conference Board are not from a single state, as were the New York State figures previously presented, but are nationwide.

I expect that these hourly earnings will increase more rapidly from now on, much as they did in the last war, after the spring of 1916, so that they will be up at least 20 per cent from the level of August, 1939 by a year from now.

The forces which are at present making for higher wages are clear and striking.

(1) First and foremosts is the fact of improved business. The index of industrial production stood at 156 for June, 1941. That is the highest level on record; and it is still expanding and business activity will grow more intense. This is going to be accompanied by a tight labor market. There is abundant evidence of this on every hand. The draft is withdrawing certain types of labor that compete in the labor market. This will make certain classes of labor harder to get. In fact, the draft is simply a complete new area of demand added to the labor field, and its effect in reducing supply will exert an upward pressure on wages.

(2) A second factor operating to increase wages is new in this country, as compared with previous war periods. This factor is organized labor, one of whose principal functions is to raise the rate of wages. This agency is much more powerful now than in the last war, or in any previous period of great business prosperity. In the five years which elapsed between June, 1936 and June, 1941, wages in New York State factories have risen $3.38, or 33.4 per cent. The labor union has a clearer notion of what it wants and how to get it than it ever had before. The events of recent months illustrate this anew.

The Exhibit illustrates what labor accomplished in the prosperity period of 1935 and 1937. Short as that period was, average hourly earnings rose 20 per cent during these three years. This was after they had already risen early in 1935, to the levels which prevailed in 1929.

[fol. 13256] Not only did thel have an astounding rise in the late months of 1936 and the first half of 1937, but they were maintained at this new level during the subse-

quent depression of late 1937 and 1938. In 1940 they started on a new rise which has been accelerated in 1941.

This rise will unquestionably continue, for all the forces which were at work in the field of wages in 1935 to 1937 are present in greatly accelerated form at this time.

One of the forces which has raised prices sensationally is the policy of our government to give the farmer a larger share in the national income by increasing the prices of his products through government assistance. Since the farmer does not labor for wages but sells the products which he grows on his farm, the only way of giving him more is by raising the prices of his products.

There is no doubt about the policy which will be followed in the field of farm prices. On May 26, 1941, the President signed legislation providing mandatory loans of 85 per cent of parity on five basic farm crops.

The President's statement at the time he signed the measure sets forth the purpose of this legislation:

"This is an effort to obtain farm prices which are nearer parity. It reflects the Government's objective of the last eight years. It reflects the fact that the farmers did not have and have not as great a share of the national income as other groups."

The Department of Agriculture estimated that food costs to consumers will be increased 10 per cent to 20 per cent.

The results of this action have been prompt and effective. When the drive for farm price parity started early in March of this year, the "foodstuffs" group in the price index for 28 basic commodities, which is based on August, 1939 as 100, stood at 120.2. By October 1, it had risen to 171.1. Cotton was at 118.4 per cent of its August 1939 price, and has risen to 160 per cent.

[fol. 13257] In the hearings on price control before the House Bank and Currency Committee proposals have been made to put a ceiling for farm products at 110 per cent of parity, and also to put a floor under some of the agricultural prices.

This, of course, raises the cost of living and so prompts the industrial worker to make new demands for higher wages. This results in higher production costs and a new increase in prices of manufactured products. This rise in prices of other products calls for a new increase in farm prices to bring them to parity, and the whole circle starts again.

Taxes and Prices.

One element in costs of production has not been considered. That costs is taxes. On the following page is a table showing the "Tax Collections in the United States," from 1913 to 1940, and an estimate for 1941 and 1942 on the assumption that the European war continues that long.

This Exhibit shows the enormous increase in taxes which took place in the World War and which is confronting us now. Taxes increased less than $1,000,000,000 (from $2,189,000,000 to $3,158,000,000) between 1913 and our entrance into the war in 1917. Of this increase only a little over one-third was in Federal taxes. In the three years after we entered the war taxes rose $6,000,000,000.

[fol. 18258] Tax Collections In The United States

1913 - 1942

(In Millions of Dollars)

Year June 30	Total Federal State and Local Tax Collections	National Income	Percent of Taxes to Nat'l Income
1913	$2,189	$31,450	6.96
1914	2,383	31,213	7.63
1915	2,487	32,533	7.61
1916	2,661	38,739	6.87
1917	3,158	46,376	6.81
1918	5,675	56,956	9.96
1919	7,423	62,945	11.79
1920	9,204	68,434	13.54
1921	8,800	56,689	15.52
1922	7,502	57,171	13.12
1923	7,234	65,662	11.02
1924	7,812	67,003	11.96
1925	7,884	70,051	11.25
1926	8,605	73,523	11.70
1927	9,059	73,966	12.25
1928	9,342	75,904	12.31

1929	9,759	79,498	12.28
1930	10,266	72,398	14.18
1931	9,300	60,203	15.45
1932	8,147	46,708	17.44
1933	7,501	44,713	16.77
1934	8,773	51,560	17.01
1935	9,731	56,254	17.30
1936	10,507	65,246	16.10
1937	12,473	69,419	17.97
1938	14,302	62,286	22.96
1939	13,850	69,400	19.96
1940	14,300	76,000	18.82
1941*	16,000	80,000	20.00
1942*	22,500	90,000	25.00

Note: *Estimated.
Source: National Industrial Conference Board.

[fol. 13259] The peak of taxes came in the fiscal year 1920 with collections of $9,204,000,000.

Neither Federal nor State and local tax ever reached as much as $2,000,000,000 in the years which followed 1920. Even in the low year of 1923 taxes only fell to $7,234,000,000. By 1930 they had reached more than $10,000,000,000, and by 1938 they had grown to $14,320,000,000 which is already $5,000,000,000 higher than the taxes of the peak year of World War I period.

The present indications are that the collections for the calendar year 1942 will be $22,500,000,000. This will be an increase of $8,500,000,000 over 1940, and will be about 25 per cent of the whole national income. This increase will certainly help to raise prices. In fact, a higher price level will be necessary to sustain a tax burden of this magnitude.

In view of all these factors, my opinion that the price level will be at or above 110 by June 30, 1942 is conservative, and is in line with the President's clear and emphatic statement of his viewpoint in his address of October 22, 1933, when he said:

"I do not hesitate to say, in the simplest, clearest language of which I am capable, that, although the prices of many products of the farm have gone up and although many farm families are better off than they were last year, I am not satisfied either with the amount or the extent of the rise, and that it is definitely a part of our policy to increase the rise and to extend it to those products

which have as yet felt no benefit. If we cannot do this one way, we will do it another. Do it we will * * *

"Finally, I repeat what I have said on many occasions, that ever since last March the definite policy of the Government has been to restore commodity price levels. The object has been the attainment of such a level as will enable agriculture and industry once more to give work to the unemployed."

In arriving at my opinion, I have taken cognizance of the fact that attempts are being made to control these prices and to insure that they shall rise in an orderly manner.

[fol. 13260] In my opinion, the price level will be kept from rising above 110 within the next year only because of these activities of the Government. Without these efforts to restrain runaway markets, prices would, in my opinion, rise higher than has been here indicated.

It must be kept in mind that a return to a price level of 100 is merely what has been considered normal and desirable, and is no ground for fear of inflation, which would be the ground for drastic restraint by the Government.

If the war in Europe continues beyond 1942, prices will rise above 110 on the Bureau of Labor Statistics index. How much they will rise will depend on our national policy with respect to the price of farm products, and to wages in industry, trade, and transportation. It is practically certain that taxes will continue to rise.

In my opinion, the rise of prices will be somewhat restrained by Government interference, as it was from June, 1917 to November, 1918. The total rise from the outbreak of World War I to the armistice, in November, 1918, was 102.5 per cent.

After the close of the war, it is my opinion that prices will rise as they did after the last war. By May, 1920 the Bureau of Labor Statistics price level was 22 per cent above November, 1918; and it was 148 per cent above August, 1914.

The more the purchase of goods is restrained by priorities during the continuation of hostilities, the greater will

be the demand for them after the war ends. If the plan for selling bonds to the great mass of the people succeeds, as it did during our participation in World War I, then the people who want these goods will get the purchasing power to buy them by selling their bonds as they did during 1919 and 1920. This demand will raise prices to higher levels.

[fol. 13261] If the war lasts to the end of 1943 the price level will certainly reach 150. It stood at 75 in August, 1939. In 1920 the price level rose to 167. The price level had been 67 in July, 1914. Prices did not recede to 67 in the depression of 1921-22. The lowest they got was 91.4 in January, 1922. They revived quickly and rose to 100.7 by the end of the year. This was practically 50 per cent above the pre-war level of 1914. They remained at that level throughout 1926. That year was finally adopted as 100 by the Bureau of Labor Statistics because prices seemed to have stabilized at about the level of that year.

There was a general belief in 1920 that prices would fall to the pre-war level as a result of the post-war readjustment. But nothing of the sort happened, as has just been shown above. The keys to this resistance of the price level to the post-war forces of price depression are the cost of living and the level of hourly wages. In the world war the costs of living followed the rise of prices but with some lag. It reached its peak in June, 1920 when it stood at 211 per cent of 1913, and at 206 of December, 1914.

Prices reached their high point at about the same time as the cost of living. But they stood at about 240 per cent of the 1913-14 level. But when prices fell from the high level to its low level of 91.4, the Bureau of Labor Statistics index of cost of living never fell below 118.7. Thus, the price level fell to 55 per cent of the peak of May 1920 and then leveled out at 60 per cent of that high point.

As contrasted with that drop, the lowest point to which the costs of living fell was 80 per cent of the peak, and it levelled out at 82 per cent. This was 70 per cent above the level during 1913-1914.

This comparison may be summarized by the statement that while prices settled down at 150 per cent of the pre-

war World War I level the cost of living remained at 170 per cent.

[fol. 13262] The course of wages has been discussed above, and it is shown graphically in Exhibits "B" and "C". That discussion shows that actual Hourly Earnings in Manufacturing never fell lower, even in 1921, than twice those of 1914. By 1929 they had risen to 240 per cent of 1914. Actual weekly earnings in 1921 were 187 per cent of 1914. In 1929 these had risen to 225 per cent of 1914.

In preparing the index number showing changes in the cost of living the Bureau of Labor Statistics uses the years 1935 to 1939 as 100. I have prepared a chart which shows the course of the cost of living in cities in the United States from 1913 to the present. On the same chart is shown the course of wholesale prices for the same years. This has been made from the Bureau of Labor Statistics' index of wholesale prices also converted to a 1935 to 1939 base.

The graph marked Chart "D" shows that the great advance in prices from 1915 to 1920 raised the cost of living. But the subsequent decline in prices did not depress the cost of living in the same degree. From 1921 to 1939 the two had variations which were in close correspondence. Prices were the most volatile of the two, and in the depression period of 1931 to 1935 prices overcame the inertia of the cost of living and pulled it down.

But upon the whole it is a factor which has the effect of sustaining wages and so maintaining costs at a level which serves as a floor for prices.

At the present time prices have again risen above the costs of living and wages are rising rapidly. In my opinion this will again produce a level in the cost of living which will sustain wages and the price of products above the level of August, 1939, and above the prices which now prevail. It is my opinion that if the general Bureau of Labor Statistics price index goes to 150 after the close of the war prices will stabilize at about 120 after the period of post-war readjustment.

[fol. 13264] For Immediate Release
September 25, 1941
(12729)

U. S. Department of Labor
Bureau Of Labor Statistics
Washington

Wholesale Prices For Week Ended September 20, 1941.

The reaction in agricultural markets brought the Bureau of Labor Statistics' index of wholesale prices of nearly 900 series down slightly by 0.1 percent during the week ended September 20, Acting Commissioner Hinrichs reported today (Thursday). "At 91.5 percent of the 1926 average, the general level of commodity prices in wholesale markets is 1.7 percent higher than last month and 17.8 percent above a year ago," Mr. Hinrichs said.

Average wholesale prices for farm products dropped 0.4 percent and food prices 0.7 percent during the week. Both groups are substantially higher than in 1940—farm products by 39 percent and food prices by 24½ percent. Prices for all grains, except barley, fell sharply and quotations were also lower for cotton, eggs, onions, and potatoes. Weakening prices for steers and lambs brought the average for livestock and poultry down 0.3 percent. Meats declined 2.1 percent. Quotations were also lower for fresh beef at New York, and fresh pork and lamb. Higher prices were reported for calves, live and dressed poultry, cured pork, and for hay, tobacco, and wool. There were further advances for butter, cheese, most canned and dried fruits, sweet potatoes; coffee, oleo oil, edible tallow, and refined soy bean oil.

Textile products and chemicals and allied products continued to rise, both advancing by 0.6 percent during the week. Quotations were higher for cotton goods such as denim, ticking, tire fabrics, and cotton yarn, and for rayon yarns, and raw jute. Sharp increases occurred in prices for certain industrial chemicals, including denatured alcohol, salt cake, zinc chloride, phosphates, synthetic camphor, and for fats and oils.

Hides rose more than 3 percent and prices for leather, shoes and luggage also advanced. Coal and petroleum products continued to rise.

The lumber index rose 0.9 percent because of higher quotations for most types of Douglas fir and for yellow pine drop siding, and timbers. Maple and oak flooring declined and lower prices were also reported for yellow pine boards, finish and flooring. Turpentine declined 4.4 percent during the week, while linseed oil advanced.

The following tables show (1) index numbers for the principal groups of commodities for the past 3 weeks, for August 23, 1941 and for September 21, 1940 and the percentage changes from a week ago, a month ago, and a year ago (2) percentage changes in subgroup indexes from September 13 to September 20, 1941.

Panhandle Eastern Pipe Line Company and Subsidiary Companies.

Deduction From Cost of Reproduction New For Depreciation and Present Value of Plant, Property and Business as of June 30, 1941.

P. McDonald Biddison, Consulting Engineer
Dallas, Texas.

[fol. 13271]

P. McDonald Biddison
Consulting Engineer
Dallas Gas Building
Dallas, Texas

September 30, 1941.

Panhandle Eastern Pipe Line Company
90 Broad Street
New York, N. Y.

Attention: Mr. J. D. Creveling, President

Gentlemen:

I have made an estimate, based upon an inspection, of the amounts to be deducted from my estimate of Cost of Reproduction New as of June 30, 1941, of the consolidated Plant, Property and Business of Panhandle Eastern Pipe Line Company and Subsidiary Companies (Report of August 26, 1941) for depreciation that has occurred in the property. The total of the amount is $4,121,749.80, result-

ing in a Present Value of $79,711,698.74 as detailed in subsequent pages hereof.

Yours very truly,

(Seal)

P. McDONALD BIDDISON,
Consulting Engineer.

PMcDB/1F

Panhandle Eastern Pipe Line Company And Subsidiary Companies

Present Value Of Plant, Property And Business
As Of June 30, 1941

General Information Covering Each Company as to the Nature and Size of the Business and the Territory Served F

I. Water Companies

1. Bridgeport Hydraulic Company
2. Elizabethtown Water Company, Consolidated
3. Hackensack Water Company
4. Middlesex Water Company
5. New Haven Water Company
6. Plainfield Union Water Company
7. Stamford Water Company

II. Electric Utility Operating Companies

1. Bangor Hydro Electric Company
2. Boston Edison Company
3. Central Hudson Gas & Electric Corporation
4. Cleveland Electric Illuminating Company (The)
5. Commonwealth Edison Company
6. Connecticut Power Company (The)
7. Consolidated Edison Company of New York, Inc.
8. Consolidated Gas, Electric Light & Power Company of Baltimore
9. Detroit Edison Company
10. Duke Power Company
11. Hartford Electric Light Company (The)
12. Pacific Gas & Electric Company
13. Pennsylvania Water & Power Company
14. Southern California Edison Company, Ltd.
15. Tampa Electric Company

III. Manufactured and Mixed Gas Companies

1. Bridgeport Gas Light Company
2. Brooklyn Union Gas Company
3. Elizabethtown Consolidated Gas Company
4. Hartford Gas Company
5. Laclede Gas Light Company
6. Peoples Gas Light & Coke Company
7. Providence Gas Company
8. Seattle Gas Company
9. Springfield (Mass.) Gas Light Company
10. Washington Gas Light Company

IV. Natural Gas Companies

1. Arkansas Louisiana Gas Company

[fol. 13325] IV. Natural Gas Companies (continued)

2. Atlantic Seaboard Corporation
3. Cabot, Inc., Godfrey L.
4. Canadian River Gas Company

5. Carnegie Natural Gas Company
6. Chicago District Pipeline Company
7. Cincinnati Gas Transportation Company
8. Cities Service Gas Company
9. Colorado Interstate Gas Company
10. Consolidated Gas Utilities Corporation
11. East Ohio Gas Company
12. El Paso Natural Gas Company
13. Hope Natural Gas Company
14. Houston Natural Gas Corporation
15. Interstate Natural Gas Company, Inc.
16. Kentucky West Virginia Gas Company
17. Lone Star Gas Corporation
18. Manufacturers Light and Heat Company
19. Memphis Natural Gas Company
20. Michigan Gas Transmission Corporation
21. Mississippi River Fuel Corporation
22. Montana-Dakota Utilities Company
23. Mountain Fuel Supply Company
24. National Fuel Gas Company
25. Natural Gas Company of West Virginia
26. Natural Gas Pipeline Company of America
27. New York State Natural Gas Corporation
28. Northern Natural Gas Company
29. North Penn Gas Company
30. Ohio Fuel Gas Company
31. Oklahoma Natural Gas Company
32. Pacific Lighting Corporation
33. Panhandle Eastern Pipe Line Company
34. Peoples Natural Gas Company
35. Pittsburgh and West Virginia Gas Company
36. Southern Natural Gas Company
37. South Penn Natural Gas Company
38. Texoma Natural Gas Company
39. United Fuel Gas Company
40. United Gas Pipe Line Company

41. Virginia Gas Transmission Corporation
42. Warfield Natural Gas Company
43. West Texas Gas Company

[fol. 13327] Statement of Experience and Qualifications

of

Paul B. Coffman

1. Name, Address and Age

Paul B. Coffman, 222 Sylvania Place, Westfield, N. J., Age 40.

2. Education

Graduate of Ohio State University, 1923, with degree of Bachelor of Science; graduate of Harvard University Graduate School of Business Administration, 1926, with degree of Master of Business Administration.

3. Present Position

Vice President, in charge of Research and Valuation, and Director, of Standard & Poor's Corporation (recently formed as a consolidation of Standard Statistics Company, Inc. and Poor's Publishing Company), a corporation engaged, among other things, in gathering, collating, analyzing and disseminating statistical and general information on all phases of business, industry and investments and offering professional, industrial consulting, valuation and research services.

4. Experience and Qualifications

Upon graduation in 1926 from Harvard University I became Professor of Economics and Accounting at the College of William and Mary, Williamsburg, Virginia. In September 1927, I returned to the Harvard Graduate School of Business Administration, where I joined the Faculty and became an assistant professor and tutor and remained until the end of 1936. The particular subjects I taught were accounting, corporate management and business policy.

[fol. 13328] While teaching at the Graduate School of Business Administration at Harvard University, I also

served as consulting economist for a number of industrial and financial advisory corporations, including both Standard Statistics Company, Inc., with which I became associated in 1928, and Poor's Publishing Company, publisher of Poor's Manuals, with which I became associated in 1931, and which are the predecessor companies of the present Standard & Poor's Corporation. During 1931 and 1932 I served as Executive Vice President and General Manager of Poor's Publishing Company. Also, I was collaborator on several books of accounting and business policy and author of several articles.

Over a period of years I have been retained to make investigations upon a large number of diversified situations, many of which required that I present my analysis and testify as to my conclusions before the courts, the Internal Revenue Department, the Board of Tax Appeals, and several regulatory bodies, such as, the Civil Aeronautic Authority, State Public Utility Commissions and the Federal Power Commission.

[fol. 13330] Written Statement Of Paul B. Coffman

1. Purpose of This Exhibit.

In August of this year, Standard & Poor's Corporation (through Paul B. Coffman, Vice-President and Director of this Company) was retained by the Panhandle Eastern Pipe Line Company to make a study relative to a fair rate of return on capital invested in that company. Data covering such study are contained in a separate volume.

As a collateral part of such undertaking, however, a statistical study was made to determine the investors' appraisal of the risks of capital invested in the natural gas pipe line business as compared with the risk of capital invested in other utility industries. Such study covered the following utility classifications, namely, (a) water companies, (b) electric utility operating companies, (c) manu-

factured and mixed gas companies, (d) natural gas companies and (e) natural gas pipe line companies. The telephone industry, which is logically a division of the utility industry, was excluded inasmuch as it was so largely dominated by the American Telephone and Telegraph Company system and market prices for many of the securities of the underlying operating companies were not obtainable.

This exhibit presents the findings that resulted from such investigation.

[fol. 13331] Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as Compared With Other Divisions of the Utility Industry.

1. Method of Procedure

A group of companies in each of the utility classifications were selected on bases which will be described below. Statement F of this exhibit contains a general description of the business of each of the companies and the territory in which it operates.

The general method of procedure as to each company and group of companies involved four steps, as follows:

(1) For the years 1937, 1938, 1939 and 1940, the indicated total market value of all of the securities of a single company was determined by taking the sum of the amounts produced by multiplying the number of each class of security (bonds, preferred and common stocks as the case may be) outstanding at the end of each year by the average of its high and low market quotations in that year. For the interim period of 1941, January-August, both inclusive, the same procedure was followed excepting that the latest record of securities outstanding and the average of the high and low market quotations for the period were used.

[fol. 13332] Examples:

A. Indicated Market Value of the Securities Outstanding of the Boston Edison Company for 1940

	Capital Outstanding Dec. 31, 1940	1940 Market Prices High	Low	Average	Indicated Market Value
Capital Stock ($25 par)	2,468,656 shs.	36¾	30⅜	33.75	$ 83,317,140
1st Mortgage Bonds 2¾s 1970	$53,000,000	—	—	*103.53	54,870,900
				Total	$138,188,040

Note: *Offering price of $103.53 used since issue was sold on December 10, 1940.

B. Indicated Market Value of the Securities Outstanding of the Boston Edison Company for the Interim Period of 1941, January-August, Both Inclusive

	Capital Outstanding Dec. 31, 1940	Jan. 1, to Aug. 31, 1941 Market Prices High	Low	Average	Indicated Market Value
Capital Stock ($25 par)	2,468,656 shs.	34¾	26⅝	30.69	$ 75,763,053
1st Mortgage Bonds 2¾s 1970	$53,000,000	104⅜	101	102.69	54,425,700
				Total	$130,188,753

(2) Next there was determined for the individual company the total earnings available for distribution to the securities after taxes, depreciation and all other miscellaneous charges, as reported in the particular company's reports to stockholders. For the years 1937, 1938, 1939 and 1940, earnings as shown in the published annual reports for the years in question were used. For the interim period of 1941, January-August, both inclusive, the [fol. 13333] latest reported earnings covering a twelve month period were used, the dates of which are clearly indicated in the statements at the end of this exhibit.

Examples:

A. The consolidated earnings of the Boston Edison Company for 1940 available for its capital after taxes, de-

preciation and other miscellaneous charges, as shown in the published report to its stockholders for 1940, were $7,730,837.

B. For the interim period of 1941, January-August, both inclusive, the latest reported earnings for this particular company covered the twelve months ended June 30, 1941 and were $7,703,746, as computed from the interim report to stockholders.

(3) The earnings so determined under (2) A and B were then divided by the indicated market value of all securities as determined under (1) A and B respectively, and a rate for the period in question was thus obtained.

Examples:

A. In the case of the Boston Edison Company for the calendar year of 1940, dividing the consolidated earnings available for capital, in the amount of $7,730,837, as shown above, by the indicated market value of all capital of $138,188,040, gives a percentage of 5.59 per cent., which, in my opinion, fairly indicates the investors' appraisal of the risks of capital employed in that enterprise for the year 1940.

B. Applying the same formula to the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital employed in that enterprise for the period in question is indicated at 5.92 per cent.

(4) Having determined in the manner described above the investors' appraisal of the risks of capital employed in each company selected, the indicated market value of the companies in each group determined under (1) A and B above, was added to obtain the indicated market value of the capital securities of the entire group. Similarly, the earnings available for distribution to the securities of [fol. 13334] each of the companies, as determined under (2) A and B above, were added to obtain the total earnings available for distribution to securities of the entire group. The latter figure was then divided by the former in order to obtain the investors' overall appraisal of the risks of all capital in the group. This was done for each of the years

1937, 1938, 1939 and 1940, and for the interim period of 1941, January-August, both inclusive.

The results of such computations for the years 1937, 1938, 1939 and 1940 appear as Statements A to E of this exhibit. Statements A-1 to E-1 present such data for the interim period of 1941, January-August, both inclusive.

The complete working papers upon which these statements are based are presented in Appendix C of the accompanying book of tables.

2. Analysis of Data on Water Companies

[fol. 13335] A list of all operating companies engaged solely in the water business was first prepared from Standard Corporation Records and appears on pages 1 and 2 of Appendix A in the accompanying book of tables. From this list of 72 companies, eliminations were made for the following reasons:

(1) Companies whose common stocks were held by one of the larger holding companies, such as American Water Works & Electric Company, the Federal Water Service Corporation and the Community Water Service Company, and whose stocks had no obtainable market evaluation.

(2) Companies whose stocks were closely held by relatively few individuals and had no available market evaluation.

(3) Companies whose 1940 gross operating revenues were less than $500,000. This latter class was not deemed of sufficient importance to be included in the study.

The result of these eliminations in the overall list was the following group of seven water companies:

Bridgeport Hydraulic Company
Elizabethtown Water Company, Consolidated
Hackensack Water Company
Middlesex Water Company
New Haven Water Company
Plainfield-Union Water Company
Stamford Water Company

For each of these companies and for the group of companies, for each of the years 1937, 1938, 1939 and 1940, and for the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital as a percentage was obtained by application of the method fully described in Section 1 above.

The actual results of these determinations for the group of water companies are presented in the following table:

[fol. 13336]

Determination of Investors' Appraisal of Risks of Capital for Water Company Securities

	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937	$79,750,400	$4,410,321	5.53%
1938	78,545,433	4,114,060	5.24%
1939	79,635,529	4,494,594	5.64%
1940	83,244,017	4,272,794	5.13%
Interim Period Jan.-Aug. 1941	81,816,519	4,289,313	5.24%

In other words, this analysis indicated that investors appraised the risks of capital invested in water companies as a group in 1937, 1938, 1939 and 1940 respectively, at 5.53 per cent, 5.24 per cent, 5.64 per cent and 5.13 per cent, or an average of the four years of 5.38 per cent.

On the basis of data available for the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital in this industry was 5.24 per cent.

Supporting data on each of the companies mentioned and for each of the years studied, as well as total figures for the group, are presented in Statements A and A-1 at the end of this exhibit.

3. Analysis of Data on Electric Utility Operating Companies

[fol. 13337] From an "Alphabetical List of Telephone, Electric and Gas Utility Common Stocks Considered in the Course of the Study of Certain Factors Influencing Investors' Appraisals of Risk Characteristics," carried as Schedule 9 of a Federal Communications Commission publication issued June 15, 1938 and entitled "The Problem of the 'Rate of Return' in Public Utility Regulation," were

selected all electric operating utility companies whose common stocks were outstanding in the hands of the public to the extent of at least five per cent.

The complete list of 40 telephone, electric and gas companies, included in the above-cited Schedule appears as page 3, Appendix A, in the accompanying book of tables. As shown in such Appendix, eliminations were made for the following reasons:

(1) Companies whose revenues were derived primarily from telephone service.

(2) Companies whose revenues were derived primarily from gas service.

(3) Companies whose common stocks were outstanding in the hands of the public to an extent less than five per cent.

(4) Companies which were primarily holding companies.

The result of these eliminations from the overall list was the following group of fifteen electric utility operating companies:

Bangor Hydro-Electric Company
Boston Edison Company
Central Hudson Gas & Electric Company
Cleveland Electric Illuminating Company
Commonwealth Edison Company
Connecticut Power Company
Consolidated Edison Company of New York
Consolidated Gas, Electric Light & Power Company of Baltimore
Detroit Edison Company
Duke Power Company
Hartford Electric Light Company
Pacific Gas & Electric Company
[fol. 13338] Pennsylvania Water & Power Company
Southern California Edison Company, Ltd.
Tampa Electric Company

The method of determining the investors' appraisal of the risks of capital in this division of the utility industry

was the same as that previously described in Section 1 above.

The actual results of these determinations for the group of electric utility operating companies are presented in the following table:

Determination of the Investors' Appraisal of Risks of Capital for Electric Utility Operating Companies

	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937	$3,813,738,284	$208,472,836	5.47
1938	3,691,943,124	203,823,995	5.52
1939	3,963,437,231	214,605,674	5.42
1940	3,963,963,605	216,540,166	5.46
Interim Period Jan.-Aug., 1941	3,816,860,487	214,245,818	5.61

In other words, this analysis indicated that investors appraised the risks of capital invested in electric operating utility companies as a group in 1937, 1938, 1939 and 1940, respectively, at 5.47 per cent, 5.52 per cent, 5.42 per cent and 5.46 per cent, or an average for the four years of 5.47 per cent.

On the basis of data available for the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital in this industry was 5.61 per cent.

Supporting data on each of the companies mentioned and for each of the years studied, as well as total figures for the group, are presented in Statements B and B-1 at the end of this exhibit.

4. Analysis of Data on Manufactured and Mixed Gas Companies

[fol. 13339] A list was prepared of all operating companies distributing manufactured or mixed gas from Standard Corporation Records and appears on pages 4 and 5, Appendix A in the accompanying book of tables. From this list of companies, eliminations were made for the following reasons:

(1) "Companies whose stocks were controlled completely, or practically so, by a holding company and for which there was no market evaluation.

(2) Companies whose gross revenue was predominantly obtained from services other than the distribution of manufactured and/or mixed gas.

(2) Companies with gross revenues in 1940 of less than $1,000,000, because these were too small to have any important bearing on the final results.

The result of these eliminations was the following ten manufactured and mixed gas companies:

Bridgeport Gas Light Company.
Brooklyn Union Gas Company.
Elizabethtown Consolidated Gas Company.
Hartford Gas Company.
Laclede Gas Light Company.
Peoples Gas Light & Coke Company.
Providence Gas Company.
Seattle Gas Company.
Springfield Gas Light Company.
Washington Gas Light Company.

The method of determining the investors' appraisal of the risks of capital in this division of the utility industry was that previously described in Section 1 above.

The actual results of these determinations for the group of manufactured and mixed gas companies are presented in the following table:

[fol. 13340] Determination of the Investors' Appraisal of the Risks of Capital for Manufactured and Mixed Gas Companies

	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937	$284,278,897	$17,398,250	6.12
1938	243,001,879	16,341,221	6.72
1939	262,358,022	17,630,133	6.72
1940	262,719,698	18,001,079	6.89
Interim Period Jan.-Aug. 1941	267,129,045	18,817,497	7.04

In other words, the analysis indicated that investors appraised the risks of capital invested in manufactured

and mixed gas companies in 1937, 1938, 1939 and 1940, respectively, at 6.12 per cent, 6.72 per cent, 6.72 per cent and 6.89 per cent, or an average for the four years of 6.61 per cent.

On the basis of data available for the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital in this industry was 7.04 per cent.

Supporting data on each of the companies mentioned and for each of the years studied, as well as total figures for the group, are presented in Statements C and C-1 at the end of this exhibit.

5. Analysis of Data on Natural Gas Companies

[fol. 13341] The list of natural gas companies from which selections were made to determine the investors' appraisal of risks of capital for this industry was the same as that prepared by Mr. Charles W. Knapp, Jr., of the Federal Power Commission, in an exhibit entitled "Rate of Return", which was submitted in the Hope Natural Gas Company hearings. This list was used since it appeared to be fully representative of the industry. Mr. Knapp testified that

"in preparing this list an attempt was made to include all natural gas companies which had the following characteristics:

(1) Companies engaged in the production and transmission of natural gas and sales thereof at wholesale and to main-line industrial customers.

(2) Companies engaged in the transmission of natural gas and sales thereof at wholesale and to main-line industrial customers.

(3) Companies such as those described in (1) and (2) above which also conduct retail distribution operations.

(4) Companies so engaged which have annual operating revenues of $2,000,000 or more."

Data showing the total securities outstanding of these 43 companies, as well as the amount of such securities held by the public, by institutions or by affiliates, are shown in

Appendix B, pages 1 to 10, in the accompanying book of tables. The grand total of such securities so classified appears in the following table:

[fol. 13342]

Grand Total of Securities of 43 Natural Gas Companies Which Appear to be Fully Representative of the Industry

	Total Outstanding Securities	Held by Public	Held by Institutions	Held by Affiliates
Bonds	$248,242,000	$ 96,771,000	$ 87,464,000	$ 64,007,000
Debentures	44,400,000	—	900,000	43,500,000
Notes	120,692,935	33,548	94,437,500	26,221,887
Advances	59,380,500	—	—	59,380,500
Total	$472,715,435	$96, 804,548	$182,801,500	$193,109,387
Preferred Stock	98,776,810	63,115,810	—	35,661,000
Common Stock	610,281,266	206,379,521	451,697	403,450,048
Grand Total	$1,181,773,511	$366,299,879	$183,253,197	$632,220,435

As shown by the above table, the total of outstanding securities at book values was $1,181,773,511, of which $610,281,266, or 51.6 per cent, was represented by common stocks, $98,776,810, or 8.4 per cent, by preferred stocks, and $472,715,435, or 40.0 per cent, by bonds, debentures, notes and advances.

The table also discloses that of the total securities outstanding, $366,299,879, or 31.0 per cent, was outstanding in the hands of the public, $183,253,197, or 15.5 per cent, was held by institutions, with the remaining $632,220,435, or 53.5 per cent, held by affiliated companies.

From this original list of 43 companies were eliminated all companies whose common stocks were not outstanding in the hands of the public and for which an investment appraisal of this portion of capital was not obtainable. After giving effect to these eliminations, which are shown in Appendix A, page 6, in the accompanying book of tables, the following 13 companies remained:

[fol. 13343] Consolidated Gas Utilities Corporation
El Paso Natural Gas Company
Houston Natural Gas Corporation

Interstate Natural Gas Corporation
Lone Star Gas Corporation
Memphis Natural Gas Company
Montana-Dakota Utilities Company
Mountain Fuel Supply Company
National Fuel Gas Company
Oklahoma Natural Gas Company
Pacific Lighting Corporation
Panhandle Eastern Pipe Line Company
Southern Natural Gas Company

The aggregate book value of the securities outstanding of these 13 companies, as well as data showing the ownership of such securities, is shown in the following table:

Total Securities Outstanding of 13 Natural Gas Companies Upon Which Investors' Appraisals of the Risks of Capital Have Been Computed

	Total Outstanding Securities	Held by Public	Held by Institutions	Held by Affiliates
Bonds	$124,771,000	$93,926,000	$30,845,000	$ —
Debentures	900,000	—	900,000	—
Notes	51,021,048	33,548	50,987,500	—
Advances	—	—	—	—
Total	$176,692,048	$93,959,548	$82,732,500	$ —
Preferred Stock	73,504,719	62,504,710	—	11,000,000
Common Stock	242,695,764	206,379,521	—	36,316,243
Grand Total	$492,892,522	$362,843,779	$82,732,500	$47,316,243

The aggregate book value of securities of the 13 companies used to determine investors' appraisal of the risks of capital for the natural gas industry was $492,892,522, or 41.7 per cent of the aggregate book value of all 43 natural gas companies. The percentage distribution in various types of securities was 49.2% in common stocks, 14.9% in preferred stock and 35.9% in debt composed of bonds, [fol. 13344] debentures, notes and advances.

All of the outstanding securities of these 13 companies were not held by the public. Owing to the practice in recent years of selling many senior issues privately, $82,732,500, or 46.8 per cent of the total debt outstanding was held

by institutions. In such cases it was necessary to estimate the investors' appraisal of this particular portion of the capital. However, the possible margin of error in making such estimate was very small in view of available data on original offering prices and the subsequent trend of quotations for publicly held securities.

Likewise, $11,000,000, or 15.0 per cent, of the total preferred stock outstanding was held by affiliated companies. This amount was represented by the two issues of preferred stock of the Panhandle Eastern Pipe Line Company which were outstanding in the name of Gano Dunn, Trustee for Columbia Oil & Gasoline Corporation. Here again, estimates had to be made of the investors' appraisal of these particular securities, but the margin of error in making such estimates on stocks calling for a fixed dividend payment obviously could not be great.

Of the common stocks, $36,316,243, or 15.0 per cent of the total book value of common stock of the 13 companies, was also held by affiliates. In no case, however, did affiliated companies own 100% of the outstanding common stock of any particular company and therefore the investors' appraisal of the common stocks as indicated by the record of price quotations on the publicly held portions of the issues were used to determine the aggregate value of all the stock outstanding.

[fol. 13345] The procedure followed in determining the investors' appraisal of the risks of capital in the natural gas division of the utility industry was that previously described in Section 1 above.

The actual results of these determinations for the group of natural gas companies are presented in the following table:

Determination of the Investors' Appraisal of the Risks of Capital for National Gas Companies

	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937	$490,968,147	$38,321,861	7.81%
1938	444,508,937	34,158,780	7.68
1939	541,190,084	41,120,890	7.60
1940	535,528,213	43,004,588	8.03
Interim Period Jan.-Aug., 1941	542,388,315	43,774,736	8.07

In other words, this analysis indicated that investors appraised the risks of capital invested in natural gas companies in 1937, 1938, 1939 and 1940, respectively, at 7.81 per cent, 7.68 per cent, 7.60 per cent and 8.03 per cent, or an average for the four years of 7.78 per cent.

On the basis of the data available for the interim period of 1941, January-August, both inclusive, the investors' appraisal of the risks of capital in this industry was 8.07 per cent.

Supporting data on each of the companies mentioned and for each of the years studied, as well as total figures for the group, are presented in Statements D and D-1 at the end of this exhibit.

Included in the 13 natural gas companies listed above were the following pipe lines companies:

El Paso Natural Gas Company
Interstate Natural Gas Company
Memphis Natural Gas Company
Panhandle Eastern Pipe Line Company
Southern Natural Gas Company

[fol. 13346] These companies were comparable from the viewpoint that in all cases revenue was derived principally from the transportation of gas through a long pipe line. In no case was the ultimate distributing system operated by the pipe line company.

The results of combining available data for the five pipe line companies only are presented in the following table:

Determination of the Investors' Appraisal of the Risks of Capital for Natural Gas Pipe Line Companies

	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937*	$84,303,145	$8,115,489	9.63%
1938*	78,363,890	7,460,403	9.52
1939	157,082,439	13,890,981	8.84
1940	151,452,439	14,460,549	9.55
Interim Period Jan.-Aug., 1941	157,295,131	14,926,344	9.49

Note: * Data for the Panhandle Eastern Pipe Line Company can not be computed for these years since no part of the common stock was outstanding in the hands of the public.

In other words, this analysis indicated that investors appraised the risks of capital invested in natural gas pipe line companies in 1937, 1938, 1939 and 1940, respectively, at 9.63 per cent, 9.52 per cent, 8.84 per cent and 9.55 per cent, or an average for the four years of 9.38 per cent.

On the basis of the data available for the interim period of 1941, January to August, both inclusive, the investors' appraisal of the risks of capital for pipe lines companies was 9.49 per cent.

Supporting data on each of the companies mentioned in this group are presented in Statements E and E-1 at the end of this exhibit.

Included among the five natural gas pipe line companies was the Panhandle Eastern Pipe Line Company. For this [fol. 13347] company alone, the determination of the investors' appraisal of the risks of capital is presented in the following table:

Determination of the Investors' Appraisal of the Risks of Capital of the Panhandle Eastern Pipe Line Company

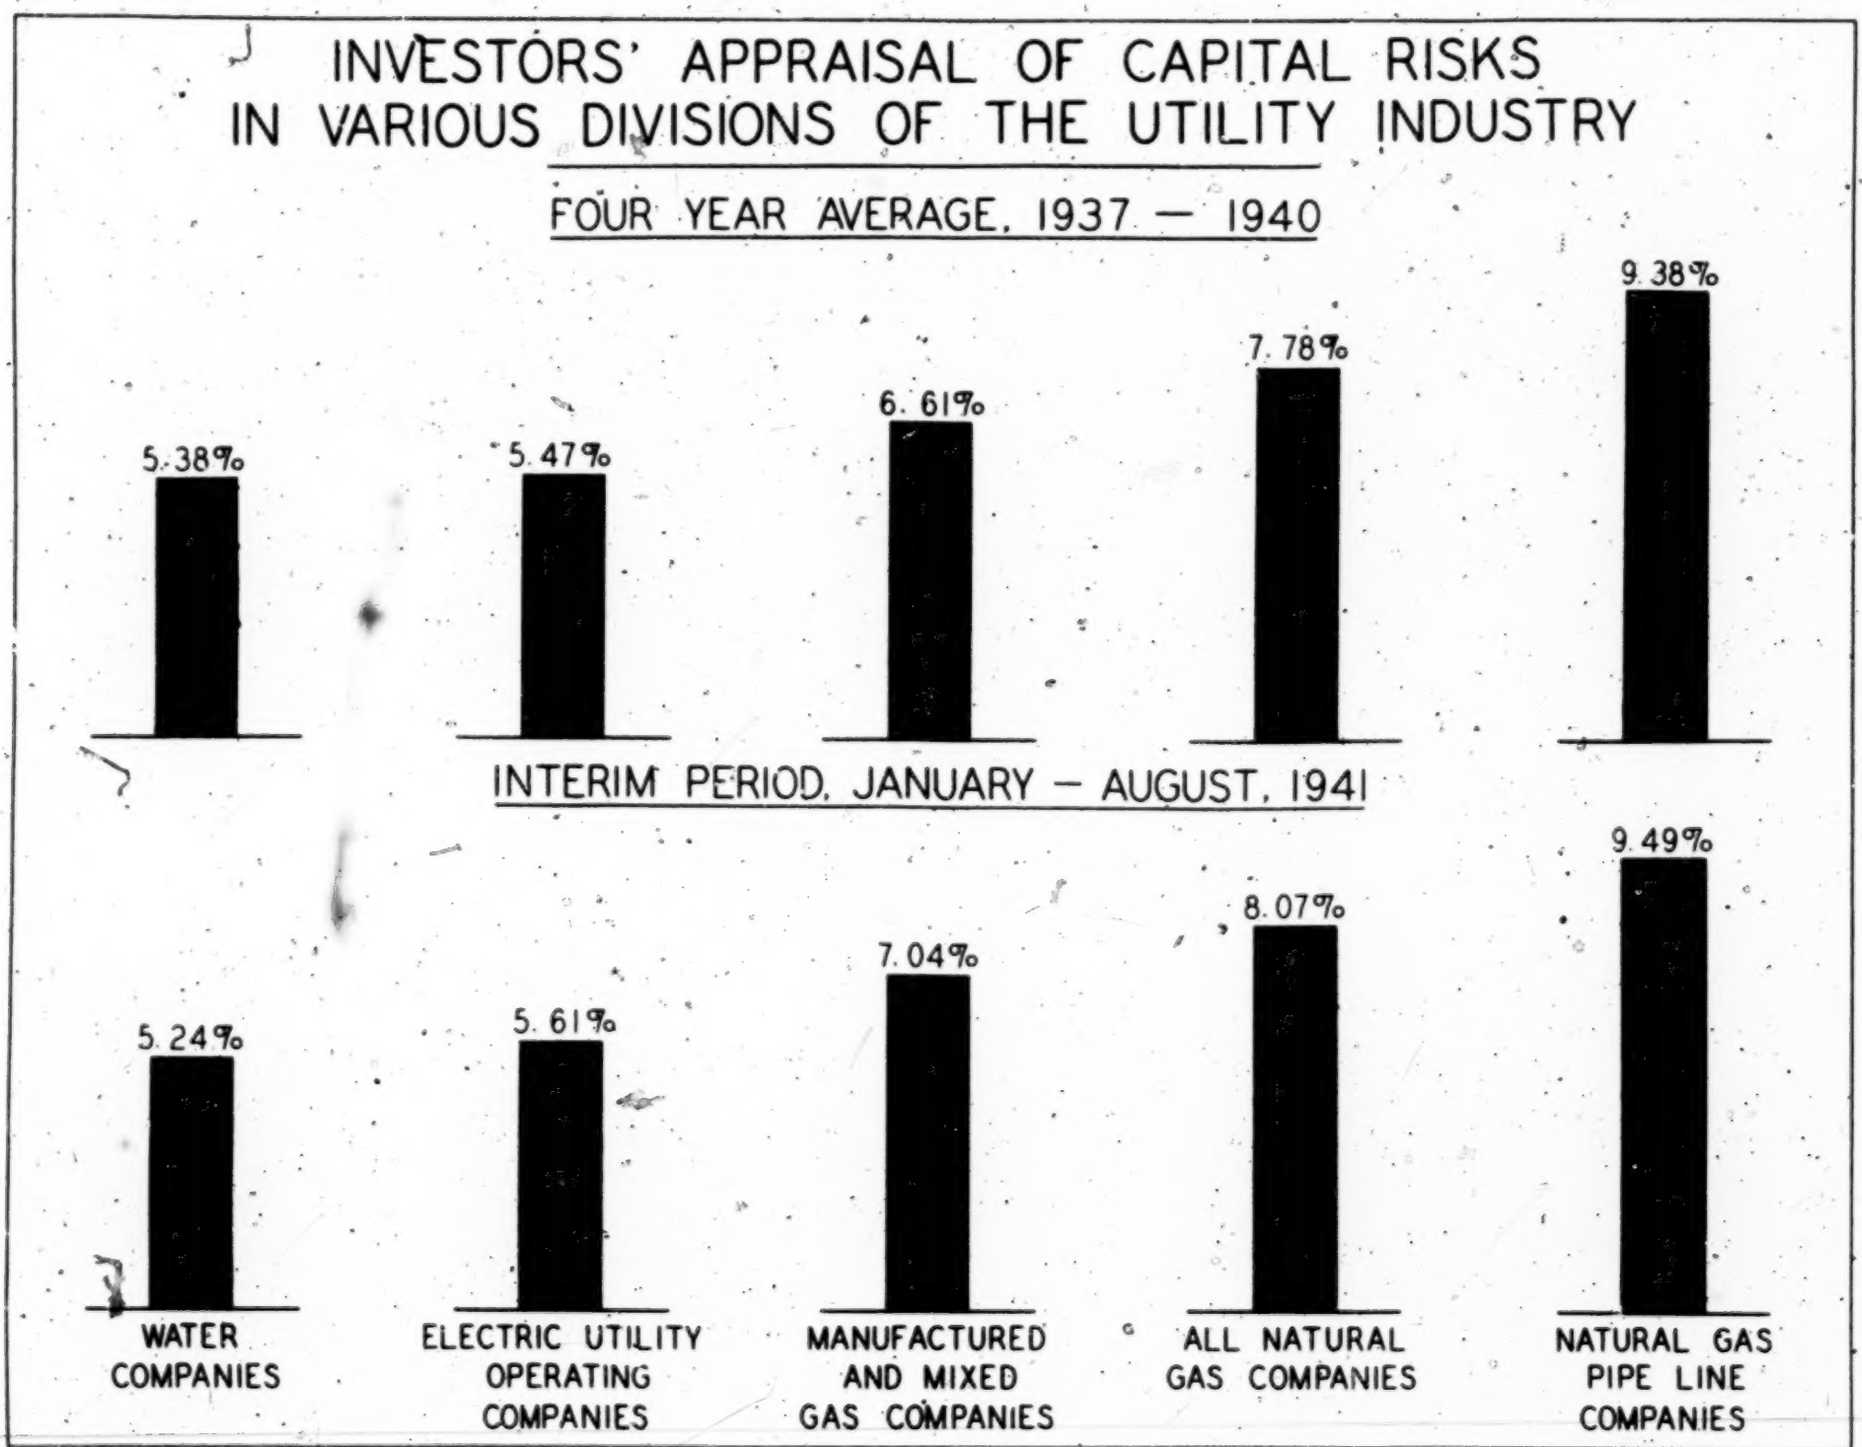
	Total Indicated Market Value of Capital	Total Earnings Available for Capital	Investors' Appraisal of Risks of Capital
1937*	$	$	—%
1938*			
1939	66,681,671	5,601,585	8.40
1940	58,156,283	5,761,686	9.91
Interim Period Jan.-Aug., 1941	64,219,240	5,843,430	9.10

Note: * Data for the Panhandle Eastern Pipe Line Company can not be computed for these years since no part of the common stock was outstanding in the hands of the public.

In other words, this analysis indicated that investors appraised the risks of capital in the Panhandle Eastern Pipe Line Company in 1939 and 1940, respectively, at 8.40 per cent and 9.91 per cent, or an average for the two years of 9.15 per cent.

On the basis of the data available for the interim period of 1941, January to August, both inclusive, the investors' appraisal of the risks of capital for this company was 9.10 per cent.

INVESTORS' APPRAISAL OF CAPITAL RISKS IN VARIOUS DIVISIONS OF THE UTILITY INDUSTRY



6. Summary of Analyses:

[fol. 13349] The foregoing analyses indicate most clearly that the percentages representing the investors' appraisal of the risks of capital invested in the various divisions of the utility industry analyzed, increased as the risks of the particular utility division increased. In order that this may be seen clearly, the summary figures are presented in the table below and graphically on the accompanying chart.

Investors' Appraisal of Capital Risks in Various Divisions of the Utility Business

	1937	1938	1939	1940	Four-Year Average 1937-40	Interim Period Jan.-Aug. 1941
Water Companies	5 53%	5 24%	5 64%	5 13%	5 38%	5.24%
Electric Utility Operating Companies	5 47	5 52	5 42	5 46	5 47	5 61
Manufactured and Mixed Gas Companies	6 12	6 72	6 72	6 89	6 61	7 04
All Natural Gas Companies	7 81	7 68	7 60	8 03	7 78	8 07
Natural Gas Pipe Line Companies — Panhandle Eastern Pipe Line Company	9 63 (*)	9 52 (*)	8 84 8 40	9 55 9 91	9 38 (**) 9 15	9 49 9. 10

Notes: (*) Data for the Panhandle Eastern Pipe Line Company cannot be computed for these years since no part of the common stock was outstanding in the hands of the public.

(**) Average for two years, 1939 and 1940.

The above table conclusively shows that for all full years studied, as well as for the interim period of 1941, January-August, both inclusive, investors appraised the risks of capital invested in natural gas companies at approximately 1 per cent higher than in manufactured and mixed gas companies, and from 2 to 2½ per cent higher than the risk of electric operating utility companies or water companies.

[fol. 13350] Furthermore, it is clearly evident that investors consider the risks of capital invested in natural gas pipe line companies to be greater than the risks encountered in other divisions of the natural gas industry.

Signed at New York City, October, 1941.

PAUL B. COFFMAN.

[fol. 13361] Statement F.

General Information Covering Each Company As To The Nature And Size Of The Business And The Territory Served.

I. Water Companies

1. Bridgeport Hydraulic Company This independent water company furnishes water for industrial and domestic purposes to Bridgeport, Stratford, Fairfield, Easton, Shelton, Trumbull and Westport, having a population of approximately 200,000. Approximately 36,000 customers are served, through 515.55 miles of mains.

2. Elizabethtown Water Company, Consolidated This independent water company serves the townships of Piscataway, Union, Clark and Hillside and the boroughs of Middlesex and Dunellen, N. J., and also serves in part the city of Plainfield, the townships of Springfield, Raritan and North Plainfield and the boroughs of Roselle and South Plainfield, N. J. The population served totals about 72,000 and the customers served about 17,000. The company has 267.22 miles of mains.

3. Hackensack Water Company This independent water company serves a population of approximately 430,000 in 53 municipalities in eastern Bergen County and northern Hudson County, N. J., including Englewood, Hackensack, Rutherford, Teaneck, Tenafly, North Bergen, Union City and Weehawken. Its wholly owned subsidiary, Spring Valley Water and Supply Co. serves a population of about 20,000 in municipalities in Southern Rockland County, N. Y., including Blauvelt, Grandview, Nanuet, Pearl River, Piermont, Sparkill and Spring Valley. The system contains 1,019 miles of mains. There are also about 104,000 service pipes, about 25 per cent of which are inactive.

4. Middlesex Water Company This independent water company serves an estimated population of 70,414 in the boroughs of South Plainfield, Metuchen, Carteret, and townships of Raritan, Woodbridge and Clark, N. J. Property consists of 175 miles of cast iron pipe line and three

sources of water supply, having a capacity of 11 million gallons per day.

5. New Haven Water Company This company owns and operates a water system supplying without competition the city of New Haven and 11 surrounding towns, including a total population of approximately 265,000. Milford Water Company, a wholly owned subsidiary, supplies water to Milford, Conn. Company and subsidiary have in operation about 545 miles of mains, supplying water to approximately 43,000 individual customers.

6. Plainfield-Union Water Company This independent water company supplies water for domestic and public use in 17 municipalities in New Jersey, including the cities of Plainfield and Linden. The company owns and operates 365.92 miles of mains and has approximately 28,000 customers.

[fol. 13362] 7. Stamford Water Company This company serves water to a population of some 50,000 in the township of Stamford, Conn. In addition, a contract is held with Greenwich Water Company to supply its need, when needed, not to exceed four million gallons of water per day. Properties include 156.5 miles of mains.

II. Electric Utility Operating Companies

[fol. 13363] 1. Bangor Hydro Electric Company Company supplies electricity without competition from any other public utility in portions of Penobscot, Hancock and Washington Counties in Eastern Maine, serving 73 communities having a total population of about 118,500. In Hancock County there is a substantial seasonal business in summer. Bangor, which is located in this company's territory, however, through its own municipal hydro-electric plant and distribution system which is connected with company's electric system, supplies electricity for municipal demands in Bangor. Approximately 45% of the electric sales revenues are derived from residential and 50% from commercial and industrial customers. Company also operates an electric street railway system in and between Bangor, Brewer, Veazie, Orono and Old Town in Penobscot County.

2. Boston Edison Company Without competition, and with no limit on franchise, this company supplies electric light and power to Boston, Mass. (excluding Charleston) and to 39 nearby cities and towns. Territory served is densely populated and company's customers are predominantly in domestic and small commercial classifications, about 37 per cent and 29 per cent of total operating revenues being derived from these respective groups. Sales to large commercial business contribute 20 per cent of revenues; street lighting sales to municipal and other electric systems, and distribution in Boston proper of steam, account for the remaining 14 per cent.

3. Central Hudson Gas & Electric Corporation Company serves and extensive territory in Hudson River Valley between New York City and Albany, supplying without competition electricity and gas to Poughkeepsie, Beacon, Kingston, Newburgh and Catskill. Also supplies electricity to 20 incorporated and 460 unincorporated villages and gas to 6 incorporated villages. In addition, it supplies energy to the Liberty, Walden and Harlem Valley districts of New York State Electric & Gas Corporation under a 10-year contract expiring May 2, 1949. Total population served is estimated at more than 267,000. In 1940, 83.5% of gross operating revenues was derived from electric service, 16.24% from gas and 0.26% from steam heating. Territory served is not highly industrialized, and communities served depend upon relatively small diversified industries and fruit and dairy farms. Company's principal industrial customers are manufacturers of building products, textiles, machine and metal products, paper and clothing and food industries. Other large customers are municipal water pumping plants and public and private institutions.

4. Cleveland Electric Illuminating Company (The) Company is engaged in the generation of electric energy and in transmission, distribution and sale thereof for light, heat and power purposes in Cleveland, Ohio, and in adjacent industrial, suburban and rural territory in Ohio extending nearly 100 miles along the south shore of Lake Erie. Company is also engaged in the production, distribution and sale of steam for heating and other purposes.

in the downtown business section of Cleveland. Approximately 95% of company's 1940 operating revenues were derived from the sale of electric energy and approximately [fol. 13364] 5% from the sale of steam. Company generates virtually all of its electric energy requirements. Territory served includes the major portions of Cuyahoga, Lake, Geauga and Ashtabula Counties, and a small part of Lorain County, Ohio. Company estimates that population of total area served is around 1,340,000.

5. Commonwealth Edison Company Company and subsidiaries supply the entire electric light and power requirements of Chicago and furnish electricity, gas and other services in the suburban area adjacent to Chicago and in other portions of Illinois as far west as the Mississippi River. Territory has an estimated population in excess of five million. Electric business is well diversified and accounts for about 90 per cent of revenues, with the remainder coming mostly from gas.

6. Connecticut Power Company (The) This operating utility supplies electricity and gas to New London and Stamford and to smaller communities including Middletown, Darien, Manchester, Waterford, New Hartford, Avon, Farmington, Bolton, Canaan, Norfolk, Thomaston and other communities in Connecticut. Electricity is furnished under long term contract to public service companies operating in Torrington, Bristol, Greenwich and Hartford. Gas is also supplied at wholesale to another company for distribution to Greenwich. Company has 60,260 electric meters and 21,000 gas meters in its territory which embraces a population of approximately 197,776. Company derives approximately 85% of its gross revenues from electric sales.

7. Consolidated Edison Company of New York, Inc. Company, with affiliates, serves approximately eight million people in New York City and vicinity. Operations include practically the entire gas and electric light and power business in Manhattan and Bronx Boroughs, New York City; almost all of Westchester County and a large part of Queens; the entire electric light and power services in Brooklyn; and a substantial steam business in important financial, commercial and residential sections of Manhat-

tan. About three-quarters of the system's total revenues are derived from the sale of electric energy, the remainder from gas, steam and miscellaneous sources. Business of the electric and gas divisions is unusually well diversified; but because of rate differentials, domestic and general retail customers account for the bulk of dollar sales:

8. Consolidated Gas, Electric Light & Power Company of Baltimore Company supplies electricity, gas and steam to Baltimore, and the first two services to surrounding territory wholly within Maryland. The population served is about 1,178,000. Nearly 75 per cent of operating revenues is derived from electric business and all but a small part of the remainder from gas operations. Electric load is well diversified, revenues from the domestic, industrial and commercial groups being approximately equal. Long term contracts are held to supply power to Pennsylvania Railroad Company.

9. Detroit Edison Company Company supplies the entire electric light and power requirements of the Detroit metropolitan area and extensive agricultural sections adjacent thereto, and also provides steam heating service in the business district of Detroit and minor gas, water and steam heating services outside the city limits. Electric [fol. 13365] revenues account for about 96 per cent of gross business. Despite preponderance of industrial load, principally with the automobile industry, promotional efforts of the management have made domestic service the largest source of revenues. Population of the area served is approximately two and one-half million.

10. Duke Power Company Company furnishes electric light and power in the manufacturing and industrial sections of North Carolina and South Carolina including Charlotte, Winston-Salem and Greensboro, North Carolina, and Greenville, Spartanburg and Anderson, South Carolina. Power is supplied at wholesale for commercial and municipal uses and to distributing companies in a territory including more than 110 cities and towns. Population served by system is approximately 1,500,000. Company also provides bus service in Charlotte and Greenville, S. C.

11. Hartford Electric Light Company (The) Besides supplying electric light and power to the City of Hartford, this company serves some 16 Connecticut towns within the same area (about 205 square miles) including West Hartford, East Hartford, Wethersfield, Tariffville, Bloomfield, East Grandy, Grandy and Newington. Number of customers is about 76,300. Total population served is about 249,000.

12. Pacific Gas & Electric Company This system supplies electricity, natural and manufactured gas, and miscellaneous services to an extensive territory in northern and central California, including the important San Francisco Bay industrial region, highly developed agricultural areas in the Sacramento and San Joaquin Valleys, and such large communities as San Francisco, Oakland, Sacramento, San Jose and Fresno. Electric operations account for approximately 70 per cent of consolidated gross revenues, with gas producing most of the remainder. Total population served aggregates over 3,200,000.

13. Pennsylvania Water & Power Company This company sells at wholesale electric power, part of which it generates while remainder is purchased. Together with its wholly-owned, transmission subsidiary, Susquehanna Transmission Co. of Maryland, the company represents an important unit in the regional power supply system supplying eastern Pennsylvania and Maryland.

14. Southern California Edison Co. Ltd. This company's service area, with a population of approximately 2,000,000, extends from the San Joaquin Valley in the central section of California to the fertile regions and highly industrialized centers in the southern part. Electric service provides virtually all of revenues, and is well diversified.

15. Tampa Electric Company Company does the entire electric light and power business in the Tampa, Plant [fol. 13366] City, Dade City and Winter Haven areas, Florida, serving a permanent population of about 192,500. It also provides street railway service in Tampa, water service in Winter Haven, operates ice plants in Dade City, Plant City, Auburndale and Winter Haven, and a precool-

ing plant at Winter Haven serving one of the largest packing houses in the State.

III. Manufactured and Mixed Gas Companies

[fol. 13367] 1. Bridgeport Gas Light Company Company supplies, under perpetual franchise, manufactured gas to a populuation of approximately 195,000 in Bridgeport, Stratford, Fairfield, Southport, Greenfield Hill, Long Hill Center, and Greens Farm, Conn. Daily capacity is 11,500,000 cubic feet.

2. Brooklyn Union Gas Company Under perpetual franchises, company supplies manufactured gas to most of Brooklyn and part of Queens, New York City. As territory served, with over 2,800,000 inhabitants, is one of the most densely populated areas in the United States, about 75 per cent of total operating revenue is derived from domestic consumers. Company owns and operates two manufacturing plants containing 16 water gas sets, with aggregate daily capacity of 84,000,000 cubic feet, and 90 coke ovens with aggregate daily capacity of 24,000,000 cubic feet.

3. Elizabethtown Consolidated Gas Company Company serves manufactured gas to a population of approximately 265,000 in 17 towns in northern New Jersey. Customers number approximately 69,000. Daily gas manufacturing capacity is 12,500,000 cubic feet.

4. Hartford Gas Company Company supplies manufactured gas to Hartford and six surrounding towns in Connecticut, serving a population of about 295,000 and approximately 56,000 customers. Plants have a daily capacity of about eight million cubic feet of water and coal gas.

5. Laclede Gas Light Company Company owns and operates the entire gas system serving a mixture of natural gas and manufactured gas to the city of St. Louis. Manufactured gas properties have a daily capacity of over 34,800,000 cubic feet. Additional manufactured gas is purchased from the Illinois & Missouri Pipe Line Company. An added supply of natural gas is available through long term contracts with Mississippi River Fuel Corporation. Distribution system consists of some 1,200 miles of mains.

Approximately 70% of its revenues is derived from domestic sales, with commercial and industrial sales contributing only about 12% and 10% respectively.

6. Peoples Gas Light & Coke Company One of the largest gas utility organizations in the world, this company supplies the entire gas requirements of the city of Chicago, serving a mixture of manufactured and natural gas to an aggregate population of about 3,700,000. Production facilities include five manufacturing plants with total daily capacity of 737,760 therms of coke oven and water gas. Natural gas transported from the Texas Panhandle fields to Chicago by affiliated pipe line companies is purchased under contract. Management has stated that when and if the supply of such fuel is materially curtailed or exhausted, or when company discontinues its purchases, service will be restored to a straight manufactured gas basis.

7. Providence Gas Company Company supplies manufactured gas to Providence and eight surrounding towns in Rhode Island, serving a population of nearly 400,000. It also produces and markets coke and other by-products. Plants have a daily generating capacity of 12,000,000 cubic feet of coal gas and 10,500,000 cubic feet of water gas.

[fol. 13368] 8. Seattle Gas Company Company supplies manufactured gas for light, heat and fuel in Seattle, Renton and Kent, and 21 surrounding communities in the state of Washington, serving a population of approximately 391,000. Generating capacity of water and oil gas plant is 15,900,000 cubic feet per day.

9. Springfield (Mass.) Gas Light Company This company supplies manufactured gas to cities of Springfield and Chicopee and six surrounding communities in Massachusetts, serving as estimated population of 241,000 and about 52,000 customers. Gas is also sold to the City of Holyoke Municipal Plant. Coal and water gas plants have a daily capacity of 16,200,000 cubic feet.

10. Washington Gas Light Company Company and subsidiaries are engaged in the business of manufacturing, purchasing, distributing and selling gas within the metropolitan area of Washington, embracing the District of

Columbia and adjacent territories in Maryland and Virginia. Population of the entire service area is estimated at about 865,000 people, and business is almost entirely domestic. The gas distributed and sold is a mixture of 70 per cent manufactured gas and 30 per cent natural gas, with a heating content of about 600 B.t.u. per cubic foot.

IV. Natural Gas Companies

[fol. 13369] 1. Arkansas Louisiana Gas Company. This company, a subsidiary of Arkansas Natural Gas Corporation, was incorporated in Delaware on March 9, 1928 as Southern Cities Distributing Company, and has since by merger or acquisition succeeded to the operation of all the natural gas properties in Arkansas, Louisiana and Texas formerly owned by Arkansas Natural Gas Corporation and subsidiaries. Bulk of company's revenue comes from direct distribution of natural gas to domestic, commercial, industrial, and other customers in 102 communities in Arkansas, Louisiana and Texas. The population supplied is about 300,000. Company's principal properties from a complete natural gas system, including production, transmission and distribution facilities. As of December 31, 1940, company owned 142 natural gas wells. Acreage held is classified as 22,000 producing and 97,300 undeveloped. Transportation and distribution facilities consist of 3,425 miles of pipe line and 9 compressor stations.

2. Atlantic Seaboard Corporation This company, a subsidiary of Columbia Gas & Electric Corporation, owns and operates, with a subsidiary, a gas transmission pipe line from Kentucky to West Virginia, Virginia and Maryland. Natural gas is purchased and transported to those three states for sale at wholesale to subsidiaries, affiliates and outsiders for retail distribution.

3. Cabot, Inc., Godfrey L. was incorporated in Massachusetts September 14, 1922. The company supplies natural gas at wholesale to other gas utility companies (principally Hope Natural Gas Company and Cabot Gas Corporation, a subsidiary), and at retail to some 4,838 customers in West Virginia, Pennsylvania and New York. Company also manufactures and sells carbon black in various states and foreign countries. At December 31,

1939, the company had 416 producing gas wells and 12 compressor or booster stations with a total rated capacity of 4,134 h. p. Company's leased and owned lands in West Virginia, New York and Pennsylvania cover 281,676 acres, of which 32,180 acres are operated and 249,496 acres are unopera[illegible] leased lands total 209,728 acres and owned lands, 71[illegible]

4. Canadian River Gas Company. This company is an affiliate of Southwestern Development Company, and was incorporated under the laws of Delaware, February 24, 1928, for the purpose of producing and transporting natural gas, and although a separate legal entity, operates substantially as a business and physical unit with Colorado Interstate Gas Company in accordance with certain operating agreements. The company supplies all the natural gas required by Colorado Interstate Gas Company for distribution through its pipe line system extending as far north as Denver and 25% of the requirements of Natural Gas Pipeline Company of America (delivered near Gray, Okla.) for resale mainly in Chicago, Illinois. At December 31, 1940, company held leases on 315,000 acres, of which 309,500 acres were operated, and owned 97 gas wells of a total of about 1,490 sweet and sour wells in the entire Texas Panhandle (Amarillo) gas field.

[Fol. 13370] 5. Carnegie Natural Gas Company, a subsidiary of United States Steel Corp., produces and purchases natural gas, the major portion of which is sold to affiliates for industrial purposes. Some natural gas is supplied at wholesale to other gas utility companies and at retail to about 3,000 customers in Pennsylvania and West Virginia. Company's leased (181,149 acres) and owned (3,099 acres) properties are classified as operated, 88,487; unoperated, 95,761. At December 31, 1939 company had 1,083 producing wells, 16 compressor or booster stations with a rated capacity of 10,650 h. p., 675 miles of gathering mains, and 584 miles of transmission mains.

6. Chicago District Pipeline Company, a subsidiary of Peoples Gas, Light & Coke Co., was incorporated in Illinois September 10, 1930 as Will Cook Construction Co. Company now purchases natural gas from Natural Gas

Pipe Line Co. of America and transports and resells such gas at wholesale to parent and other gas utilities serving territories adjacent to Chicago. Company owns a metering station at Joliet, Ill., and about 80 miles of pipeline from Joliet to the Chicago area.

7. Cincinnati Gas Transportation Company, a subsidiary of Columbia Gas & Electric Corp. (99.4%), was incorporated in West Virginia June 2, 1908, for the purpose of building and operating pipe lines connecting natural gas fields in West Virginia and Kentucky with the city of Cincinnati. The company owns and operates a high pressure gas transmission line about 195 miles in length.

8. Cities Service Gas Company, controlled by Empire Gas & Fuel Co., was incorporated under Delaware laws January 18, 1922, as Empire Natural Gas Co.; name was changed to Cities Service Gas Co. July 6, 1927. The company operates a gas pipe line system comprising 4,332 miles of line and 15 mainline compressor stations. Gas is sold to local companies serving 285 cities and communities in western Missouri, eastern Kansas and northern Oklahoma, or a total population of about 1,510,000.

9. Colorado Interstate Gas Company, controlled by Southwestern Development Co. and Standard Oil Co. of New Jersey, was incorporated June 8, 1927 in Delaware. Company transports and sells natural gas to industrial and domestic markets in Colorado, and supplies 25% of the gas required by Natural Gas Pipe Line Co. of America. By reason of long term contracts, company operates as a physical and business unit with Canadian River Gas Co., an affiliate of Southwestern Development Co. Company owns a transmission system consisting of about 420 miles of natural gas pipe lines, three compressor stations of 8,000 h. p. capacity, measuring stations and general property.

[fol. 13371] 10. Consolidated Gas Utilities Corporation, was incorporated in Delaware June 28, 1935 as successor in reorganization to Consolidated Gas Utilities Co. The company is engaged in production, transportation and wholesale and retail distribution of natural gas in western and northern Oklahoma and south central and southeastern Kansas, serving a population of 400,000 in over 50

communities. The company owns and operates 34 gas distribution systems of approximately 1,460 miles of transmission pipe lines, 12 compressor stations having a combined horsepower of about 10,070, and approximately 8,506 acres of undeveloped and 10,132 acres of developed oil and gas leases with 160 gas wells thereon. Company also has contracts to purchase gas from 200 wells.

11. East Ohio Gas Company, entirely owned by Standard Oil Co. (N. J.) was incorporated under laws of Ohio February 24, 1910. The company supplies the entire natural gas business in Cleveland, Ohio, and in over 59 other cities and towns in eastern and northern Ohio, serving a total population of approximately two millions. The daily manufacturing capacity is 3,500,000 cu. ft. The company has 6,722 miles of pipe line with 3 compressor stations of a total horsepower of 2,805. Early in 1941 a new manufacturing and storage plant was completed for handling gas in a liquid state to provide for the requirements in the peak season; the capacity of the new storage plant is 250,000 cu. ft. of liquid gas which is equivalent to about 150,000,000 cu. ft. of natural gas in its gaseous state.

12. El Paso Natural Gas Company, a subsidiary of Standard Oil Co. of N. J., was incorporated in Delaware November 28, 1928. Company and subsidiaries purchase natural gas from producers in the Lea County field in Southeastern New Mexico, transmit it through a 1,526 mile pipe line system with a daily capacity of 105,000,000 cu. ft. and sell it at wholesale to public utility and industrial customers in Texas, New Mexico, Arizona and Mexico. A wholly owned subsidiary is engaged in the production of gas and oil incident thereto. Properties include the pipe line, six compressor stations equipped with thirty 800 h. p. units, and two gasoline absorption plants.

13. Hope Natural Gas Company, wholly-owned by Standard Oil Co. (N. J.) was incorporated in West Virginia September 17, 1898. The company supplies natural gas to other utility gas companies and to various communities in West Virginia, with a total of 42,444 customers. The company operates leased acreage of 373,361 acres and owned acreage of 7,717 acres. Unoperated acreage consists

of leased lands of 577,615 acres and owned lands of 5,647 acres. At December 31, 1938, the company had 3,502 producing wells and 46 compressor or booster stations with a total rated capacity of 93,530 h. p.

[fol. 13372] 14. Houston Natural Gas Corporation was incorporated in Texas May 29, 1940, to acquire properties previously owned by Houston Natural Gas Corp. (Delaware) and its four subsidiaries. The company is engaged in the business of purchasing, distributing and marketing natural gas at retail in Houston and sixty-nine other towns in the Texas Gulf Coast area. Gas is purchased under contract from Houston Pipe Line Co., Houston Oil Co. of Texas, and several other producers. The company owned 1,251.98 miles of transmission and distribution lines as of June 30, 1940.

15. Interstate Natural Gas Company, Inc., a subsidiary of Standard Oil Company of N. J. was incorporated in Delaware on April 1, 1926. Company supplies, under contract, fuel requirements of Baton Rouge refinery of Standard Oil Co. of Louisiana, and markets excess at wholesale to utilities, industrial companies and municipalities along the route of its pipe line. Property consists mainly of 54,000 acres of leases and gas rights in the Monroe field of Louisiana, 170 miles of pipe line from the field to Baton Rouge, compressor stations with a daily capacity of 100,000,000 cu. ft. of gas, field lines, natural gas reserves and wells.

16. Kentucky West Virginia Gas Company, incorporated in West Virginia November 23, 1926 as Pittsburgh & West Virginia Pipe Line Co., owns and operates natural gas properties and pipe lines in Kentucky and West Virginia. Practically entire output is furnished to the gas systems of the companies (Louisville Gas & Electric Co. and Philadelphia Co.) which control it.

17. Lone Star Gas Corporation, incorporated in Delaware on January 23, 1926, is exclusively a holding company, owning stocks and obligations of seven operating subsidiaries comprising the Lone Star System which is principally engaged in the production, purchase (the system purchases over 75% of its gas requirements), trans-

mission and distribution of natural gas in Texas, Oklahoma, and Iowa. The system sells natural at retail in more than 300 communities with a combined population of 1,600,000. Properties at December 31, 1938 included about 163,000 acres owned or leased of which about 58,000, containing approximately 400 wells, were developed; approximately 4,500 miles of pipe line; 2,250,000 cu. ft. of gas storage holders, standby gas manufacturing plants, oil absorption plants, and compressor stations with a capacity of 34,400 h. p.

18. Manufacturers Light and Heat Company, a Pennsylvania corporation controlled by Columbia Gas & Electric Corp., distributes natural gas at retail in western Pennsylvania, eastern Ohio and northern West Virginia to an area of estimated population of 1,117,000. Its gas transmission facilities are connected with the transmission systems of, and it sells natural gas to, and purchases natural gas from, various affililated companies and independent producers. It also produces natural gas.

[fol. 13373] 19. Memphis Natural Gas Company, affiliated with Commonwealth Gas Corp., was incorporated in Delaware June 11, 1928. The company purchases and sells natural gas at wholesale only under long-term contracts. To a very small extent, the company is also engaged in the production of crude oil. Properties include approximately 402 miles of pipe line with a daily rated transportation capacity of at least 105,000,000 cu. ft., 4 compressor stations with an installed capacity of 16,425 h. p., and other equipment. The company has a one-half interest in 330 acres of an oil field in Texas, the acreage having 33 oil-producing wells with a daily proration allowable for each of 20 barrels.

20. Michigan Gas Transmission Corp., a Delaware Corporation controlled by Columbia Gas & Electric Corp., owns and operates gas transmission facilities in Michigan, Ohio and Indiana. These facilities deliver natural gas from the system of Panhandle Eastern Pipe Line Co. to the system of Michigan Consolidated Gas Co., a non-affiliate for distribution in Detroit and Ann Arbor. Its facilities also connect with the facilities of, and it sells to, various affili-

ates in Indiana and Ohio. It purchases its major requirements of natural gas from Panhandle Eastern Pipe Line Co. Gas is also sold to several other companies for resale.

21. Mississippi River Fuel Corporation is controlled by a syndicate including Standard Oil Co., (N. J.), United Gas Corp., Columbian Carbon Co. and United Carbon Co. through common stock holdings. It was incorporated in Delaware, February 8, 1928. The company buys and sells natural gas on long-term contracts. Properties consist of 450 miles of main pipe line with a daily capacity of 100,000,000 cu. ft. from Louisiana to St. Louis, together with compressing stations and branch pipe lines for deliveries of natural gas to industrial consumers and for wholesale connections to communities along the route.

22. Montana-Dakota Utilities Company was incorporated in Delaware, March 14, 1924, under the name of Minnesota Northern Power Co., functioning as a holding company until June 17, 1935, at which time the present name was adopted. At December 31, 1940 the company supplied natural gas for residential, commercial and industrial purposes to 23,757 customers in 56 communities located in western North and South Dakota and north central Montana. The company generates all the electricity used in its electric utility business and sells some to a non-affililated utility in eastern Montana, and also produces and distributes steam heat in Miles City and Glendive, Montana. Company operates 35 retail gas and electric appliance stores. At December 31, 1940, the company owned and controlled a total of 292 wells, 1,235 miles of gas transmission and field mains, 9 compressor stations and 489 miles of distribution lines. Company also owns 5 principal electric generating plants, 945.1 pole miles of transmission lines and 96 substations; also owns 1.4 miles of low pressure [fol. 13374] steam mains. Of 1940 gross revenue, 71% was derived from natural gas and the remainder from electric and miscellaneous services.

23. Mountain Fuel Supply Company was incorporated in Utah May 7, 1935, to merge Western Public Service Co. and its subsidiaries. The company is engaged in produc-

tion of natural gas in Colorado, Wyoming and Utah and the transmission to and distribution of such gas in Salt Lake City and surrounding territory to 29,770 active customers as of the end of 1940. Gas supply is obtained from 44 wells in seven fields. Company's undrilled leaseholds total 56,711 acres and its pipe line extending from gas fields to territory served have a daily capacity of 72 million cu. ft. The company had about 1,463 miles of gathering, transmission and distributing lines at the end of 1940.

24. National Fuel Gas Company, incorporated December 8, 1902 in New Jersey as successor to Natural Gas Trust Co., supplies, through fifteen subsidiaries, natural (30%) and mixed (70%) gas to a population of about 1,325,000 in western New York, western Pennsylvania, eastern Ohio and Ontario, Canada. Industrial users accounted for approximately 14% of total sales in 1940, and some 42% of gas requirements were purchased from non-subsidiaries. Subsidiaries owned on December 31, 1940, 4,244 wells, located on 431,196 acres operated. Unoperated acreage amounted to 792,144 acres. Pipe lines in the system aggregated about 8,058 miles.

25. Natural Gas Company of West Virginia, a subsidiary of Columbia Gas & Electric Corporation, distributes natural gas at retail to an estimated population of 224,760 in West Virginia, Pennsylvania and Ohio. Company produces and purchases from independent producers, natural gas. Company's gas transmission facilities connect with the transmission system of, and it purchases natural gas from and sells natural gas to, the Manufacturers Light and Heat Co. and Ohio Fuel Gas Co., affiliates.

26. Natural Gas Pipeline Company of America, incorporated in Delaware April 25, 1930 as Continental Construction Corp., was controlled at December 31, 1940 by five corporations, holdings of three of which (Cities Service Co., Peoples Gas, Light & Coke Co., and Texas Corp.) totaled 68.72%. Company purchases natural gas (75% from Texoma Natural Gas Co., 25% from Colorado Interstate Gas Co. in 1940) which it conveys to Joliet, Ill., and sells indirectly to other utilities for distribution in the Chicago area. Small quantities of gas are sold at different

points along the main pipe line. Property includes 823 miles of pipe line which has a daily capacity of 210,000,000 cu. ft., nine compressor stations containing a total of forty-eight 1,250 h. p. compressors, and a gas treating plant.

[fol. 13375] 27. New York State Natural Gas Corporation is a subsidiary of Lycoming United Gas Corp., in turn a subsidiary of Standard Oil Co. (N. J.). This company in 1939 operated 24,370 acres of property and had 124,395 acres unoperated, with a total of 35 wells. The annual gas production was 8,386,850,000 cu. ft. The company had 266.07 miles of pipe line with 2 compressor stations of a total of 960 h. p. In addition to its own production, the company also purchases gas from independent producers. Sales are at wholesale only.

28. Northern Natural Gas Company was incorporated under the laws of Delaware, April 25, 1930. The company's common stock is held as follows: Lone Star Gas Corp., 30%; North American Light & Power Co., 35%; United Light & Railways Co., 35%. North American Light & Power holdings are to be offered for sale to the public under registration statement filed April 21, 1941. The company is engaged in the purchase, production, gathering, transmission and distribution of natural gas. Natural gas is sold principally at wholesale, in Iowa, Nebraska, South Dakota and Minnesota. The company and subsidiaries own approximately 2,800 miles of transmission lines. The company's natural gas production properties consist of 52 wells owned on 202,700 acres held under leases. In 1940 the company purchased approximately 90% of its gas requirements from non-affiliated interests in Texas and Kansas.

29. North Penn Gas Company, a subsidiary of Pennsylvania Gas & Electric Corp., was incorporated in Pennsylvania on April 8, 1927. Company distributes natural gas directly and through subsidiaries to 58 communities in Pennsylvania and New York with an estimated population of 110,000. At December 31, 1940 the company and subsidiaries owned or leased 225,472 acres and 1,816 wells and a gas manufacturing plant (not used since 1930) with a

daily capacity of 8,000,000 cu. ft. Most wells are in shallow sands.

30. Ohio Fuel Gas Company, a subsidiary of Columbia Gas & Electric Corp., distributes natural gas and a small amount of manufactured gas at retail to a population of about 1,231,000 in central and western Ohio. Company produces and buys natural gas. Company owns a standby gas manufacturing plant with a capacity of 5,000,000 cu. ft. daily, two gas reforming plants with a capacity of 27,000,000 cu. ft. a day, 38 compressor stations with an aggregate capacity of 64,353 h. p., gas holders with an aggregate capacity of 9,570,000 cu. ft. and two under-ground gas storage reservoirs.

31. Oklahoma Natural Gas Company was incorporated in Delaware November 10, 1933 and as of November 30, 1933, under a plan of reorganization, acquired all the assets of Oklahoma Natural Gas Corp. The company's business is [fol. 13376] diversified, furnishing gas for residential, commercial and industrial purposes, and for use in oil well drilling; it also sells gas wholesale at the city gate to 21 distributing companies. The population of the territory served in Oklahoma is approximately 580,000. Property consists of 4,038 miles of distribution and transmission pipe line, 20 compressor stations having a total installed horsepower of 12,350; together with 162,258 acres of land under lease or owned in fee for use in gas production. The company draws gas from 707 wells. Approximately 93% of the gas distributed in 1940 was purchased under contract from other producers.

32. Pacific Lighting Corporation, a parent and an operating company, was incorporated under the laws of California, May 21, 1907, as successor to Pacific Lighting Co. organized in 1886. Through its subsidiaries natural gas is supplied without competition to 249 cities, towns and communities in 11 counties of Southern California, including the City of Los Angeles, an area of over 38,500 square miles, having a population estimated at 3,426,600. The territory supplied is all contiguous and is interconnected by gas pipe lines. Gas is purchased under long-term contracts from oil companies and other independent producers

located in 50 oil and gas fields in California. On December 31, 1940, the gas properties of the system comprised a total of 13,547.99 miles of gas mains and 18 field compressor stations having a total capacity of 50,719 h. p. Other facilities include 3 gas manufacturing plants for emergency service with a daily capacity of 105,032,600 cu. ft.; one Butane conversion plant having a daily capacity of 4,500,000 cu. ft.; 21 distribution booster stations with a capacity of 49,397 h. p.; 35 low pressure and 90 high pressure gas storage holders with a total capacity of 124,320,000 cu. ft.; and 9 Butane gas plants and distribution systems (serving 9 communities) having a total daily capacity of 370,425 cu ft.

33. Panhandle Eastern Pipe Line Company, controlled by Columbia Oil & Gasoline Corp. and Missouri-Kansas Pipe Line Co., was incorporated in Delaware, December 23, 1929 as the Interstate Pipe Line Company. Company, directly and through subsidiaries, does a large wholesale business in natural gas, purchasing about half and producing about half of its requirements, of which about 93% is sold to distribution companies, and 7%, to industrial concerns. Principal customer (40%) supplies gas to Detroit and Ann Arbor, Michigan. Company owns or controls gas rights on 49,417 acres of operated and 179,549 acres of unoperated land and a 50% working interest in 22,679 and 6,017 of operated and unoperated land respectively, in the panhandle of Texas, southwestern Kansas and Texas County, Oklahoma and, as of December 31, 1940, owned 135 wells (in 46 of which company had only a 50% interest). Total connected open flow of wells owned or controlled by company at that date was 4,423,000 M.C.F. Property in-
[fol. 13377] cludes 2,374 miles of pipe lines, 12 compressor stations with gas driven units aggregating 80,100 h. p. capacity, meter stations, a dehydrating plant and a natural gasoline extraction plant.

34. Peoples Natural Gas Company (Pa.), a subsidiary of Standard Oil Co. of New Jersey, was incorporated June 26, 1885 in Pennsylvania. Company produces, purchases, transports and distributes natural gas in southwestern Pennsylvania, and supplies natural gas to the Pittsburgh area. Company holds leases for and owns oil and gas properties and maintains pipe lines.

35. Pittsburgh and West Virginia Gas Company, Incorporated in West Virginia March 12, 1894, as the Fairmont and Grafton Gas Co., is a subsidiary of the Philadelphia Company-Standard Gas & Electric System. Company is engaged in producing and selling natural gas, directly and through subsidiaries.

36. Southern Natural Gas Company, This company, controlled by Federal Water Service Corp., was incorporated October 30, 1935, in Delaware pursuant to the reorganization of Southern Natural Gas Corp. Company operates a natural gas pipe line system comprising about 1,340 miles together with eleven compressor stations extending from Louisiana through Mississippi and Alabama to Atlanta, Ga. Gas is purchased under contract with non-affiliated gas producing companies; however, new contracts have been entered into which permit the company to utilize large recently-developed natural gas reserves of its own. Gas is sold at wholesale to eight distributing companies and two municipalities for distribution to domestic customers and for general and industrial customers. About 83.5% of 1940 gross revenues was derived from sales to distributing companies.

37. South Penn Natural Gas Company, a subsidiary of South Penn Oil Co., was incorporated in West Virginia on November 2, 1922. Company supplies natural gas at wholesale to other utilities and at retail to approximately 4,753 customers in West Virginia. Company's leased and owned lands in West Virginia cover 512,682 acres as follows: 285,161 operated (leased 276,400; owned 8,761); 227,521 unoperated (leased 221,152; owned 6,368).

38. Texoma Natural Gas Company, was incorporated in Delaware, May 26, 1930, and is controlled by Cities Service Co. and Southwestern Development Co., 28.56% each; Texas Corp., 18.86%; Columbian Carbon Co., 2.71%; Peoples Gas Light and Coke Co., 21.3%. The company has acquired leaseholds and wells and has constructed gathering lines in Amarillo (Texas) fields to carry natural gas to a purification refinery in Fritch, Texas. The company has also constructed a 24-inch main pipe line of approximately 76 miles to Gray, Okla., where gas is delivered to Natural Gas Pipe Line Co. of America under an agreement

dated October 15, 1931, by which 75% of the gas delivered is priced at cost of producing by Texoma. The company [fol. 13378] also has some revenue from industrial sales of gas, gasoline sales, and leased facilities.

39. United Fuel Gas Company, a subsidiary of Columbia Gas & Electric Corp., was incorporated in West Virginia. The company is engaged in producing and distributing natural gas at retail in western West Virginia and eastern Ohio to a total population of about 251,800. Its transmission facilities are connected with the systems of, and it sells natural gas to, and purchases natural gas from, various affiliated companies and independent producers. The company is a major source of supply for associated distributing companies in Ohio, Pennsylvania and Kentucky. It owns 18 compressor stations with an aggregate capacity of 68,490 h. p.

40. United Gas Pipe Line Company, controlled by United Gas Corp., was incorporated in Delaware September 3, 1937. On September 25, 1937, it acquired all the gathering lines, main pipe lines, compressor stations and natural gasoline plants of United Gas Public Service Co. and its subsidiaries, except those of Houston Gulf Gas Co., of which it acquired control. The company operates a gas pipe line business, acquiring its gas through purchase contracts, 60% of which was purchased from Union Producing Co. As of December 31, 1940 the system served directly 532 industrial customers.

41. Virginia Gas Transmission Corporation, controlled by Columbia Gas & Electric Corp., owns and operates transmission facilities in Virginia, which form a connecting link between the Maryland and West Virginia sections of the Seaboard line. Company purchases natural gas from and sells natural gas to affiliates.

42. Warfield Natural Gas Company, controlled by Columbia Gas & Electric Corp., distributes natural gas at retail in Ashland, Kentucky and contiguous territory with an estimated population of about 52,300. Company produces and purchases from independent producers, natural gas which it sells to associated companies with whom its

transmission system connects. Company owns two compressor stations with an aggregate capacity of 9,995 h. p.

43. West Texas Gas Company, a subsidiary of Southwestern Development Co., was incorporated April 14, 1927 in Delaware. Company purchases natural gas from an affiliate, and distributes it to about 28,000 customers in 42 towns in western Texas. Company owns 1,370 miles of pipe lines and has four compressor stations.

TRANSCRIPT OF RECORD

(Pages 4853 to 5267)

Supreme Court of the United States

OCTOBER TERM, 1944

No. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICHIGAN, ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

PETITION FOR CERTIORARI FILED JULY 28, 1944.

CERTIORARI GRANTED JANUARY 2, 1945.

VOL. XI.

TRANSCRIPT OF RECORD.

United States Circuit Court of Appeals

EIGHTH CIRCUIT.

No. 12,466

PANHANDLE EASTERN PIPE LINE COMPANY, A CORPORATION, ILLINOIS NATURAL GAS COMPANY, A CORPORATION, AND MICHIGAN GAS TRANSMISSION CORPORATION, A CORPORATION, PETITIONERS,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICHIGAN, COUNTY OF WAYNE, MICHIGAN, MICHIGAN CONSOLIDATED GAS COMPANY, A CORPORATION, AND MICHIGAN PUBLIC SERVICE COMMISSION, RESPONDENTS.

PETITION TO REVIEW AND SET ASIDE ORDER OF FEDERAL POWER COMMISSION

FILED FEBRUARY 6, 1943.

United States Circuit Court of Appeals

EIGHTH CIRCUIT.

No. 12,466

PANHANDLE EASTERN PIPE LINE COMPANY, A CORPORATION, ILLINOIS NATURAL GAS COMPANY, A CORPORATION, AND MICHIGAN GAS TRANSMISSION CORPORATION, A CORPORATION, PETITIONERS,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICHIGAN, COUNTY OF WAYNE, MICHIGAN, MICHIGAN CONSOLIDATED GAS COMPANY, A CORPORATION, AND MICHIGAN PUBLIC SERVICE COMMISSION, RESPONDENTS.

PETITION TO REVIEW AND SET ASIDE ORDER OF FEDERAL POWER COMMISSION.

FILED FEBRUARY 6, 1943.

Index, Volume I.

	Original	Print
Petition of Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, and Michigan Gas Transmission corporation to review and set aside an order of the Federal Power Commission	a	1
Nature of proceedings as to which review is sought	b	2
Facts and statute upon which venue is based	f	6
Points on which petitioners intend to rely	g	6
Exhibit A, Opinion No. 80 of Federal Power Commission	q	20

Order of Securities & Exchange Commission Denying Applications in Part and granting Applications in Part	10842	4087
Supplemental Order of Securities & Exchange Commission amending Findings and Opinion	10844	4089
17, Miscellaneous Data concerning Property and Operations of Panhandle Eastern Pipe Line Company	10848	4090
Schedule 1, Panhandle Eastern Pipe Line Company System Compressor Stations	10848	4090
Schedule 2, List of Communities receiving Service directly or indirectly from Panhandle Company including Population and Number of Customers as of June 30, 1941	10849	4091
Schedule 3, List of Industrial Customers receiving Service direct from Panhandle Company System, June 30, 1941	10853	4099
Schedule 11, Panhandle Eastern System Summary — Miles of Pipe by Sizes, June 30, 1941	10926	4101
30, Testimony of Rufus M. Smith	10958	4103
Schedule 2, Estimated Original Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10986	4125

	Original	Print
Schedule 3, Estimated Remaining Gas Content in the Texas Panhandle Field under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	10987	4125
Schedule 5, Comparison of Open Flow Potentials in Texas Panhandle Gas Field	10990	4129
Schedule 6, Gas Acreage owned and under Gas Purchase Contracts held by Panhandle Eastern Pipe Line Company as of June 30, 1941	10991	4131
Schedule 7, Hugoton Production to Argus Natural Gas Company, Inc. by Panhandle Eastern Pipe Line Company, et al	10992	4133
Schedule 8, Texas Production to Panhandle Eastern Pipe Line Company	10993	4135
Schedule 9, Hugoton Production to Panhandle Eastern Pipe Line Company	10997	4143
Schedule 10, Hugoton Production to Panhandle Eastern Pipe Line Company	11000	4149
Schedule 11, Analysis of Cumulative Production to Main Line to and including Fiscal Month of June 1941	11003	4155
Schedule 12, Comparative Statement of Production and Purchases from each District for the two Years ended June 22, 1940 and June 22, 1941	11004	4157
36, Testimony of Glenn G. Bartle	11010	4159
Schedule 3, Estimated Original Gas Content in the Hugoton Field, (Kansas, Oklahoma and North Texas Panhandle), under Acreage constituting Reserves of Panhandle Eastern Pipe Line Company as of July 1, 1941	11038	4176
Schedule 4, Estimated unmetered Gas from Panhandle Eastern Pipe Line Company Wells in the Hugoton Field Kansas, connected to Argus Natural Gas Company, Inc. as of July 1, 1941	11041	4181
37, Testimony and Exhibits, Market Value of Leases of Panhandle Eastern Pipe Line Co	11047	4187
R. J. Wallace	11047	4187
Summary of Market Value of Leases	11064	4199
38, Basic Statistics used in calculating Interest, ad valorem Taxes and operating Expense attributable to unused Capacity	12159	4203
39, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	12162	4206
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	12163	4206
Statement relating to Reproduction Cost—New—June 30, 1941	12164	4207
Summary	12165	4207
39-A, Reproduction Cost New of Plant, Property and Business of Panhandle Eastern Pipe Line Company and subsidiary Companies as of June 30, 1941	13130	4208
Letter P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, August 29, 1941	13130	4208

	Original	Print
Statement relating to Reproduction Cost New—June 30, 1941	13131	4209
Summary	13133	4209
40, Table showing estimated Main Line Sales, years 1941-1946, inclusive	13149	4211
41, Graph showing Sales and Gas Plant by Years, Panhandle Eastern Pipe Line Company and Subsidiary Companies	13150	4213
42, Testimony of C. H. Hinton relating to Future Capital Expenditures and Operating Expenses in Production and Gathering System West and South of Liberal, Kansas	13151	4215
43, Schedules presented in connection with the written Testimony of C. H. Hinton	13193	4244
Schedule 1, Additional Capital Expenditures required to produce and gather Basic Load, or Present Requirements	13194	4244
Schedule 2, Additional Capital Expenditures required to produce and gather Anticipated Increased Load	13195	4244
Schedule 3, Estimate of Operation and Maintenance Costs -west of Liberal Panhandle Field — Basic Load	13196	4245
Schedule 4, Estimate of Operation and Maintenance Costs — west of Liberal Panhandle Field — Estimated Future Load	13199	4251
Schedule 5, Probable Production from Panhandle Eastern's own Wells and Wells under Gas Contracts (Panhandle Field) during the Period July 1, 1940 to December 31, 1956	13202	4257
47, Panhandle Eastern Pipe Line Company and Subsidiary Companies, future Capital Requirements, Gas Transmission Facilities, Liberal Station and Eastward	13206	4257
48, Statement showing Balance Sheets per Books Panhandle Eastern Pipe Line Company and Subsidiary Companies, as at each December 31, 1930 through 1940 and as at June 30, 1941	13207	4259
49, Income Statement per Books — Period from April 1, 1932 to December 31, 1941	13210	4265
50, Statement showing Earned Surplus per Books, Period from Commencement of Operations to June 30, 1941	13212	4269
51, Statement showing Capital Surplus per Books, Period from September 1, 1930 to June 30, 1941	13214	4273
52, Statement showing Investment in Gas Plant as at each December 31, 1930 through 1940 and as at June 30, 1941	13215	4275
53, Statement of Dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941	13217	4279
54, Statement of Dividends paid on Common Stock from beginning to September 1, 1941	13219	4280
55, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940 and 1941	13220	4281
55-A, Statement showing Comparison of Sales and Revenue, Principal Industrial Customers, years 1939, 1940, and 1941	13221	4283
56, Statement of Gas Produced, Period from April 1, 1932 to June 30, 1941	13222	4284
57, Statement of Gas Purchased, Period from April 1, 1932 to June 30, 1941	13223	4285

	Original	Print
58, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941 and Schedule showing Detail of Sales to various Types of Customers, 1939 and 1940	13224	4287
Schedule 1, Statement of Gas Revenue, Period from April 1, 1932 to June 30, 1941	13224	4287
Schedule 2, Detail of Sales to Gas Utilities, years 1939 and 1940	13225	4289
Schedule 3, Detail of Sales to Industrial Customers, years 1939 and 1940	13227	4293
59, Statement of Gas Revenue by States, Period from April 1, 1932 to December 31, 1941	13229	4297
60, Statement showing Sales Agreements with other Gas Companies as at June 30, 1941	13230	4299
61, Study of Current and Future Trends in Commodity Prices and Wages, by David Friday	13238	4310
Graph showing Wholesale Prices from 1800 to 1940	13239	4311
Index Numbers of Wholesale Prices of Commodities by Groups	13241	4313
Commodity Price Indexes of Ten Countries	13247	4318
Statement relating to Tax Collections in the United States, from 1913 to 1942	13258	4328
Index Numbers of Wholesale Prices of all Commodities by Months, from 1890 to 1940	13263	4333
Statement relating to Wholesale Prices for Week Ended September 20, 1941	13264	4335
Graph relating to Average Weekly Earnings in Manufacturing Industries of New York State from 1914 to 1941	13266	4339
Graph relating to Average Hourly Earnings and Average Actual Hours per Week per Worker in twenty-five Manufacturing Industries from 1914 to 1941	13267	4341
Graph relating to Average Cost of Living from 1935 to 1939	13268	4343
62, Deduction from Cost of Reproduction New for Depreciation and Present Value of Plant, Property and Business as of June 30, 1941	13270	4345
Letter from P. McDonald Biddison, Consulting Engineer, to Panhandle Eastern Pipe Line Company, September 30, 1941	13271	4345
General Summary	13272	4347
63, Investors' Appraisal of the Risk of Capital in the Natural Gas Industry as compared with other Divisions of the Utility Industry, Summary of Analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corporation	13321	4349
Table of Contents	13322	4349
Statement of Experience and Qualifications of Paul B. Coffman	13327	4354
Investors' Appraisal of Capital Risks in Various Divisions of the Utility Industry	13348	4371
Statement A, Investors' Appraisal of Risks of Capital for the years 1937, 1938, 1939 and 1940	13351	4373

	Original	Print
Statement A-1, Investors' Appraisal of Risks of Capital for the Interim Period of 1941, January-August, Both Inclusive	13352	4375

Michigan Gas Transmission Corporation

Preliminary Report on Original Cost Studies By Central Service Corporation

1—Original Cost—Books and Records

The records and accounts of the reporting company, complete from the date of incorporation to the present date, are maintained in their general office at Detroit, Michigan under the control of Mr. L. J. Mueller, Assistant Treasurer of the Company. The books of accounts used consist of the following:

General Ledger, containing control accounts and sub accounts thereof.

Voucher Register, containing journalization of cash and journal vouchers.

Cash Books, containing journalization of all cash receipts and disbursements.

Fixed Capital Record, containing detail classified plant accounts separated so as to give effect to the detail gas plant accounts necessary to support F. P. C. Accounts 100.1 and 100.6.

Construction Work in Progress Record, containing incompleted work orders.

Completed Construction Work in Progress Record, containing the completed work orders.

Expense Distribution Record, containing the detail accounts in support of F. P. C. Account 502—Operating Expenses.

[fol. 14480] Transportation Records, containing the accumulation of transportation expenses and the distribution thereof.

The classification of accounts used in maintaining the above records at both January 1, 1940, effective date of the Uniform System of Accounts, and at June 30, 1941, is

similar to the classification prescribed by said Uniform System of Accounts and the current accounts in the General Ledger indicate the applicable F. P. C. account number.

A work order system has been used since the date of incorporation to record all charges and credits in the gas plant account, except those resulting from the property acquired from Indiana Gas Transmission Corporation, upon merger as of March 1, 1936.

The records and accounts of Indiana Gas Transmission Corporation complete from the date of its incorporation to the date of its dissolution with the exception of certain sub accounts, set up by machine bookkeeping, which cannot be located for the years 1933, 1934 and 1935, are also kept in the Detroit Office of the reporting company under the care of Mr. L. J. Mueller, Assistant Treasurer of the Michigan Gas Transmission Corporation. This company also used a voucher system and kept the following books of accounts:

General Ledger, containing control accounts and sub accounts thereof.

Voucher Register, containing journalization of cash and journal vouchers.

Cash Books, containing journalization of all cash receipts and disbursements.

[fol. 14481] Fixed Capital Record, containing detailed classified plant accounts together with the completed work orders.

Expense Distribution Record, containing the detail accounts in support of operating expenses and maintenance.

All of the cash and journal vouchers in support of all transactions are intact so that all required detail facts and information can be obtained regarding the data recorded in the missing sub accounts.

The construction work in progress sheets developed by Columbia Gas Construction Company to show the original cost of the natural gas pipe line built by them in 1931 for The Ohio Fuel Gas Company and purchased as of No-

vember 25, 1931 by Indiana Gas Transmission Corporation, are kept in the Fixed Capital Record. All of the vouchers of Columbia Gas Construction Company which support these construction work in progress sheets are also on file in the Detroit office.

2—Original Cost—Scope of Examination

(a) All charges to property and plant account, as recorded in detail accounting records of Michigan Gas Transmission Corporation, Indiana Gas Transmission Corporation, and Columbia Gas Construction Company detail cost records covering the property acquired by Indiana Gas Transmission Corporation from The Ohio Fuel Gas Company, were examined by representatives of Columbia Engineering Corporation, an affiliated service Company, under the direction of Mr. L. J. Mueller, Assistant Treasurer of Michigan Gas Transmission Corporation.

[fol. 14482] Said representatives determined the charges and credits for capital expenditures includible in "Gas Plant" (Account 100), the sub-divisions of said account (Accounts 100.1 to 100.6 inclusive), and the detail plant accounts (Accounts 301 to 392 inclusive), as prescribed by the Federal Power Commission in its "Uniform System of Accounts", effective January 1, 1940.

Said representatives also determined that the aforementioned charges constituted actual cash expenditures of the respective Companies or its equivalent. They determined, in so far as the records would reveal, if all property taken out of service by the respective Companies had been properly retired on the books of the said Companies.

Said representatives determined the amount of charges and credits requiring reclassification in the detail plant accounts.

Said representatives have partially developed units of property owned at June 30, 1941, the original cost thereof and other related data, and are in the process of preparing like data on the balance of the Company's property.

It is the Company's intention to complete a physical inventory of office furniture and fixtures and work equip-

ment which may result in further minor adjustments to "Gas Plant", but it is believed such adjustments will not be material.

(b) The Indiana Gas Transmission Corporation at the date of acquisition of property acquired from the Panhandle Eastern Pipe Line Company was furnished with a classified statement of the cost of such acquired property by said Panhandle Eastern Pipe Line Company.

[fol. 14483] Detailed cost records for the property acquired from Panhandle Eastern Pipe Line Company, except the details of labor furnished by independent contractors, are maintained in the Kansas City, Missouri, offices of Panhandle Eastern Pipe Line Company.

Central Service Corporation examined the said detail records of Panhandle Eastern Pipe Line Company by examining at least 50% of the vouchers covering payments and charges recorded in the detail cost records, and test checked the classification of the items listed in said detail bill to Indiana Gas Transmission Corporation. No detail records to substantiate the labor classification appearing in said detail bill could be located, but the total labor charge was unified with payments made to the independent contractors.

Said analysis also developed certain variations in the detail account classification of said bill, which have been corrected, and the fact that expenses totalling $3,657.83 covering expense in connection with a proposed contract with an Indianapolis, Indiana Company, not consummated, were included in said bill. Since the item of $3,657.83 is small in relation to the total cost of property acquired, said item was permitted to remain in cost of transmission mains.

In addition, said bill contains the following allocated charges representing the proportionate part of overhead and other expenses suffered on the entire line from Texas Panhandle field to Racoon Creek, at a point in Indiana about 161½ miles east of Montezuma, Indiana.

[fol. 14484]

		Per cent of Total of Respective Charges
Organization Expense	$ 1,204.48	3.24%
Franchise Expense	1,030.42	3.24%

Fees and Expenses paid to Brokaw, Dixon, Garner & McKee, Engineers	$48,073.58	5.10%
	$56,362.13	

It should be noted that the above 3.24% allocations were based on total charges, of the character indicated, made to December 31, 1930, whereas, the Indiana portion of the line was not completed until March, 1931, there being no further charges of that character made to the cost of said Indiana line by Panhandle Eastern.

The records of Panhandle Eastern did not indicate the basis for the 3.24% allocation, but we were informed by a representative of Panhandle Eastern, that said 3.24% was the ratio of the miles of Indiana Line (25.5 miles) to the total miles of line under construction (790 miles). Since the resulting amount of the 3.24% allocated charges as classified and the aggregate amount thereof ($8,288.55) is not large and represents only .88% (eighty-eight hundreds of one per cent) of total direct charges of $960,774.44 incurred in building the Indiana Line, we did not believe any further investigation of such charges was warranted.

[fol. 14485] The fees and expenses of Brokaw, Dixon, Garner & McKee, engineers, cover allocated charges of $37,932.77 to January 31, 1931, based upon 5.10% of the total of said charges applicable to the 790 miles of constructed line, and allocated charges of $10,140.81 for February and March 1931. The method of determining the portion of said charges applicable to the Indiana line is not presently available.

Central Service Corporation test checked charges made to detail construction records of Michigan Gas Transmission Corporation, Indiana Gas Transmission Corporation and Columbia Gas Construction Company detail cost records covering the property acquired from The Ohio Fuel Gas Company, by checking charges against vouchers and cash payments, examining classification of ascertainable overheads and generally established that all charges made to "Gas Plant" were at original cost, except as hereinafter noted.

As a result of the examination Central Service Corporation has established that a fee of $139,423.73 was charged The Ohio Fuel Gas Company by Columbia Gas Construction Company in connection with the construction of property acquired by the Indiana Gas Transmission Corporation as of November 25, 1931. Said fee is now classified on the books of the company in "Gas Plant—Transmission Mains" and "Gas Plant—Land and Land Rights." We understand that this amount represents largely an inter-company profit by the affiliated company. Since such in-[fol. 14486] ter-company profits, under present regulation, may be questioned we have classified this amount, together with $2,200 of interest responsive to said amount, in Account 407—"Gas Plant Adjustments". We do this in order to avoid controversy at this time in connection with the rate proceedings before the Federal Power Commission and because the amount of these items is relatively small in relation to the original cost of the "Gas Plant." In the opinion of the company the amount of these items, or a substantial portion thereof, is properly includable in original cost.

Since the date the foregoing construction was completed and put into service, namely January 1, 1932, the Indiana Gas Transmission Corporation and Michigan Gas Transmission Corporation have accrued depreciation on said fee and interest amounting to $27,617.00 and $33,990.00 at January 1, 1940, and June 30, 1941, respectively.

Central Service Corporation has prepared the following statements, which are subject to corrections believed not to be material, for the purpose of affording a preliminary review of original cost in connection with the Com-

pany's present rate case before the Federal Power Commission:

[fol. 14487] Statement—A—Outline of Origin and Development.

Statement—B—Showing for each acquisition by the reporting Company or any of its predecessors of a gas operating unit or system, the original cost, estimated if not known, the cost to such company, and the amount entered in the books in respect thereto as of the date of acquisition.

Statement—C—Not applicable, because there were no amounts arrived at by appraisal, recorded in Gas Plant accounts.

Statement—D—Showing gas plant as of January 1, 1940, and June 30, 1941, as classified in the books of account immediately prior to reclassification in accordance with the new system of accounts, including, under a descriptive heading, any unclassified plant applicable jointly to the gas department and other departments of the utility.

Statement—E—Showing summary adjustments necessary to state, as of January 1, 1940, Account 100 "Gas Plant," including all its subsidiary accounts and Account 107, Gas Plant Adjustments, as prescribed in the Uniform System of Accounts.

Statement—F—Showing "Gas Plant" (balance sheet account 100) as of January 1, 1940, classified according to the accounts prescribed in the Uniform System of Accounts effective on that date, and showing also the amount includible in Account 107, "Gas Plant Adjustments".

[fol. 14488] Statement—F (a)—Showing summary of "Gas Plant" (Account 100) of Michigan Gas Transmission Corporation and predecessor companies, as reclassified by years, for period 1931 to June 30, 1941, inclusive.

Statement—G—Comparative balance sheet, as of January 1, 1940, showing the accounts and amounts appearing in the books before the adjusting entries have been made and after such entries shall have been made.

Statement—H—Suggested plan for depreciating, amortizing, or otherwise disposing in whole or in part of the amounts, as at January 1, 1940, includible in Account 100.5 "Gas Plant Acquisition Adjustment", and Account 107, "Gas Plant Adjustments."

Statement—I—Statistical Information Relative to Gas Plant at June 30, 1941.

[fol. 14489] Statement A

Michigan Gas Transmission Corporation

Outline of Origin and Development

The reporting company was organized November 2, 1935, under the laws of the State of Delaware, with an authorized capital of 50,000 shares (increased to 60,000 shares in 1936) of common stock without par value, having one vote per share. Columbia Gas & Electric Corporation (Parent Company) caused said reporting company to be organized to conduct the following business, as summarized from the "Certificate of Incorporation" of said company:

To engage in the business of transmitting natural Gas, artificial gas and or mixed gases, into, thru and from the State of Michigan and to supply gas so transmitted to other corporations, etc. engaged in the business of supplying gas to the public.

To lay, construct, purchase, etc. pipe lines and mains for transmission of gas.

To purchase or otherwise acquire, store and transmit such gas and to sell or otherwise dispose of same to corporations, etc. as aforesaid.

To acquire and to hold, sell, exchange, etc. any and all kinds of securities created or issued by any person, etc.

To promote, organize, aid or assist, persons, etc. engaged in any business.

To borrow money for any purposes of the Corporation from time to time and without limit as to amount; to issue and sell its own securities.

To purchase, hold, cancel, reissue or otherwise deal in its own securities.

[fol. 14490] The issued and outstanding common stock of the reporting company, as at January 1, 1940, was 44,800 shares, as detailed in Statement A-1 submitted herewith.

As of March 1, 1936, the reporting company acquired by merger, pursuant to "Agreement of merger and consolidation", approved March 2, 1936, by its Board of Directors, the properties and assets of the Indiana Gas Transmission Corporation and assumed the liabilities of said latter corporation.

Subsequent to March 1, 1936, the reporting company expanded its system primarily by the addition of the property described in statement I "Statistical Information, etc.," submitted herewith, except items designated "Line A and B" therein.

The Indiana Gas Transmission Corporation was organized February 18, 1931, under the laws of the State of Delaware, with an authorized capital stock of 10,000 shares of no par value. The issued and outstanding capital stock, as of March 1, 1936, of said Indiana Gas Transmission Corporation, was 200 shares of common stock, without par value, issued for cash in the amount of $10,000.00 and was owned by Columbia Gas & Electric Corporation (Parent Company). Said common stock was acquired by said parent company for $10,000.00 about February 27, 1936, from Columbia Oil & Gasoline Corporation.

As of September 15, 1931, the Indiana Gas Transmission Corporation, a subsidiary of Columbia Oil & Gasoline Corporation acquired from Panhandle Eastern Pipe Line Company, a subsidiary of Columbia Oil & Gasoline Corporation, the following constructed properties, not then in service:

[fol. 14491] 25.89 miles of natural gas pipe lines, completed prior to date of purchase, extending from a point at the Indiana-Illinois State Line, near Dana, Indiana, in an easterly direction to a point on Big Racoon Creek, in Parke [Count] Indiana; material for approximately 20½ miles of natural gas pipe-lines under construction, extend-

ing in an easterly direction, beyond a point on Big Racoon Creek, toward Muncie, Indiana; and all rights interest etc., in the contracts, franchises, business, etc., responsive to said natural gas pipe lines, subject to all liabilities of the seller to complete said line, render service and to all encumberance on the said property and project acquired.

As of November 25, 1931, the Indiana Gas Transmission Corporation, a subsidiary of Columbia Oil & Gasoline Corporation, acquired from The Ohio Fuel Gas Company, a subsidiary of Columbia Gas & Electric Corporation, the following property and services constructed and performed by Columbia Gas Construction Company, a subsidiary, of Columbia Gas & Electric Corporation, and not then in service:

Services, etc., for the completion of approximately 20½ miles of natural gas pipe line, started by and acquired from Panhandle Eastern Pipe Line Company, as previously described in this statement; approximately 23½ miles of 20" natural gas pipe line, extending from a point approximately 23½ miles west by south of Zionsville, Indiana; 52.4 miles of 18" natural gas pipe line, extending from Zionsville, Indiana to point known as King Measuring Station located adjacent to Muncie, Indiana.

Statement A-1

MICHIGAN GAS TRANSMISSION CORPORATION

Common Stock Issued and Outstanding at January 1, 1940 and June 30, 1941

Date of Issuance	Issued to	Shares Issued	Unit Price	Amount	Consideration
November 1935	Columbia Gas & Electric Corporation	20	$50.00	$ 1,000.00	Cash-Received on November 6, 1935
November 1935	Columbia Gas & Electric Corporation	300	50.00	15,000.00	Cash-Received on November 14, 1935
March 1936	Columbia Gas & Electric Corporation	200	50.00	10,000.00	Cancellation of liability for capital stock of Indiana Gas Transmission Corporation resulting from merger with that company
March 1936.	Columbia Gas & Electric Corporation	280	50.00	14,000.00	Cancellation of loans payable to parent company in the amount of $14,000.00, which were set up on February 17, 1936 upon the receipt of a cash advance for that amount
March 1936	Columbia Gas & Electric Corporation	44,000	50.00	2,200,000.00	Cancellation of $2,200,000.00 principal amount of loans payable to parent company taken over from Indiana Gas Transmission Corporation upon merger with that company
Total Common Stock Issued and Outstanding at January 1, 1940 and June 30, 1941.		44,800	$50.00	$2,240,000.00	

MICHIGAN GAS TRANSMISSION CORPORATION

Showing for each acquisition by the reporting company or any of its predece
of a gas operating unit or system, the original cost, estimated if not known, th
to such company and the amount entered in the books in respect thereto as of the
of acquisition.

MICHIGAN GAS TRANSMISSION CORPORATION:

Date of acquisition	March 1, 1936	December 1936
From whom acquired	Indiana Gas Transmission Corporation	The Ohio Fuel Gas Company
Description of property acquired	A natural gas pipe line system consisting of approximately 122 miles of 20" or 18" transmission mains in the State of Indiana from a point on the Illinois-Indiana State Line, near Dana, Ind., in an easterly direction to a point near Muncie, Indiana, known as the King Measuring Station, together with the necessary structures and equipment required to service the system's customers (Operating unit).	Testing equipment for use at measuring and regulating stations, issued from stock at Greenville, Indiana by The Ohio Fuel Gas Company (Non-operating unit).
Original cost to company from whom acquired	$2,263,313.91	$ 156.87
Amount entered on books at date of acquisition:		
Cost to reporting company	$2,210,460.87 (2)	$ 156.87
Amount credited to depreciation reserve (1)	$ 194,476.77	-
Total amount to Gas Plant	$2,404,937.64 (2)	$ 156.87

INDIANA GAS TRANSMISSION CORPORATION:

Date of acquisition	September 15, 1931	November 25, 1931
From whom acquired	Panhandle Eastern Pipe Line Company	The Ohio Fuel Gas Company
Description of property acquired	A natural gas pipe line system consisting of 25.89 miles of completed transmission mains in the State of Indiana from a point on the Illinois-Indiana State Line, near Dana, Ind., in an easterly direction to a point on Big Racoon Creek, together with approximately 109,000 feet of pipe in the process of construction east of Big Racoon Creek (Operating unit nearing completion but not in operation.)	The Ohio Fuel Gas Company A natural gas pipe line system consisting of approximately 96 miles of transmission mains in the State of Indiana from a point on Big Racoon Creek to a point near Muncie, Ind., known as King Measuring Station. This line includes the completion of the construction in progress acquired from Panhandle Eastern Pipe Line Co. (Operating unit nearing completion but not in operation).
Original cost to company from whom acquired	$1,048,253.55	$1,157,375.55
Constructed property (gross)	-	-
Retirements	-	-
Original cost of property sold	$1,048,253.55	$1,157,375.55
Cost to acquiring company	$1,048,253.55	$1,298,999.28 (2)
Amount entered on books at date of acquisition:		
Cost to predecessor company	$1,048,253.55	$1,298,999.28 (2)
Amount credited to depreciation reserve (1)	-	-
Total amount to Gas Plant	$1,048,253.55	$1,298,999.28 (2)

* ( ) Denotes red figure.

(1) Same as the amount recorded in the depreciation reserve on predecessor company's books.

(2) Includes amount of engineering fee ($139,423.73) and interest during construction thereon $2,200.00 which amount has been estimated) ti
opinion of the Company, is properly includable in original cost, classified as at January 1, 1940 in account 107 "Gas Plant Adjustmen
is so small as to eliminate any adjustment on account thereof.

MICHIGAN GAS TRANSMISSION CORPORATION

Giving a comparative balance sheet, as of January 1, 1940, showing the accounts and amounts appearing in the books before the adjusting entries have been made and after such entries shall have been made,

		Before	After
	A S S E T S		
100.1	Gas Plant in service	-	$ 9,670,811.83(1)
100.6	Gas Plant in process of reclassification	$ 9,812,435.56	-
107	Gas Plant adjustments	-	141,623.73(2)
	Total Utility Plant	$ 9,812,435.56	$ 9,812,435.56
112	Other Investments:		
	Loan to customer in aid of construction ($7,420.97 contra)	9,637.62	9,637.62
120	Cash	418,276.55	418,276.55
122	Working Funds (petty cash and advances)	5,110.00	5,110.00
125	Accounts Receivable	934,061.97	934,061.97
126.2	Receivables from Associated Companies	28,221.19	28,221.19
131	Materials and Supplies	54,075.65	54,075.65
132	Prepayments	3,744.93	3,744.93
142.2	Other Preliminary Survey and Investigation Charges	1,039.71	1,039.71
146	Other deferred debits		
	Deferred sales promotion expense	3,374.07	3,374.07
		$11,269,977.25	$11,269,977.25
	L I A B I L I T I E S		
200	Common Capital Stock - no par value	$ 2,240,000.00	$ 2,240,000.00
	Advances from Associated Companies:		
212.1	Advances on notes	5,900,500.00	5,900,500.00
212.2	Advances on open account	570,000.00	570,000.00
222	Accounts payable	775,231.23	775,231.23
223.2	Payables to Associated Companies	4,174.45	4,174.45
228	Taxes Accrued	226,833.22	226,833.22
230	Other current and accrued liabilities	19,960.89	19,960.89
242	Other deferred credits:		
	Contractual loan from Panhandle Eastern Pipe Line Company covering 77% of an advance to a customer and repayable from collections on said advance - contra	7,420.97	7,420.97
	Miscellaneous	2,456.11	2,456.11
250.1	Reserve for depreciation of Gas Plant	1,057,724.83	1,057,724.83
256	Injuries and damages reserve	7,216.15	7,216.15
258	Other Reserves:		
	Contingencies	90,001.98	90,001.98
265	Contributions in aid of Construction	5,592.96	5,592.96
270	Capital Surplus	166,162.76	166,162.76
271	Earned Surplus	196,701.70	196,701.70
		$11,269,977.25	$11,269,977.25

(1) Includes $1,934.46 of reclassifications developed or transferable to expense and other balance sheet accounts, which were not reclassified because no reaccounting items were considered in this reclassification.

(2) Classified to account 107 "Gas Plant Adjustments" for the reasons hereinbefore stated. In the opinion of the company this amount or a substantial portion thereof is properly includible in account 100 "Gas Plant".

Statement H.

[fol. 14499] Michigan Gas Transmission Corporation

Giving a suggested plan for depreciating, amortizing, or otherwise disposing in whole or in part of the amounts, as of January 1, 1940, includible in Account 100.5 Gas Plant Acquisition Adjustments, and Account 107, Gas Plant Adjustments.

No amounts are includible in Account 100.5 Gas Plant Acquisition Adjustments. No definite basis has presently been established by the Company for disposing of the amount classified in our report to Account 107 "Gas Plant Adjustments" for the reasons hereinbefore stated.

[fol. 14500]

Statement I

Michigan Gas Transmission Corporation

Statistical Information Relative to Gas Plant at June 30, 1941

Transmission Plant - Compressor Station

NAME OF PLANT: Montezuma Compressor Station

LOCATION OF PLANT: 1 mile Northeast of Montezuma, Indiana

DATE OF ORIGINAL CONSTRUCTION:

Original Installation	November 19, 1936
1st Additional Installation	September 15, 1937
2nd Additional Installation	October 21, 1940
3rd Additional Installation	November 8, 1940

TYPE AND RATED CAPACITY OF POWER UNITS:

Original Installation	2 units	Worthington 24" x 36", 1300 BHP, 125 RPM, normal speed, horizontal, twin tandem, double acting, gas engines
1st Addition	2 units	Do
2nd Addition	1 unit	Do
3rd Addition	1 unit	Do

TYPE AND RATED CAPACITY OF COMPRESSOR UNITS:

Original Installation	4 units	15" x 36" Worthington feather valve type, designed for 500#/ square inch with two pocket unloaders. Cylinders designed for 14" to 18" range and fitted with 3 valves per corner
1st Addition	4 units	Do
2nd Addition	4 units	Do

ORIGINAL COST AT JUNE 30, 1941:

Account No.	Account Title	Amount
351.1	Land	$ 6,040.93
352.1	Pumping Station Structures	161,806.56
354.1	Pumping Station Equipment	702,837.64
	Total	$870,685.13

Statement I
(Continued)

NAME OF PLANT: Zionsville Compressor Station

LOCATION OF PLANT: 1 mile South of Zionsville, Indiana

DATE OF ORIGINAL CONSTRUCTION:

Original Installation	October 14, 1937
1st Addition	August 8, 1940

TYPE AND RATED CAPACITY OF POWER UNITS:

Original Installation	4 units - 24" x 36", 1300 BHP, 125 RPM normal speed, horizontal, twin tandem, double acting Worthington gas engines.
1st Addition	1 unit - Do

TYPE AND RATED CAPACITY OF COMPRESSOR UNITS:

Original Installation	8 units - 13-1/8" x 36" Worthington feather valve type, gas compressor cylinders, designed for 800#/sq. in. working pressure and provided with 2 pocket unloaders. Designed for range of 11-1/2" to 13-1/8" diameter and fitted with 3 valves per corner.
1st Addition	2 units - Do

ORIGINAL COST AT JUNE 30, 1941:

Account No.	Account Title	Amount
351.1	Land	$ 15,216.80
352.1	Pumping Station Structures	156,690.19
354.1	Pumping Station Equipment	634,786.44
	Total	$806,693.43

Statement I
(Continued)

NAME OF PLANT: Edgerton Compressor Station

LOCATION OF PLANT: 2 miles South of Edgerton, Indiana

DATE OF ORIGINAL CONSTRUCTION:

Original Installation — December 16, 1940

TYPE AND RATED CAPACITY OF POWER UNITS:

Original Installation — 3 units - 24" x 36" Cooper-Bessemer, 1300 BHP, 125 RPM, Type 24, horizontal, twin tandem, double acting gas engines

TYPE AND RATED CAPACITY OF COMPRESSOR UNITS:

Original Installation — 6 units - 13-1/4" x 36" Cooper-Bessemer Compressor cylinders, designed for 600#/ sq. in. working pressure and equipped with two pocket unloaders.

ORIGINAL COST AT JUNE 30, 1941:

Account No.	Account Title	Amount
351.1	Land	$ 3,005.16
352.1	Pumping Station Structures	127,763.65
354.1	Pumping Station Equipment	474,602.95
	Total	$605,371.76

Construction Work In Progress	109,157.73	100.00	109,157.73	—
Total	$12,261,260.55	97.47	$11,951,034.05	$310,226.50

(a) Percent condition shown in Exhibits 80, 81, and 82, as summarized and applied to reproduction new value of "Gas Plant" by Francis S. Haberly, Engineer, in his Exhibit 84. Such percent condition was developed and weighted on the basis of the reproduction cost of the "Gas Plant". If such percent condition had been weighted on the basis of original cost, the resulting percent condition of the property would have been slightly higher than the amount shown in this statement.

Michigan Gas Transmission Corporation

Working Capital as at June 30, 1941

The following constitutes the reasonable amount of working capital employed and currently needed in the conduct of the business which would be deprived of any return unless included in the rate base.

Cash fund operating expenses, based on monthly average of pro forma operating expenses, excluding purchased gas, taxes, prepayments and depreciation and amortization and using 45 days (average period, in days, expense is paid before it is repaid by customer), from Page No. 2	$ 47,175.05
Materials and supplies, based on actual material and supplies on hand at June 30, 1941, per books, plus estimated amount of increase therein resulting from change in price trends to June 30, 1941, from Page No. 3	100,723.78
Purchased gas cost for line pack after deducting any portion of such cost capitalized, based upon average for twelve months ended June 30, 1941, from Page No. 4	31,406.70
Prepayments consisting of average of amounts applicable to subsequent periods as recorded on balance sheets during the twelve months ended June 30, 1941, from Page No. 6	4,538.55
Minimum bank balances required to support check privileges, based upon advice received from depositories, from Pages No. 5 and 7	116,303.00
Total Working Capital	$300,147.08

National Bank of Detroit

Detroit, Michigan

September 30, 1941

Elbert S. Burns

Mr. George S. Young, Vice President
Michigan Gas Transmission Corporation
1316 United Artists Building
Detroit, Michigan

Dear Mr. Young:

In compliance with your request that we furnish your office with the aggregate gross deposits which it will be necessary for you to maintain in our bank, to maintain the accounts which you carry on our books in a manner satisfactory to us, we are pleased to advise you as follows:

Upon making our standard analysis based on the average activity in all accounts for the first eight months of 1941 and taking into account the increased reserve requirements which will be effective as of November 1, 1941, as well as the matter of our customary nominal profit we find that we will require $116,303.00 aggregate gross balances to maintain the accounts under the same conditions as we experienced the first eight months of this year.

This figure will, of course, be subject to adjustment from time to time as the activity varies for quarterly or semi-annual periods.

We trust this meets fully with your request.

Very truly yours,

ELBERT S. BURNS, (signed)
Cashier.

* ( ) Denotes red figure

(a) - The routine minor additions to general property represent mainly office furniture and equipment. No additional operating expenses are expected to be incurred on account of these additions and the amount of depreciation and taxes applicable thereto are negligible.

(b) - The 24" loop line and the Edgerton compressor station were placed in service on November 1, 1940 and December 16, 1940, respectively, and revenues and expenses resulting from their operation subsequent to such dates are reflected in the gross operating income for twelve months ended June 30, 1941.

Michigan Gas Transmission Corporation

Variation in Purchase Power of Dollar As Related To "Gas Plant"

Francis S. Haberly
Consulting Engineer
Chicago

[fol. 14520] Michigan Gas Transmission Corporation

Variation In Purchasing Power Of Dollar As Related To "Gas Plant"

The attached charts show the yearly variation in purchasing power of the dollar as spent for construction of certain important parts of the plant and property of the Michigan Gas Transmission Corporation. The tabulation following the charts shows numerically the same data as shown on the charts, plus the numerical data covering variation in purchasing power of the dollar with regard to several other parts of the property.

While a small part of the mains were constructed in 1930 and 1931, the present company was formed in 1935, and construction on a broad scale started in 1936. For this reason, the year 1936 has been taken as 1.00. The figures for other years express the relative purchasing power of the dollar as compared with 1936. For example, in the first column, headed "1300 hp. Main Compressor Units," the figures express the purchasing power of the dollar relative to 1936 as experienced in the purchase of equipment of this type by the Michigan Gas Transmission Corporation. Likewise, the figures in the succeeding columns express the purchasing power of the dollar relative to 1936 as experienced in the purchase or construction of other items of property.

The last column on this tabulation, headed "Composite of Total 'Gas Plant' ", represents the variation in the purchasing power of the dollar as spent for all the property constructed each year.

[fol. 14521] The figure of .862, as shown in the lower right hand corner of the tabulation opposite the caption "Purchasing Power at June 30, 1941 of Actual Dollars spent on 'Gas Plant'," expresses the percent of property that could have been built at the time the various units of property were built by using today's dollar with its present purchasing power. In other words, the same number of dollars as were originally spent for this property, if spent as of June 30, 1941, would build only 86.2% of the present plant.

FORM A-2

For Corporations

SECURITIES AND EXCHANGE COMMISSION

WASHINGTON, D. C.

REGISTRATION STATEMENT

Under

SECURITIES ACT OF 1933

PANHANDLE EASTERN PIPE LINE COMPANY

(Name of Registrant)

Securities Registered

Title of Issue, or Issues	Amount
First Mortgage and First Lien 3% Bonds, Series B, due November 1, 1960.	$12,000,000

Amount of Filing Fee: $1,260.00.

Approximate Date of Proposed Public Offering: As soon as practicable after the effective date of this Registration Statement.

Name and address of person authorized to receive notices and communications from the Securities and Exchange Commission:

R. A. Ransom, 90 Broad Street, New York, New York.

EXHIBIT 106. 4961

The information required to be given under the items hereinbelow set forth is more specifically defined in the "Instruction Book for Form A-2 for Corporations."

The Instruction Book also sets forth requirements as to Financial Statements, Exhibits, Signatures, Consents of Experts and the Prospectus, which are to accompany the registration statement or to be incorporated therein by reference.

The financial statements and schedules filed herewith and the answer set forth in Item 45 of this Registration Statement have been reviewed by Messrs. Arthur Andersen & Co., accountants and auditors, and such statements and information are made or given on the authority of said firm. The statements with respect to matters of law and legal conclusions made in Item 5 with respect to jurisdiction of commissions of certain states, in Item 6 as to dissolution of subsidiaries of the Registrant, in Item 7 as to the ownership by the Registrant of its production property and transmission property, in Item 8 as to franchises and concessions, in Item 15 as to liens securing the Registrant's First Mortgage and First Lien 3% Bonds, Series B and First Mortgage and First Lien Bonds, Series A, in Item 40 as to litigation, and in Item 41, except paragraphs 4 and 5 thereof, as to material contracts, have been reviewed by Glenn W. Clark, head of the Registrant's legal department, and such statements are made on the authority of such counsel. The statements with respect to matters of law and legal conclusions made in Item 5 with respect to the Public Utility Act of 1935, in Item 6 under the heading "Certain Other Phases of Corporate History" in so far as such statements relate to any proceedings to which the Registrant is a party, and in paragraphs 4 and 5 of Item 41, have been reviewed by Edward N. Goodwin, general counsel of the Registrant; and such statements are made on the authority of such counsel. The letter set forth in Item 7 under the heading "Production Property and Gas Reserves" has been prepared by Ralph E. Davis, Inc., Engineers, and the letter in Item 7 under the heading "Transmission Property" has been prepared by P. McDonald Biddison, Consulting Engineer, and all of such statements are made, and all such information is presented, on the authority of said corporation and individual, respectively, as experts.

CALCULATION OF REGISTRATION FEE

Col. A	Col. B	Col. C	Col. D	Col. E
Title of Issue, or issues registered	Amount registered	Proposed maximum offering price per unit	Proposed maximum aggregate offering price	Amount of filing fee
First Mortgage and First Lien 3% Bonds, Series B, due November 1, 1960	$12,000,000	105%*	$12,600,000*	$1,260.00

* Plus accrued interest from November 1, 1940 to date of delivery. Estimate solely for the purpose of calculating the filing fee.

ORGANIZATION

1. **Exact name of registrant:**

PANHANDLE EASTERN PIPE LINE COMPANY

2. **Address of principal executive offices:**

1221 Baltimore Avenue, Kansas City, Missouri, and 90 Broad Street, New York, New York.

3. **The state or other sovereign power under which incorporated, and the date of incorporation:**

State of Delaware, under name Interstate Pipe Line Company, on December 23, 1929. Name changed to Panhandle Eastern Pipe Line Company on May 9, 1930.

4. **List the following and indicate the respective percentages of voting power as required by the Instructions:**

(a) All subsidiaries of the registrant.	Percentage of Voting Power of Securities Owned by Panhandle Eastern Pipe Line Company
Illinois Natural Gas Company, an Illinois corporation	100%

(b) All parents of the registrant.	Percentage of Voting Power of Securities of Panhandle Eastern Pipe Line Company Owned	
	Percentage	
	Within Classes	To Total(1)
Gano Dunn, Trustee for Columbia Oil & Gasoline Corporation appointed pursuant to Decree dated January 29, 1936, in Cause No. 1099 in Equity in the District Court of the United States for the District of Delaware(2)		
Common Stock	50.1%	56.1%
Preferred Stock		
Class A	100%	
Class B	100%	
Missouri-Kansas Pipe Line Company		
Common Stock	42.0%	37.0%(1)

(1) This percentage relates to voting power on all matters except the election of directors. As to the latter the Class B Preferred Stock has the right to elect two directors, the balance being elected by the Common Stock by cumulative voting.

(2) The Decree states, in effect, that its purposes are to provide against domination or control, direct or indirect, in the affairs of the Registrant by Columbia Gas & Electric Corporation, and the maintenance of the Registrant in a position of free and independent action in the production, transmission, sale and distribution of natural gas in competition with others.

The Registrant is unable to make any representation with respect to the degree of control exercised by Columbia Gas & Electric Corporation over Columbia Oil & Gasoline Corporation. However, the Registrant is informed that Columbia Gas & Electric Corporation owns all of the outstanding Twenty-Year Debentures of Columbia Oil & Gasoline Corporation, and all the Preferred Stock of Columbia Oil & Gasoline Corporation, the holders of which, voting as a class, are entitled to elect the greatest number of directors which shall constitute a minority, and that the holders of the Common Stock of Columbia Oil & Gasoline Corporation, none of which is owned by Columbia Gas & Electric Corporation, are entitled, voting as a class, to elect the smallest number of directors which shall constitute a majority, but none of the directors so elected by the holders of the Common Stock may be a director, officer or employee of Columbia Gas & Electric Corporat on or any of its subsidiaries.

The following provisions of the Decree are quoted to indicate the relationship to the Registrant of Columbia Oil & Gasoline Corporation and Columbia Gas & Electric Corporation. Such provisions as do not affect this relationship are omitted.

Section II provides:

"That the defendants be and they are hereby perpetually enjoined from exercising, or attempting, individually or collectively, directly or indirectly, to exercise any dominion or control over Panhandle Eastern and from restraining, or interfering in any manner with the free and independent action of said Panhandle Eastern in the production, transportation, sale or delivery of natural gas to any person, corporation, community or section of the United States; from holding, acquiring, voting or in any manner acting as the owners, directly or indirectly, of the whole or any part of the stock, or other share capital, or bonds, property or assets of Panhandle Eastern or any other company, corporation, association or organization owning any substantial amount of its securities; and from participating

in any way, directly or indirectly, or from exercising any control, direction, supervision, or influence, in the management or control of Panhandle Eastern; except

* * * * * *

"(c) That Columbia Gas and defendant Hillman may own or acquire obligations, without present or potential voting rights, of said Panhandle Eastern, except that Columbia Gas is hereby enjoined and restrained in connection with enforcing any rights under said obligations with respect to principal, interest or sinking fund, from acquiring any of the pipe line or other physical assets of Panhandle Eastern;

"(d) That Columbia Oil may own or acquire stock or obligations in Panhandle Eastern and exercise voting rights appurtenant thereto (and defendant Bay may be and exercise the lawful rights of an officer of Panhandle Eastern), subject to the further terms and provisions of this decree, but Columbia Gas is hereby perpetually enjoined and restrained from acquiring any interest in such stock, by operation of law, or in connection with enforcing any lien created through the present or future existence of any debt, whether funded or unfunded, of Columbia Oil to Columbia Gas, or otherwise;

"(e) That, when Columbia Gas has effectively divested itself of all control, direct or indirect, legal or practical, of Panhandle Eastern by no longer owning stock of any class having present or potential voting rights in Columbia Oil, upon the approval of this Court Columbia Oil shall no longer be subject to the restrictive clauses of this Section II;"

Section III provides:

"That Gano Dunn is hereby nominated, constituted and appointed Trustee for the purposes and with the powers and duties set forth in this Section III;

"That within 10 days after the entry of this decree Columbia Oil shall execute, and deposit with said Trustee the agreements and offers executed by it in accordance with, its agreements set forth in Section V of the stipulation pursuant to which this decree is entered;

"That within 10 days after the entry of this decree Columbia Oil shall transfer all of its stock now owned and thereafter all stock subsequently acquired in Panhandle Eastern, having present or potential voting rights, to said Trustee to hold the legal title to said stock and to exercise all the rights and privileges incidental to the absolute ownership thereof upon the following terms and conditions:

"(a) To vote said stock for the election of as many directors of Panhandle Eastern as the number of shares thereof may be entitled to elect; *Provided*, that one of the directors so elected shall be the trustee; and that the remainder shall be selected from among persons recommended by the beneficial owner of said stock, in conference and with the advice of the Trustee, but not including any of the individual defendants herein or any one (except with the approval of the Trustee and this Court) who after January 1, 1931, has been or hereafter becomes an officer, director, agent or employee of Columbia Gas; and that, as to the directors so selected, the trustee is empowered to remove and replace such directors with others of his own choosing upon his own motion, if in his judgment such action is necessary in the interest of Panhandle Eastern or for the effectuation of the purposes of this decree; subject, however, in this as well as in the exercise of all other powers to the authority of this Court upon the motion and showing of any party hereto, or upon its own motion, to restrain said Trustee from abuses of sound discretion, in view of the purposes of this decree and the law under which it is entered, or in case said Trustee does not act in good faith hereunder;

"(b) To vote said stock upon all other questions and matters in which the stock is entitled to vote, as directed by the beneficial owners thereof, except when such directions are inconsistent with the purposes of this decree;

* * * * * *

"(e) To pay over to Columbia Oil all dividends received upon said stock; except that dividends in the form of stock having present or potential voting rights shall be retained by the trustee subject to the same terms and conditions as the other shares held hereunder;

(f) To exercise all rights to subscribe to additional stock or other securities of Panhandle Eastern as Columbia Oil may direct;

* * * * * * *

"That the trust hereby created shall be and remain in full force and effect until terminated with the approval of this Court when (1) Columbia Gas has effectively divested itself of all control, direct or indirect, legal or practical, of Panhandle Eastern by (a) no longer owning stock of any class having present or potential voting rights in Columbia Oil or (b) by Columbia Oil divesting itself of ownership of all stock of Panhandle Eastern; or when (2), under the circumstances then existing, the continuation of said trust is no longer essential or necessary in carrying out the purposes of this decree: *Provided*, that no such stock of Panhandle Eastern shall be divested by transfer to any competitor of Panhandle Eastern or without prior notice and full disclosure of the facts to petitioner."

Section IV provides:

"That the defendants be and they are hereby perpetually enjoined from restraining or interfering in any manner in the freedom of Panhandle Eastern to contract or to finance or arrange the financing of all contracts, extensions (including the proposed new line to Detroit, whether or not built and owned by it), repairs, maintenance, service, or improvements necessary in its business through or with any firm, person or corporation with whom it may choose to deal (and to that end any such financial or contractual arrangements made by Panhandle Eastern to consummate the contract dated August 31, 1935, with the Detroit City Gas Company shall be subject to the approval of the trustee who shall receive, and consider the advisability of, alternative methods of financing from any responsible underwriter);

"That if such contracts be made with or financial assistance be secured from Columbia Gas, such contracts may be made or financial assistance furnished only upon terms or conditions which do not in any way, directly or indirectly, presently or potentially, confer upon Columbia Gas any voting rights, control or participation in the management of Panhandle Eastern or confer any rights of ownership in the works or properties of Panhandle Eastern except as security for the investment; and in the event that Columbia Gas shall, with respect to any contract or any contractual rights of any kind whatsoever or any property held as security or used in connection with any contract, in any way prevent the free transportation, sale, and distribution of gas by Panhandle Eastern, then upon application to this Court or any court of competent jurisdiction Panhandle Eastern shall have the right (1) to the immediate appointment of a trustee to hold such contract rights or property subject to the purposes and provisions of this decree; (2) to immediate specific performance of any and all contracts with Columbia Gas; and (3) to immediate injunction, both temporary and final, as well as any other appropriate remedy at law or in equity, including any remedy hereunder."

Reference is made to Item 6, under the heading "Certain Other Phases of Corporate History", for a statement with respect to possible change in ownership of the Registrant's common stock and Class A and Class B preferred stock now held, as above stated, by Gano Dunn as Trustee for Columbia Oil & Gasoline Corporation.

HISTORY AND BUSINESS

5. Outline briefly the general character of the business done and intended to be done by the registrant and its subsidiaries.

The Registrant is engaged in the production, purchase, transmission and sale of natural gas, the major part of which is sold to gas transmission companies and to gas distribution companies for resale. The Registrant's principal natural gas transmission system, which was placed in practical operation in the early part of 1932, extends from the Amarillo gas field in the Texas Panhandle and from the Hugoton gas field in Southwestern Kansas through the States of Oklahoma, Kansas, Missouri and Illinois, to a point near Dana, Indiana, adjacent to the Illinois-Indiana boundary. The Registrant also operates, as a separate unit, a minor transmission system located in the general vicinity of Kansas City, Missouri.

The Registrant produces approximately one-half of its gas requirements and purchases the remainder from others.

29. Give the information required below as to any property acquired or to be acquired in whole or in part, directly or indirectly, not in the ordinary course of business, in consideration of any of the securities registered or of all or any part of the proceeds thereof.

(a) General character and location of such property.

(b) The names and addresses of the persons from whom acquired or to be acquired, specifying their relationship to the registrant, if any.

(c) The allocation of the consideration given or to be given in connection with each such acquisition, reasonably itemized.

Not applicable

MANAGEMENT AND CONTROL

30. (a) Names and addresses of all persons who are, or are chosen to become, directors and officers of the registrant. Indicate office held.

Officers

Name	Address	Office
Joe D. Creveling	90 Broad Street, New York, N. Y.	President
Gerard J. Neuner	1221 Baltimore Avenue, Kansas City, Mo.	Vice President in Charge of Operations
Robert D. Field	502 Amarillo Building, Amarillo, Texas	Vice President
Leith S. Watkins	90 Broad Street, New York, N. Y.	Secretary and Controller
Louis F. Speer, Jr.	90 Broad Street, New York, N. Y.	Treasurer and Assistant Secretary
Norman F. Paxton	1221 Baltimore Avenue, Kansas City, Mo.	Assistant Secretary and Assistant Treasurer
Charley D. Jellings	1221 Baltimore Avenue, Kansas City, Mo.	Assistant Secretary
Raymond A. Ransom	90 Broad Street, New York, N. Y.	Assistant Secretary
William P. Clare, Jr.	44 Wall Street, New York, N. Y.	Vice President
A. Tirney Savage	44 Wall Street, New York, N. Y.	Assistant Secretary

Directors

Name	Address
Robert E. Bulkley	Bulkley Building, Cleveland, Ohio
Joe D. Creveling	90 Broad Street, New York, N. Y.
A. Faison Dixon	120 Broadway, New York, N. Y.
Gano Dunn	80 Broad Street, New York, N. Y.
William G. Maguire	120 Broadway, New York, N. Y.
Walter G. Mortland	400 Park Avenue, New York, N. Y.
Richard C. Patterson, Jr.	1270 Sixth Avenue, New York, N. Y.
Robert C. Winmill	One Wall Street, New York, N. Y.

(b) State as to each such person named or chosen to be a director or officer whether he has consented thereto.

All of the above named persons are now serving as indicated above.

NOTE. Reference is hereby made to Item 6, under the caption "Certain Other Phases of Corporate History", for a statement of the names of the seven persons agreed upon by the Department of Justice and Columbia Oil & Gasoline Corporation as the proposed new directors of Columbia Oil & Gasoline Corporation, certain of whom would be elected by Columbia Oil & Gasoline Corporation as directors of the Registrant, if the plan mentioned under said caption becomes effective. The Registrant has no information as to whether any or all of said seven persons have consented or will then consent to be directors of the Registrant.

31. Describe briefly the business experience of the principal executive officers for the last five years.

Joe D. Greveling, President, has been President of the Registrant since June 1936. Prior to that time he was in charge of all natural gas operations of Cities Service Company for approximately seventeen years.

Gerard J. Nooger, Vice-President in Charge of Operations, has been in the employ of the Registrant since June 1, 1931, first as Counsel and then as Vice-President and Counsel and later as Vice-President in Charge of Operations.

Leith V. Watkins, Secretary and Controller, has been in the employ of the Registrant since 1931, first as Assistant Secretary and Assistant Treasurer, then as Secretary and Treasurer, and since February 10, 1937, as Secretary and Controller. From June 7, 1933 to March 10, 1937, he was also Secretary and Treasurer of Columbia Oil & Gasoline Corporation and Secretary and Assistant Treasurer of its subsidiaries.

Louis F. Sperry, Treasurer and Assistant Secretary, has been in the employ of the Registrant as Treasurer since February 1937, and during the next preceding two years was Vice-President of the National Bank of New Jersey, New Brunswick, New Jersey, and during the next preceding [illegible] was Manager of Guaranty Company of New York, 31 Nassau Street, New York City.

32. Dates of, parties to, and general effect briefly and concisely stated of all material management and general supervisory contracts now in effect providing for management of, or services to, the registrant.

None.

33. Give the information required below for all persons owning of record or beneficially more than ten per cent of any class of voting stock of the registrant.

As of: December 31, 1940

(Owner of Record) Name and address	Beneficial Owner (if known) Name and address	Title of Issue	Amount Owned	Percent of the class
Geo. Dunn, Trustee for Columbia Oil & Gasoline Corporation, appointed pursuant to Decree dated January 29, 1936 in Cause No. 1092 in Equity in the District Court of the United States for the District of Delaware 80 Broad Street, New York, N. Y.	Columbia Oil & Gasoline Corporation, 822 Delaware Trust Building, Wilmington, Delaware	Common	404,326	50.1
		Preferred Class A	100,000	100
		Class B	20,000	100
Missouri-Kansas Pipe Line Company, Room 248, Delaware Trust Building, Wilmington, Delaware	Owner of Record is Beneficial Owner	Common	330,475	42.0

The notes in Item 4 (b) are hereby incorporated herein by reference.

EXHIBIT 106

HISTORICAL FINANCIAL INFORMATION

45. Furnish the information required below as to the respective captions on the registrant's balance sheet, the balance sheet of the registrant and its subsidiaries consolidated, and each individual or group balance sheet required to be furnished for unconsolidated subsidiaries:

(a) If, since January 1, 1922, there have been any increases or decreases in Investments, in Property, Plant and Equipment, or in Intangible Assets, resulting from substantially revaluing such assets, state:

(i) In what year or years such revaluations were made.

(ii) The amounts of such write-ups, or write-downs, and the accounts affected, including the contra entry or entries.

(iii) If in connection with such revaluations any adjustments were made in related reserve accounts, state the accounts and amounts with explanations.

On September 3, 1930 the Board of Directors of the Registrant authorized the revaluation of its gas sales and purchase contracts as determined by independent geologists and petroleum engineers engaged by the Registrant, which resulted in an increase in the asset account and a credit to capital surplus of $10,357,713.50. In March 1932, in accordance with a resolution of the Board of Directors of the Registrant, on March 29, 1932, this entry recording the revaluation was reversed thereby eliminating such appreciation from the accounts of the Registrant.

(b) If, since January 1, 1922, there have been restatements of Capital Stock, state the amounts of such restatements, and the contra entries. If, since January 1, 1922, there has been an original issue of Capital Stock, any part of the proceeds of which was credited to surplus, state such amount.

The original authorized issue of 10,000 shares of no par value common stock of the Registrant was issued in consideration for a gas lease at an assigned value of $1,000 as approved by the Board of Directors on January 2, 1930.

On June 2, 1930, 5,100 shares of such common stock were donated to the Registrant, which shares were then reissued to Missouri-Kansas Pipe Line Company. In connection therewith, the Registrant recorded a charge against its open account with Missouri-Kansas Pipe Line Company in the amount of $50,000, wrote off the value of $1,000 originally assigned to gas leases and credited the remainder, $49,000, to capital surplus.

On October 28, 1930 the Board of Directors assigned a paid-in value of $100.00 to the 10,000 shares of stock outstanding and authorized a transfer of $49.00 from capital surplus to the capital stock account.

(c) If, since January 1, 1922, any substantial amount or amounts of Bond Discount and Expense, on issues still outstanding, have been written off earlier than as required under any periodic amortization plan, give the following information: (a) title of issue; (b) date of such write-off; (c) amount written off; (d) to what account charged.

None.

LETTER OF OPINION

PANHANDLE EASTERN PIPE-LINE COMPANY,
Kansas City, Missouri.

We have reviewed the foregoing answers to Item 45 of this registration statement and, in connection therewith, we have made a review of the accounts recording property, plant and equipment, intangibles, reserves for depreciation, depletion and amortization, reserve for amortization of gas sales and purchase contracts, investments, reserve for investments, debt discount and expense and capital stock of the Registrant, for the period from December 23, 1929 (date of incorporation of Panhandle Eastern Pipe Line Company) to December 31, 1940.

In our opinion, based upon such review, the foregoing statement fairly presents the information required to be submitted in response to Item 45 as outlined in the Regulations of the Securities and Exchange Commission.

Kansas City, Missouri,
January 25, 1941.

ARTHUR ANDERSEN & CO.
ARTHUR ANDERSEN & CO.

EXHIBIT 106.

AUDITORS' CERTIFICATE

We have examined the balance sheet of Panhandle Eastern Pipe Line Company (a Delaware corporation, hereinafter referred to as the "registrant") as of December 31, 1940, the consolidated balance sheet of the registrant and its subsidiaries as at that date, and the statements of income and surplus of registrant and its subsidiaries for the three years ended that date. In connection therewith we have examined or tested accounting records of the companies and other supporting evidence and have reviewed the system of internal control and the accounting procedures of the companies by methods and to the extent we deemed appropriate, but we did not make a detailed audit of the transactions.

In our opinion the accompanying balance sheets and related statements of income and surplus, together with the schedules and items referred to thereon, fairly present the financial position of the companies at December 31, 1940, and the results of their operations for the three years ended that date, in conformity with generally accepted accounting principles consistently maintained by the companies during the periods under review.

Kansas City, Missouri,
January 25, 1941.

BALANCE SHEET NOTES
REGISTRANT AND CONSOLIDATED

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANIES

4053

NOTES TO THE BALANCE SHEETS ATTACHED TO AND MADE AN INTEGRAL PART OF THE BALANCE SHEET (REGISTRANT ONLY) AND OF THE CONSOLIDATED BALANCE SHEET

As of December 31, 1940

A. (1) Property, plant and equipment is stated at cost except for $2,417,948.52 thereof assigned by the Board of Directors to assets acquired as of August 31, 1930 as a capital contribution, and intangibles are stated at cost except for $2,598,402.19 thereof assigned by the Board of Directors to gas sales and purchase contracts acquired as of August 31, 1930 as a capital contribution.

(2) Investments in subsidiary companies are stated at cost. Securities representing the Registrant's investment in subsidiary companies are pledged as collateral to the First Mortgage and First Lien Bonds, as follows:

Illinois Natural Gas Company, common stock, no-par value, 28,000 shares	$2,635,391.43
Central Distributing Company, common stock, no-par value, 100 shares	59,000.48
Central Distributing Company, income demand note	250,000.00

In January, 1941, the Registrant received 807,367 shares of common stock, of a par value of 42 cents each, of Central Distributing Company in exchange for its former investment in that company (represented by no par common stock of $59,000.48, a note receivable of $250,000.00 and a demand loan of $25,000.00) and $5,093.71 additional cash investment. These shares were then distributed as a dividend to the Registrant's common stockholders, on a share for share basis, with a concurrent charge to earned surplus of $339,094.14.

(3) The amounts at which property, plant and equipment, intangibles and investments in subsidiary companies are stated do not purport to represent the current realizable value thereof.

B. Debt discount and expense in process of amortization at December 31, 1940 consists of:

Discount and expense applicable to bond issue redeemed prior to original maturity of October 1, 1950 in process of amortization over the original life of such issue		$ 898,578.76
Items being amortized on the basis of bonds outstanding over the life of the First Mortgage and First Lien Bonds due March 1, 1952—		
Call premium on retired issue	533,736.55	
Discount and expense on present outstanding issue	797,007.43	
		$2,229,322.74

C. Surplus is restricted by the Certificate of Incorporation as to payment of common stock and participating dividends, in the amount of $3,041,457.38. In the opinion of counsel for the Registrant, the requirements of Delaware law impose no restrictions on surplus by reason of the excess ($1,100,000 at December 31, 1940) of the liquidating value over the par value of its preferred stock. Class A preferred stock may be redeemed at any time in whole or in part at $100 per share if redeemed on or before July 1, 1941 or $110 per share thereafter.

D. At December 31, 1940 there were 1,285 unissued shares available for exercise of purchase option at $25.00 a share.

E. Contingent liabilities:

Effective January 1, 1940, the Registrant adopted a retirement annuity plan for employees (including officers) who had not attained age sixty-five on that date, by means of a group annuity contract with a life insurance company, which provides, among other things, for (a) premium payments in respect of current annuities and (b) the purchase by payments over a period of years of additional annuities based on age and length of prior employment, both at the expense of the Registrant. Amounts charged to the income accounts for the year 1940 aggregated $168,700 of which $100,000 applied to past service annuities. The total cost of the additional annuities based on length of prior employment may vary according to the dates of payments but is estimated by the Registrant at approximately $630,000 (based on a payment period of approximately twenty years). The plan by its terms is subject to change or discontinuance by the Registrant at any time.

Unrecorded items in dispute aggregate approximately $60,000. The Registrant represents that there were no other contingent liabilities not reflected in the balance sheet at December 31, 1940, except those set forth in contracts for the purchase and sale of gas.

F. In the consolidated balance sheet the accounts of all subsidiaries of the Registrant have been consolidated with the accounts of the Registrant. The Registrant's equity in the net assets of such subsidiaries, as shown by the books of the latter, exceeds the aggregate investment in subsidiaries consolidated, as shown in the Registrant's books, by $132,006.22, representing undistributed earnings of subsidiaries since dates of acquisition which has been credited to earned surplus in consolidation.

INCOME ACCOUNT NOTES
CONSOLIDATED

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANIES

4987

NOTES TO THE INCOME ACCOUNT ATTACHED TO AND MADE A PART OF THE CONSOLIDATED INCOME ACCOUNT

For the Years Ended December 31, 1938, 1939, and 1940

A The amounts provided by the Registrant and its subsidiaries for depreciation, depletion and amortization of property, plant and equipment are fixed annually in accordance with resolutions of the Board of Directors. Specific rates based upon the age and estimated life of the properties were not used in determining the amounts. The management has been informed by P. McDonald Biddison, an independent consulting engineer of Dallas, Texas, that, in his opinion, the annual amounts provided for depreciation, depletion and amortization are reasonable for this purpose. The provisions for the years 1938, 1939, and 1940 were equal to 2.98%, 3.20% and 3.16% of consolidated property, plant and equipment accounts at the beginning of the respective years. The Registrant's Certificate of Incorporation, as amended, provides substantially that no dividends on the common stock or any participating dividends on the preferred and common stocks may be paid except out of net surplus earned subsequent to December 31, 1935 remaining after there shall have been deducted therefrom as provisions for depreciation, depletion and amortization of property, plant and equipment, an aggregate accrual equal to one-third of 1% per month (on monthly balances) of the consolidated tangible property of the Registrant and its subsidiaries. The provisions for depreciation, depletion and amortization of tangible property as computed in accordance with the Registrant's Certificate of Incorporation would have amounted to $2,337,507.71, $2,354,588.33 and $2,378,393.37 for the years 1938, 1939, and 1940, respectively. The amounts claimed by the Registrant and its subsidiaries for depreciation for Federal income tax purposes are larger than the provisions as set forth in the income account.

B The Registrant has provided amortization of gas sales and purchase contracts in the amount of $24,419.05 per month, which will extinguish the net ledger balance at December 31, 1955 ($2,930,286.40) over a period of ten years. Of the original amount of gas sales contracts—other, $171,076.00 is being amortized over a period of fifteen years from January 1, 1937 and the remainder is being amortized primarily over the lives of the respective contracts. No provision has been made for the amortization of organization expense and miscellaneous intangibles.

C It is the practice of the Registrant to charge to maintenance the repairs of property and replacements and renewals of items determined to be less than units of property. Replacements and renewals of items considered to be units of property are charged to the property, plant and equipment accounts. At the time properties are disposed of, the cost (or estimated cost), less net salvage value, of property retired is charged to the reserve for depreciation, depletion and amortization of property, plant and equipment.

D No profits or losses on sales or other dealings between parents or subsidiaries of the Registrant are included in the consolidated income accounts. Inter-company revenues have been eliminated in consolidation.

E Consists of—

	1938	1939	1940
Amortization of debt discount and expense on issue due October 1, 1950 redeemed May 1, 1937	$ 92,161.80	$ 92,161.80	$ 92,161.80
Amortization, on call premium applicable to above issue	91,281.89	89,317.23	87,382.86
Amortization of debt discount and expense on present outstanding issue	136,262.81	133,373.84	130,484.88
	$319,676.50	$314,852.87	$310,029.24

NOTES:

A. Maintenance and repairs, and provisions for depreciation, depletion and amortization, are exclusive of automobile maintenance, repairs and depreciation charged to the automobile expense clearing account and redistributed, together with various other charges, to various operating, construction and other accounts.

B. Rents, for the years 1938 and 1939, do not include certain rents, the aggregate amount of which is not significant, which are included in various operating expenses but not identified as rents; these rents, however, are segregated as such for the year 1940.

COMMITTEE ON STOCK LIST
NEW YORK STOCK EXCHANGE

PANHANDLE EASTERN PIPE LINE COMPANY

FIRST MORTGAGE AND FIRST LIEN 3% BONDS, SERIES B, DUE NOVEMBER 1, 1960

New York, New York, February 28, 1941

Panhandle Eastern Pipe Line Company (hereinafter sometimes referred to as the "Company") hereby makes application for the listing on the New York Stock Exchange of $12,000,000 principal amount of its First Mortgage and First Lien 3% Bonds, Series B, dated November 1, 1940, and due November 1, 1960, all of which are now outstanding. Reference is made to the Company's previous application A-10896, dated May 14, 1937.

OPINION OF COUNSEL

Edward N. Goodwin, Esq., 44 Wall Street, New York, New York, General Counsel of the Company, has furnished an opinion that the Mortgage and Deed of Trust, dated November 1, 1940 between the Company and City Bank Farmers Trust Company, as Corporate Trustee, is in due and legal form and constitutes a valid, legal and binding obligation of the Company and that the First Mortgage and First Lien 3% Bonds, Series B, secured thereby are valid and binding obligations of the Company payable in accordance with their terms.

STATUS UNDER FEDERAL ACTS

The $12,000,000 principal amount of First Mortgage and First Lien 3% Bonds, Series B, for which listing application is hereby made, have been registered under the Securities Act of 1933, as amended (File No. 2-4579 of the Securities and Exchange Commission). The Registration Statement (Form A-2) therefor became effective on January 29, 1941.

Application is being filed with the Securities and Exchange Commission on Form 8A for registration of these bonds on the New York Stock Exchange in accordance with the provisions of the Securities and Exchange Act of 1934, as amended.

The Mortgage and Deed of Trust securing these bonds has been qualified under and conforms with the requirements of the Trust Indenture Act of 1939 and the rules and regulations of the Securities and Exchange Commission adopted under said Act.

The Company is exempt from the Public Utility Holding Company Act of 1935 with respect to the issue, sale and delivery of these bonds.

DEPRECIATION POLICY

The formulae consistently used by the Company and its Subsidiary Companies beginning with the year 1937 to develop an amount to be recommended to the Board of Directors as a proper provision for depreciation, depletion and amortization gives consideration to the "wasting asset" theory and provides depletion on operated leaseholds on the basis of units of gas withdrawn, amortization of investment in unoperated land rights by the use of a composite life of ten years for such land rights, amortization of gas sales and purchase contracts at a specific monthly rate as provided in the Company's Certificate of Incorporation and in amounts to conform to the contract period in certain instances, and an amount for the other transmission system properties determined by its Board of Directors which recognizes amortization in addition to a composite rate based on the age and estimated life of the properties. The properties of the aggregate annual provision, as well as the reasonableness of the total reserves provided to date, has been substantiated by an opinion from an independent Consulting Engineer. Unless required to do otherwise by some regulatory authority of competent jurisdiction the Company expects to continue this policy.

December 13th, 1937.

Mr. N. F. Paxton, Assistant Secretary,
Panhandle Eastern Pipe Line Company,
101 West 11th Street,
Kansas City, Missouri.

Provision for Retirements, Depletion and Amortization for Year 1938.

Dear Mr. Paxton:

In keeping with your request I have observed and compared the amount which the officers of the Panhandle Eastern Pipe Line Company expect to suggest as the proper provision for retirements, depletion and amortization on a consolidated basis for the year 1938 and have found this amount, $2,055,000.00, is within approximately $60,000.00 of the amount I consider proper and shall include in the report on the valuation of Panhandle System properties which I have now in process of completion.

From this examination and comparison I can state that if the company's present plan for making such provision is continued, the annual amount for future years will be approximately equal to that of my estimate.

Yours very truly,

P. McDONALD BIDDISON,
Consulting Engineer.

Provision for Retirements, Depletion and Amortization

Dear Mr. Paxton:

In keeping with your request, I have reviewed the amounts which the officers of Panhandle Eastern Pipe Line Company have suggested as a proper provision for retirements, depletion and amortization on a consolidated basis for the year 1939 and have found this amount, $2,100,000, (which includes provision for amortization of Gas Sales and Purchase Contracts) to be a reasonable provision for depreciation, depletion and amortization based on the estimated life of the properties. Further, in my opinion, the reserves for retirements, depletion and amortization at December 31, 1938, are reasonable reserves based on age and estimated life of the properties.

Yours very truly,

P. McDONALD BIDDISON,
Consulting Engineer.

Provision for Retirements, Depletion and Amortization

Dear Mr. Neuner:

In keeping with your request, I have reviewed the amounts which the officers of Panhandle Eastern Pipe Line Company have suggested as a proper provision for retirements, depletion and amortization on a consolidated basis for the year 1940 and have found this amount, $2,200,000, (which includes provision for amortization of Gas Sales and Purchase Contracts) to be a reasonable provision for depreciation, depletion and amortization based on the estimated life of the properties. Further, in my opinion, the reserves for retirements, depletion and amortization at December 31, 1939, are reasonable reserves based on age and estimated life of the properties.

Yours very truly,

P. McDONALD BIDDISON,
Consulting Engineer

PMcDB.

Provision for Retirements, Depletion and Amortization

Dear Mr. Neuner:

In keeping with your request, I have reviewed the amounts which the officers of Panhandle Eastern Pipe Line Company have suggested as a proper provision for retirements, depletion and amortization on a consolidated basis for the year 1941 and have found this amount, $2,400,000, (which includes provision for amortization of Gas Sales and Purchase Contracts) to be a reasonable provision for depreciation, depletion and amortization based on the estimated life of the properties. Further, in my opinion, the reserves for retirements, depletion and amortization at December 31, 1940, are reasonable reserves based on age and estimated life of the properties.

Yours very truly,

P. McDONALD BIDDISON,
Consulting Engineer

* Additional Field Horsepower will be required to maintain the same suction or cylinders changed at Sneed, or both.

** Present type compressors cannot be operated successfully at such pressures therefore new equipment will be required to compress the gas when pressures fall below 50# Gauge.

Gas used by Carbon Black Plants is included in column showing "Gas Used By Gasoline Plants."

Amounts of gas shown through years 1926-1931 estimated by Victor Cotner - "Geology and Occurance of Natural Gas in Amarillo District, Texas." Bulletin A.A.P.G. Vol. 17, No. 8, August 1933 p.p. 877-906.

Amounts of gas shown through years 1932-1940 - Gas used by pipe lines and gasoline plants from records of Railroad Commission of Texas. Balance of data estimated from weekly oil field scout reports.

All figures through 1940 compiled by C. J. Peterson.

Amounts of gas shown through years 1941-1956 estimated by C. H. Hinton.

[fol. 14789] Exhibit 142.--Substituted.

In the tabulation shown herein the carrying charges on the cost of reserves, the cost of existing facilities and the cost of facilities to be hereafter added, have not been taken into account; nor has consideration been given to amortization, depletion, depreciation and replacements with respect to these properties. The apportionment of transportation costs in these tabulations is based on the ratio of gas produced or gas purchased, as the case may be, to the total gas produced and purchased.

SUMMARY OF COST OF GAS PRODUCED AND PURCHASED PER M C F BY FIELDS - BASIC LOAD FOR THE YEARS 1940 to 1946 INCLUSIVE

(Year 1940 - actual, Year 1941 - 6 months actual and 6 months estimated, and the Years 1942 to 1946 inclusive - estimated).

[fol. 14795] Exhibit 143.—Substituted.

In the tabulation shown herein the carrying charges on the cost of reserves, the cost of existing facilities and the cost of facilities to be hereafter added, have not been taken into account; nor has consideration been given to amortization, depletion, depreciation and replacements with respect to these properties. The apportionment of transportation costs in these tabulations is based on the ratio of gas produced or gas purchased, as the case may be, to the total gas produced and purchased.

PANHANDLE EASTERN PIPE LINE COMPANY

COMPILED REGISTRATION STATEMENT

COVERING ISSUES OF $10,000,000 FIRST MORTGAGE AND FIRST LIEN 3% BONDS, SERIES C, DUE JANUARY 1, 1962

and

150,000 SHARES OF % CUMULATIVE PREFERRED STOCK (Par Value $100 per share)

This document is a reprint of the Registration Statement originally filed with the Securities and Exchange Commission on December 24, 1941, as amended on January 20, 1942, and which became effective on January 21, 1942, as of January 12, 1942 for the purpose of the Company's Invitation for Bids for the Purchase of the Bonds and Stock, except that the exhibits, the statements of eligibility and qualification of the Trustees and the Prospectus which were filed are not included herein. The signatures which appear on page 96 are those of the directors and officers signing the original statement filed December 24, 1941. Information as to any other public offering of the Bonds and Stock will be given by post-effective amendment to the Registration Statement.

This document is not official; it has been prepared only for the convenience of the Company and of prospective bidders; and it is not for general circulation. It does not take the place of the Prospectus and must not be used as a Prospectus. The Securities and Exchange Commission has not made any finding that the statements in the Registration Statement and the amendment thereto are correct, nor has it approved or disapproved the securities registered thereunder.

ORGANIZATION

1. **Exact name of registrant:**

PANHANDLE EASTERN PIPE LINE COMPANY (herein sometimes called "the Company").

2. **Address of principal executive offices:**

4224 Baltimore Avenue, Kansas City, Missouri, and 90 Broad Street, New York, New York.

3. **The state or other sovereign power under which incorporated, and the date of incorporation:**

State of Delaware, under name Interstate Pipe Line Company, on December 23, 1929. Name changed to Panhandle Eastern Pipe Line Company on May 9, 1930.

4. **List the following and indicate the respective percentages of voting power as required by the Instructions:**

(a) All subsidiaries of the registrant. (1)	Percentage of Voting Power of Securities Owned by Panhandle Eastern Pipe Line Company
Illinois Natural Gas Company, an Illinois corporation	100%

(b) All parents of the registrant.	Percentage of Voting Power of Securities of Panhandle Eastern Pipe Line Company Owned Percentage Within Classes	To Total (3)
Gano Dunn, Trustee for Columbia Oil & Gasoline Corporation appointed pursuant to Decree dated January 29, 1936, in Cause No. 1099 in Equity in the District Court of the United States for the District of Delaware (4)		
Common Stock	50.1%	56.1%
Preferred Stock		
Class A (2)	100%	
Class B	100%	
Missouri-Kansas Pipe Line Company.		
Common Stock	42.0%	37.0%

(1) The Company intends to use a part of the proceeds of the sale of the securities being registered hereunder to acquire 100% of the outstanding securities of Michigan Gas Transmission Corporation, a Delaware corporation and of Indiana Gas Distribution Corporation, an Indiana corporation.

(2) The Company intends to use a part of the proceeds of the sale of the Cumulative Preferred Stock being registered hereunder to redeem all of its presently outstanding Class A Preferred Stock.

(3) This percentage relates to voting power on all matters except the election of directors. As to the latter the Class B Preferred Stock has the right to elect two directors, the balance being elected by the Common Stock by cumulative voting.

(4) The Decree states, in effect, that its purposes are to provide against domination or control, direct or indirect, in the affairs of the Company by Columbia Gas & Electric Corporation, and the maintenance of the Company in a position of free and independent action in the production, transmission, sale and distribution of natural gas in competition with others.

The Company is unable to make any representation with respect to the degree of control exercised by Columbia Gas & Electric Corporation over Columbia Oil & Gasoline Corporation. However, the Company is informed that Columbia Gas & Electric Corporation owns all of the outstanding Twenty-Year Debentures of Columbia Oil & Gasoline Corporation, and all the Preferred Stock of Columbia Oil & Gasoline Corporation, the holders of which, voting as a class, are entitled to elect the greatest number of directors which shall constitute a minority, and that the holders of the Common Stock of Columbia Oil & Gasoline Corporation, none of which is owned by Columbia Gas & Electric Corporation, are entitled, voting as a class, to elect the smallest number of directors which shall constitute a majority, but none of the directors

so elected by the holders of the Common Stock may be a director, officer or employee of Columbia Gas & Electric Corporation or any of its subsidiaries.

The following provisions of the Decree are quoted to indicate the relationship to the Company of Columbia Oil & Gasoline Corporation and Columbia Gas & Electric Corporation: Such provisions as do not affect this relationship are omitted.

Section II provides:

"That the defendants be and they are hereby perpetually enjoined from exercising, or attempting, individually or collectively, directly or indirectly, to exercise any dominion or control over Panhandle Eastern, and from restraining, or interfering in any manner with the free and independent action of said Panhandle Eastern in the production, transportation, sale or delivery of natural gas to any person, corporation, community or section of the United States; from holding, acquiring, voting or in any manner acting as the owners, directly or indirectly, of the whole or any part of the stock, or other share capital, or bonds, property or assets of Panhandle Eastern or any other company, corporation, association or organization owning any substantial amount of its securities; and from participating in any way, directly or indirectly, or from exercising any control, direction, supervision, or influence, in the management or control of Panhandle Eastern; except

* * * * * * *

"(c) That Columbia Gas and defendant Hillman may own or acquire obligations, without present or potential voting rights, of said Panhandle Eastern, except that Columbia Gas is hereby enjoined and restrained in connection with enforcing any rights under said obligations with respect to principal, interest or sinking fund, from acquiring any of the pipe line or other physical assets of Panhandle Eastern;

"(d) That Columbia Oil may own or acquire stock or obligations in Panhandle Eastern and exercise voting rights appurtenant thereto (and defendant Bay may be and exercise the lawful rights of an officer of Panhandle Eastern), subject to the further terms and provisions of this decree, but Columbia Gas is hereby perpetually enjoined and restrained from acquiring any interest in such stock, by operation of law, or in connection with enforcing any lien created through the present or future existence of any debt, whether funded or unfunded, of Columbia Oil to Columbia Gas, or otherwise;

"(e) That, when Columbia Gas has effectively divested itself of all control, direct or indirect, legal or practical, of Panhandle Eastern by no longer owning stock of any class having present or potential voting rights in Columbia Oil, upon the approval of this Court Columbia Oil shall no longer be subject to the restrictive clauses of this Section II;"

Section III provides

"That Gano Dunn is hereby nominated, constituted and appointed Trustee for the purposes and with the powers and duties set forth in this Section III;

"That within 10 days after the entry of this decree Columbia Oil shall execute, and deposit with said Trustee the agreements and offers executed by it in accordance with its agreements set forth in Section V of the stipulation pursuant to which this decree is entered;

"That within 10 days after the entry of this decree Columbia Oil shall transfer all of its stock now owned and thereafter all stock subsequently acquired in Panhandle Eastern, having present or potential voting rights, to said Trustee to hold the legal title to said stock and to exercise all the rights and privileges incidental to the absolute ownership thereof upon the following terms and conditions:

"(a) To vote said stock for the election of as many directors of Panhandle Eastern as the number of shares thereof may be entitled to elect; *Provided*, that one of the directors so elected shall be the trustee, and that the remainder shall be selected from among persons recommended by the beneficial owner of said stock, in conference and with the advice of the Trustee, but not including any of the individual defendants herein or any one except with the approval of the Trustee and this Court, who after January 1, 1931, has been or hereafter becomes an officer, director, agent or employee of Columbia Gas; and that as to the directors so selected, the trustee is empowered to remove and replace such directors with

others of his own choosing upon his own motion, if in his judgment such action is necessary in the interest of Panhandle Eastern or for the effectuation of the purposes of this decree; subject, however, in this as well as in the exercise of all other powers to the authority of this Court upon the motion and showing of any party hereto, or upon its own motion, to restrain said Trustee from abuses of sound discretion, in view of the purposes of this decree and the law under which it is entered, or in case said Trustee does not act in good faith hereunder;

"(b) To vote said stock upon all other questions and matters in which the stock is entitled to vote, as directed by the beneficial owners thereof, except when such directions are inconsistent with the purposes of this decree;

* * * * * * *

"(e) To pay over to Columbia Oil all dividends received upon said stock, except that dividends in the form of stock having present or potential voting rights shall be retained by the trustee subject to the same terms and conditions as the other shares held hereunder;

"(f) To exercise all rights to subscribe to additional stock or other securities of Panhandle Eastern as Columbia Oil may direct;

* * * * * * *

"That the trust hereby created shall be and remain in full force and effect until terminated with the approval of this Court when (1) Columbia Gas has effectively divested itself of all control, direct or indirect, legal or practical, of Panhandle Eastern by (a) no longer owning stock of any class having present or potential voting rights in Columbia Oil or (b) by Columbia Oil divesting itself of ownership of all stock of Panhandle Eastern; or when (2), under the circumstances then existing, the continuation of said trust is no longer essential or necessary in carrying out the purposes of this decree; *Provided*, that no such stock of Panhandle Eastern shall be divested by transfer to any competitor of Panhandle Eastern or without prior notice and full disclosure of the facts to petitioner."

Section IV provides:

"That the defendants be and they are hereby perpetually enjoined from restraining or interfering in any manner in the freedom of Panhandle Eastern to contract or to finance or arrange the financing of all contracts, extensions (including the proposed new line to Detroit, whether or not built and owned by it), repairs, maintenance, service, or improvements necessary in its business through or with any firm, person or corporation with whom it may choose to deal (and to that end any such financial or contractual arrangements made by Panhandle Eastern to consummate its contract dated August 31, 1935, with the Detroit City Gas Company shall be subject to the approval of the trustee who shall receive, and consider the advisability of, alternative methods of financing from any responsible underwriter);

"That if such contracts be made with or financial assistance be secured from Columbia Gas, such contracts may be made or financial assistance furnished only upon terms or conditions which do not in any way, directly or indirectly, presently or potentially, confer upon Columbia Gas any voting rights, control or participation in the management of Panhandle Eastern or confer any rights of ownership in the works or properties of Panhandle Eastern except as security for the investment; and in the event that Columbia Gas shall, with respect to any contract or any contractual rights of any kind whatsoever or any property held as security or used in connection with any contract, in any way prevent the free transportation, sale, and distribution of gas by Panhandle Eastern, then upon application to this Court or any court of competent jurisdiction Panhandle Eastern shall have the right (1) to the immediate appointment of a trustee to hold such contract rights or property subject to the purposes and provisions of this decree; (2) to immediate specific performance of any and all contracts with Columbia Gas; and (3) to immediate injunction, both temporary and final, as well as any other appropriate remedy at law or in equity, including any remedy hereunder."

Reference is made to Item 6, under the heading "Certain Other Phases of Corporate History", for a statement with respect to possible change in ownership of the Company's Common Stock and Class A and Class B Preferred Stock now held, as above stated, by Gano Dunn as Trustee for Columbia Oil & Gasoline Corporation. The Company intends to use a part of the proceeds of the sale of the Cumulative Preferred Stock being registered hereunder to redeem all of its presently outstanding Class A Preferred Stock.

An application for an order declaring that the Company is not a subsidiary, within the purview of the Public Utility Holding Company Act of 1935, of Columbia Gas & Electric Corporation and/or Columbia Oil & Gasoline Corporation and/or Missouri-Kansas Pipe Line Company has been denied by the Securities and Exchange Commission with respect to Columbia Gas & Electric Corporation and Columbia Oil & Gasoline Corporation and granted with respect to Missouri-Kansas Pipe Line Company.

The Company is informed that Columbia Gas & Electric Corporation is a subsidiary of The United Corporation as that term is defined in the Public Utility Holding Company Act of 1935. The Company is unable to make any representation with respect to the degree of control exercised by The United Corporation over Columbia Gas & Electric Corporation or Columbia Oil & Gasoline Corporation. However, the Company understands that approximately 19.6% of the common stock of Columbia Gas & Electric Corporation and approximately 3.6% of the common stock of Columbia Oil & Gasoline Corporation were beneficially held of record as of December 31, 1941 by The United Corporation.

HISTORY AND BUSINESS

5. Outline briefly the general character of the business done and intended to be done by the registrant and its subsidiaries.

The Company is engaged in the production, purchase, transmission and sale of natural gas, the major part of which is sold to gas transmission companies and to gas distribution companies for resale. The Company's principal natural gas transmission system, which was placed in practical operation in the early part of 1932, extends from the Amarillo gas field in the Texas Panhandle and from the Hugoton gas field in Southwestern Kansas through the States of Oklahoma, Kansas, Missouri and Illinois, to a point near Dana, Indiana, adjacent to the Illinois-Indiana boundary. The Company also operates, as a separate unit, a minor transmission system located in the general vicinity of Kansas City, Missouri.

The Company intends to use a part of the proceeds of the sale of securities being registered hereunder to acquire all of the outstanding securities of Michigan Gas Transmission Corporation (a wholly-owned subsidiary of Columbia Gas & Electric Corporation). The natural gas pipe line system of Michigan Gas Transmission Corporation is located in the States of Indiana, Ohio and Michigan, and consists principally of pipe lines extending from the present eastern terminus of the Company's system at Dana, Indiana, to points near Detroit, Michigan, and Muncie, Indiana. Reference is hereby made to the answer to Item 29 for a brief statement as to the business and property of said corporation.

The Company produces approximately one-half of its gas requirements and purchases the remainder from others.

The Company's largest customer is Michigan Consolidated Gas Company (formerly Detroit City Gas Company), which company purchases from the Company the natural gas it resells through its distribution systems in Detroit and Ann Arbor, Michigan, and environs. Natural gas sold to Michigan Consolidated Gas Company is delivered by the Company to Michigan Gas Transmission Corporation at the latter's western terminus near Dana, Indiana, for transmission and redelivery to Michigan Consolidated Gas Company. During the 12 months ended September 30, 1941, such sales in M.C.F. to Michigan Consolidated Gas Company amounted to approximately 39% of the Company's total sales.

The Company has entered into a contract with Consumers Power Company in which it has, among other things, agreed to construct certain pipe lines in Michigan and to supply a major part of the natural gas requirements of Consumers Power Company for distribution in its Flint, Pontiac, Jackson, Kalamazoo, Owosso and Battle Creek Divisions. Natural gas to be sold through the Company's proposed Michigan pipe lines will be transported by Michigan Gas Transmission Corporation from a point near Dana, Indiana to the point of connection of that company's system with the Company's proposed Michigan lines.

The Company supplies natural gas to a number of communities in central Indiana and in northwestern Ohio, the more important customers being Central Indiana Gas Company and Richmond Gas Corporation. Deliveries of natural gas to the Company's customers located in Indiana and in Ohio are also made through Michigan Gas Transmission Corporation.

The Company also sells gas to Michigan Gas Transmission Corporation for resale by that company to certain distributing companies and municipalities in Indiana. The

facilities also included, among other things, the acquisition of additional gas reserves, the drilling of additional wells, and the construction of a gasoline extraction and gas dehydration plant. During this period approximately $21,000,000 was expended by the Company and its subsidiary for such expansion of facilities. During the year 1941 the Company authorized certain construction work of a similar nature, a large part of which is now in progress, involving expenditures then estimated at approximately $9,000,000. It is anticipated that the ultimate cost of such work may exceed such estimate by approximately 10%. At the present time the Company has priority ratings for material involved in such construction work considered by it to be generally satisfactory.

The following tabulation shows for the past 5 calendar years, and for the 12 months ended September 30, 1941, for the Company and its wholly owned subsidiary companies the sales of gas in M.C.F. (thousands of cubic feet) to customers by states and groups of states:

Year	Texas, Oklahoma and Kansas	Missouri	Illinois	Indiana and Ohio*	Michigan	Total
1936	2,500,332	6,803,511	7,257,283	6,229,747	3,957,058	26,747,931
1937	2,366,788	7,276,270	7,554,821	7,639,485	15,969,598	40,806,962
1938	2,955,385	6,857,223	6,601,142	8,739,715	16,032,297	41,185,762
1939	2,479,149	8,009,919	7,398,929	12,953,121	18,391,954	49,233,072
1940	2,120,646	8,860,840	8,557,633	14,574,370	22,281,273	56,394,762
12 months ended September 30, 1941	2,180,719	9,887,598	8,959,441	17,034,842	23,758,348	61,820,948

* Sales of gas in Ohio commenced in the year 1939 and amounted to 55,015 M.C.F. for that year and amounted to 150,693 M.C.F. in the year 1940. For the 12 months ended September 30, 1941, sales of gas in Ohio amounted to 182,924 M.C.F.

A considerable part of the increase in sales of gas indicated by the above table has been due to the commencement of natural gas service to communities not theretofore served with natural gas from the Company's system. Since January 1, 1936 such new natural gas service (directly and indirectly from the Company's system) has been extended to 64 communities having an aggregate population of approximately 2,323,000.

Reference is also made to the answer to Item 5 hereof for certain other developments within the preceding five years.

Certain Other Phases of Corporate History

Immediately prior to September 17, 1930, all of the capital stock of the Company was owned by Missouri-Kansas Pipe Line Company (hereinafter sometimes called "Mokan"). Pursuant to an agreement dated September 17, 1930, Mokan sold 50% of the Company's then outstanding (common) stock to Columbia Oil & Gasoline Corporation (hereinafter sometimes called "Columbia Oil"). Said agreement also provided for the financing of the Company, a part of which was an issue of $20,000,000 principal amount of Twenty Year Sinking Fund Mortgage Gold Bonds, Series A, 6%, which were sold to The National City Company, which sold these bonds to Columbia Oil. The latter disposed of them in 1936. These bonds were redeemed by the Company in 1937. On March 6, 1935, the United States Government instituted an anti-trust suit against Columbia Oil, Columbia Gas & Electric Corporation (hereinafter sometimes called "Columbia Gas"), George H. Howard, Philip G. Gossler, Charles A. Munroe, Thomas R. Weymouth, Thomas B. Gregory, Edward Reynolds, Jr., Burt R. Bay and John H. Hillman, Jr., alleging among other things that the defendants had dominated the Company for the purpose of preventing competition between the Company and Columbia Gas. In October, 1935, the Government amended its Bill of Complaint in said suit. This suit was terminated by Stipulation and Consent Decree entered January 29, 1936, a copy of which is incorporated by reference as Exhibit K-1 to this Registration Statement, to which reference is hereby made for a complete statement of its provisions. On July 18, 1935, Henry T. Bush and C. Ray Phillips, as Receivers of Mokan, instituted a suit for damages against Columbia Gas, Columbia Oil and certain individual defendants, claiming damages by reason of the alleged domination of the Company by these defendants. Said suit was settled on or about April 29, 1936; copies of the offer of settlement as extended and modified and of the acceptance thereof are incorporated by reference as Exhibit K-2 to this Registration Statement, to which reference is hereby made for a complete statement of their provisions.

The Company is informed that in the above-mentioned anti-trust suit the United States Government filed a supplemental complaint on or about December 21, 1938,

alleging among other things that since the entry of the decree of January 29, 1936, no steps of any kind had been taken toward the effective termination of all control by Columbia Gas of the Company, that the only effective way to restore and maintain a position of free and independent action for the Company is to require Columbia Gas to divest itself of all stock of any class having existing or potential voting rights in Columbia Oil, or to require Columbia Oil to divest itself of ownership of all stock of the Company, and that to accomplish the purpose of said decree it is necessary to supplement it by a further order requiring the formulation and submission to the Court for approval of a suitable plan or plans to accomplish such termination. The Company is further informed that in such supplemental complaint the Government prayed that a judgment be entered directing that Columbia Gas divest itself of all control, legal or practical, of the Company, and to that end that plans to accomplish such divestiture be submitted to the Court for approval and that the voting trust established pursuant to said decree of January 29, 1936, be re-constituted to make said Trustee a trustee for sale of the stock of the Company beneficially owned by Columbia Oil in the manner specified in such supplemental complaint. The Company is further informed that answers to such supplemental complaint were filed on behalf of defendants, containing, in effect, a general denial of the allegations in such supplemental complain. and certain affirmative defenses, and that the above-mentioned proceeding is still pending.

The Company is further informed that in the above-mentioned anti-trust suit the United States Government filed two notices of motion on or about May 15, 1939, one of said motions being to permit the Government to withdraw, without prejudice, the above-mentioned supplemental complaint filed on or about December 21, 1938, and the other of said motions being to vacate the decree of January 29, 1936, to permit the Government to serve and file an amended and supplemental complaint, and to maintain in statu quo pending adjudication of the issues tendered by said amended and supplemental complaint, the relationships among the defendants in such suit and Gano Dunn as Trustee appointed pursuant to the decree of January 29, 1936. The Company is further informed that said amended and supplemental complaint alleges among other things that said decree of January 29, 1936, failed to nullify elements of control over the Company by Columbia Gas which existed at the time of entry of such decree, that the Company has been precluded from engaging in commerce in natural gas and from competing in any manner with Columbia Gas and Columbia Oil in the States of Indiana, Michigan and Ohio, and that the acquisition of the capital stock of Michigan Gas Transmission Corporation by Columbia Gas has had the effect of restraining commerce in natural gas in said States and of tending to create therein a monopoly in natural gas; and that said amended and supplemental complaint prays that the court adjudge among other things that the defendants have violated the Sherman Anti-Trust Act and the Clayton Act in the manner therein specified, that Columbia Oil shall proceed forthwith to sell all interest which it may now have or may hereafter acquire in any securities of the Company, and that Columbia Gas shall proceed forthwith to sell all interest which it may now have or may hereafter acquire in any securities of Michigan Gas Transmission Corporation. The Company is further informed that defendants in such suit opposed such motion and that no decision thereon has as yet been rendered by the Court. The Company is further informed that the proceedings on the Government's supplemental complaint are still pending.

The Company is further informed that in the above-mentioned anti-trust suit Columbia Oil and Columbia Gas filed a notice of motion on or about June 20, 1939, for an order providing, among other things, that the decree of January 29, 1936, shall, upon the approval of the Court and of the Securities and Exchange Commission of the proposed plan annexed to the notice of motion, be modified in the manner set forth in such notice of motion, to meet the changed conditions resulting from the carrying out of such plan, such modification including the termination of the above-mentioned trusteeship of Gano Dunn of the Company's common stock and Class A and Class B preferred stock and the retransfer of said stock to Columbia Oil. The Company is further informed that such proposed plan provides, among other things, that Columbia Oil shall transfer to Columbia Gas substantially all of the assets of the former corporation other than the Company's said stock, that Columbia Oil will agree to use its best efforts to dispose of the Company's said Class A preferred stock, and that other action be taken as set forth in such proposed plan, with a view to nullifying any control over the Company by Columbia Gas which may have heretofore existed.

The Company is further informed that the proposed plan, mentioned in the next preceding paragraph, provides, among other things, that the number of directors of

Columbia Oil shall be no larger than the number of directors to which that corporation may be entitled upon the board of directors of the Company, and that the directors of Columbia Oil shall be designated by that corporation as its representatives upon the board of directors of the Company, and that such directors and the officers of that corporation shall be not objectionable to the Department of Justice. The Company is further informed that such plan also provides substantially as follows: Subject to the approval of the Securities and Exchange Commission, if required by law, Columbia Gas shall sell the stock and indebtedness of Indiana Gas Distribution Corporation and Michigan Gas Transmission Corporation owned by it to the Company at any time within one year from the date of the entry of an order approving such plan, if the Company wishes to buy the same, for a price equal to the actual investment of Columbia Gas therein, provided the Company also purchases at the same time the gas pipe line in Indiana belonging to The Ohio Fuel Gas Company for the price of $355,191; however, if during said year, Columbia Gas receives from other sources, not connected directly or indirectly with it, an offer satisfactory to it to purchase such stock and indebtedness, Columbia Gas will give the Company written notification of the proposed terms of sale and give the Company ninety days within which to meet such terms; if during such ninety-day period, the Company does not meet the terms of said outside offer, then Columbia Gas shall be free to accept said offer.

The Company is further informed that on July 10, 1939, when the above-mentioned motion filed on or about June 20, 1939, by Columbia Oil and Columbia Gas came on to be heard, the Court entered an order providing, in effect, (a) that the matter be referred to William Prickett, Esq., of Wilmington, Delaware, as Special Master, to consider said motion and the proposed modifications of the Decree of January 29, 1936, set forth in said motion, and to take testimony, hear arguments of counsel and make report to the Court of his findings of fact, conclusions of law and recommendations concerning said motion; (b) that said Special Master forthwith proceed with the hearings directed in said order to be held, report to the Court after the conclusion of such hearings, embody his said findings, conclusions and recommendations in a report to be filed with the Court and give notice of such filing to the parties to said proceeding, and that exceptions by any party to any such finding or recommendation be thereafter filed with the Court; and (c) that the City of Detroit, Michigan, the City of Toledo, Ohio, and Mokan be permitted by the Special Master to appear at the hearings before him, as *amici curiae* but not as intervenors.

The Company is further informed as follows: During the hearings before said Special Master, Columbia Oil and Columbia Gas amended said plan in two respects, viz. (1) by striking therefrom the above-mentioned provision as to the directors of Columbia Oil, and inserting in lieu thereof provisions that the representatives of Columbia Oil on the board of directors of the Company shall be directors of Columbia Oil, that as early as practicable after the entry of the final order approving said plan, the directors of the Company, who now represent Columbia Oil, shall resign and be succeeded by persons who shall have been elected as directors of Columbia Oil under said plan, that Columbia Oil will, subject to the necessary authorization by its stockholders, amend its articles of incorporation or take such other appropriate action as may be required by law to divide its board of directors into three classes, the term of office of the first class to expire at the annual meeting next ensuing after such classification, the term of office of the second class one year thereafter, and the term of office of the third class two years thereafter, that of the directors initially to be chosen under said plan, the maximum number permissible by law shall be elected for the longest term, and that for a period of five years from the date of entry of the order approving said plan no person shall be qualified to be elected and serve as a director of Columbia Oil who shall be objectionable to the Department of Justice; and (2) by providing that the carrying out of said plan shall be contingent upon the approval to the extent required by law of the Securities and Exchange Commission, and necessary and appropriate corporate action by the stockholders of Columbia Oil. During said hearings it was stated, in effect, that Columbia Oil and the Department of Justice had agreed upon the following persons as the new directors of Columbia Oil if said plan becomes effective: Raymond Wesley Starr, of Grand Rapids, Michigan; George James Burke, of Ann Arbor, Michigan; Richard C. Patterson, Jr., of New York City; David H. Goodwillie, of Toledo, Ohio; Frank J. Lewis, of Chicago, Illinois; J. Donald Duncan, of New York City; and James Bruce, of Baltimore, Maryland, and New York City; the last two persons named having been so chosen to represent the stockholders of Columbia Oil who are not also stockholders of Columbia Gas; and that if said plan becomes effective, the number of directors of the Company to which Columbia Oil shall

be entitled shall be elected by Columbia Oil as directors of the Company (which directors would under present conditions serve as such directors in the place and stead of Joe D. Creveling, Gano Dunn, Henry H. Heimann, Walter G. Mortland and Raymond A. Ransom, said Richard C. Patterson, Jr. having since been elected a director). During such hearings it was also stated that the Department of Justice reserved the right to object to the approval of said plan by the Court unless certain large stockholders of Columbia Oil dispose of their stockholdings in said corporation. The hearings commenced before the Special Master on July 14, 1939, and concluded with the filing of briefs on July 25, 1939, and the Special Master filed his report on or about July 29, 1939, recommending that the Court approve said plan, as amended at the hearings, and grant the motion of Columbia Gas and Columbia Oil for the modification of the decree in accordance with the terms of said plan upon the approval of the Securities and Exchange Commission, to the extent required by law, and upon the taking of appropriate corporate action by the stockholders of Columbia Oil, as contemplated by said plan. On or about April 23, 1940, the District Court heard argument on the motion of Columbia Gas and Columbia Oil for confirmation of the report and on the objections and exceptions to the report which had been filed. At the hearing the Department of Justice continued to urge its objection that Mr. Gossler and certain officers and directors of Columbia Gas should dispose of their stockholdings in Columbia Oil, but took the position that the Court might defer action on its objections that other large stockholders of Columbia Oil should also dispose of their stockholdings in said corporation until the hearing before the Court upon an application for a final order for the effectuation and consummation of said plan. On January 18, 1941, the Court rendered an opinion approving the plan, as amended at the hearings before the Special Master and the modifications of the consent decree contemplated by the aforementioned motion, upon the condition that Mr. Gossler and certain officers and directors of Columbia Gas dispose of their stockholdings in Columbia Oil. The opinion recited, among other things, that The United Corporation had agreed to be made a party to the proceeding and for the decree therein to prohibit it from voting its stock of Columbia Oil without the prior approval of the Court except for the purpose of a quorum and for the proposed plan.

The Company is further informed as follows: On or about July 18, 1939, one David Young, III, as plaintiff, commenced an action in the United States District Court, for the District of Delaware, against Columbia Gas and Columbia Oil, as defendants. In his complaint in said action he alleged, among other things, that he is the owner of 100 shares of the common stock of Columbia Gas, that if said plan be effectuated, it will constitute a reckless and illegal disposition and waste of the assets of Columbia Gas, that he and all other stockholders of Columbia Gas, who are not also stockholders of Columbia Oil, will be irreparably damaged, and that on July 6, 1939, he commenced a similar suit in the Chancery Court of the State of Delaware to enjoin the carrying out of said plan and that the Chancellor of the State of Delaware refused a temporary restraining order in said suit on the ground that said suit should have been more properly brought in the United States District Court for the District of Delaware. In said complaint said plaintiff prays that Columbia Gas and Columbia Oil be enjoined, during the pendency of said action and permanently thereafter, from putting said plan into effect or attempting to carry out the same. In said action the Court denied said application for an injunction during the pendency of said action, and, in effect, ruled that said plan should not become effective prior to the trial of said action. On or about September 19, 1939, the Court referred this action to William Prickett, Esquire, Special Master, hearings were commenced before the Special Master on November 15, 1939, and were concluded December 22, 1939, and on August 10, 1940, after issuing his draft report recommending dismissal of this suit and after hearing argument on objections and exceptions which had been filed thereto, the Special Master filed his report recommending dismissal of the suit. On November 8, 1940, the District Court heard the exceptions and objections which had been filed to the report of the Special Master. On February 20, 1941 the District Court handed down its opinion approving the Special Master's report and holding that the stockholder's bill should be dismissed. An order dismissing the stockholder's bill was entered on March 3, 1941. On June 2, 1941, the stockholder filed in the District Court a notice of appeal from said order and on July 19, 1941 filed his Designation of Contents of Record on Appeal. No counter designations were filed by the appellees and the appellant filed the Record on Appeal on September 2, 1941 in the United States Circuit Court of Appeals for the Third Circuit. The Circuit Court of Appeals has extended the time within which the appellant may file his brief to and including December 31, 1941.

The Company is further informed that there is now pending in the United States District Court, for the Southern District of New York, an action brought by one Emma G. Moses, as plaintiff, against Columbia Gas and Columbia Oil, as defendants, in which substantially the same allegations are made and substantially the same relief is sought as the above-mentioned allegations and relief in said action brought by David Young, III. The Company is further informed that on or about January 2, 1940, upon motion of the defendants in said action, the District Court entered an order staying all further proceedings therein until twenty days after the final determination of the above-mentioned action brought by David Young, III, and extending the time of the defendants to move or answer for a further period of twenty days after the expiration of said stay.

The Company makes no representation as to whether said proposed plan will become effective and be consummated.

The Company is further informed that in May, 1939, the Attorney General of the United States requested permission to intervene in the proceeding before the Securities and Exchange Commission for the approval of the Integration Plan filed by Columbia Gas (Docket No. 54-12), the Attorney General alleging that his purpose in intervening was that he intended to apply to said Commission for orders (1) refusing to defer consideration of the status of the Company and Michigan Gas Transmission Corporation, and (2) disapproving any plan submitted or which may be submitted by Columbia Gas in such proceeding unless such plan provides for divesting Columbia Gas of all interest in and control over the Company and Michigan Gas Transmission Corporation. By order dated January 10, 1941 the Commission disapproved said Integration Plan.

The Company is further informed that on or about February 6, 1939, Mokan filed, on its own behalf and in a representative capacity as a stockholder of the Company, a motion for leave to intervene in the above-mentioned anti-trust suit, the motion papers praying, in effect, (1) that the defendants be adjudged guilty of contempt for failure to comply with and for having violated the provisions of the above-mentioned Decree of January 29, 1936; (2) that such Decree be interpreted, enlarged and enforced as follows: (a) that it be decreed that Columbia Gas holds as Trustee for the Company its pipe line from Dana to Zionsville, Indiana, and from Zionsville to Detroit, Michigan, and that Columbia Gas be directed forthwith to transfer said line to the Company, (b) that Columbia Gas be directed forthwith to cause Michigan Gas Transmission Corporation to transfer to the Company all contracts for the supply of gas entered into with any municipalities, persons, firms or corporations in Indiana, Michigan and Ohio since the entry of such Decree, (c) that Columbia Oil be ordered forthwith to surrender to the Company at cost for cancellation its Class B preferred stock of the Company and 80,000 shares of the common stock of the Company, (d) that Columbia Oil be ordered forthwith to sell its remaining stock of the Company to a purchaser or purchasers and upon terms to be approved by the Court, and (e) that the exceptions in Section II of such Decree quoted in the answer to Item 4(b) of this Registration Statement, be stricken out; and (3) that Gano Dunn be removed as Trustee, and that a new trustee be appointed pending divestiture by Columbia Oil of its securities of the Company. The Company is also informed that defendants in such suit opposed such motion, that after a hearing on such motion before the Court, the Court, by order dated March 30, 1939, denied such motion for leave to intervene, and that Mokan took an appeal from such order, which was subsequently consolidated with its appeal from the order denying its further motion for leave to intervene referred to in the next succeeding paragraph hereof, to the United States Circuit Court of Appeals, which consolidated appeals, as explained in the next succeeding paragraph, were dismissed by the United States Circuit Court of Appeals on or about December 15, 1939.

The Company is further informed that in the above-mentioned anti-trust suit, on July 10, 1939 Mokan presented a further motion for leave to intervene in said suit and a petition for an order directing that the above-mentioned motion filed therein by Columbia Oil and Columbia Gas on or about June 20, 1939, and the proposed plan (above mentioned) annexed thereto, be denied and disapproved, and that the Court supplement its said Decree of January 29, 1936, by such further order as to it may seem proper for the accomplishment of the declared purposes of said Decree by the divestiture of all ownership of Columbia Gas and Columbia Oil of securities of the Company. The Company is further informed that on July 10, 1939, the Court denied such motion and petition, that Mokan took an appeal therefrom, which was consolidated with

its appeal from the order of March 30, 1939, mentioned in the next preceding paragraph hereof, to the United States Circuit Court of Appeals, and that on July 20, 1939, the latter Court denied an application of Mokan for an order staying all proceedings with respect to the motion mentioned in the preceding paragraph pending the decision of that Court on said consolidated appeal by Mokan. The Company is further informed that on or about December 15, 1939, the United States Circuit Court of Appeals dismissed said consolidated appeals on the ground that it lacked jurisdiction thereof, that thereafter Mokan applied to the Supreme Court of the United States for a writ of certiorari to review the decision of the United States Circuit Court of Appeals of December 15, 1939, dismissing the consolidated appeals of Mokan, and that said application was denied by the Supreme Court of the United States on or about April 22, 1940.

A communication, dated January 15, 1940, from Mokan to the Company, its President, its Secretary and Controller, its Treasurer and each of its directors, was received by such addressees on or about that date. In such communication it was alleged, in effect, that despite the above-mentioned decree of January 29, 1936, the Company was not released from illegal control and the monopolization and restraint mentioned in said anti-trust suit were not ended, that Columbia Oil and Columbia Gas were restraining interstate commerce in the transmission and sale of natural gas through their control of Michigan Gas Transmission Corporation and that such restraint had injured and was injuring the Company, and that the fact of the continuation of the illegal acts was brought to the attention of the Board of Directors of the Company but that no action has been taken in this connection by the Company. In such communication Mokan, as a minority stockholder, demanded that the Company employ independent counsel and take the following action: (1) bring an action or actions for damages and for an accounting of the profits which Michigan Gas Transmission Corporation has made resulting from the contract of March 17, 1936 (mentioned in the answer to Item 41, to which reference is hereby made) which was imposed upon the Company by the Columbia companies, in which action Columbia Gas should be joined and required to account for all dividends and other moneys received by it from Michigan Gas Transmission Corporation which are traceable to such profits; (2) institute proceedings under the anti-trust laws against the Columbia companies, Michigan Gas Transmission Corporation and all corporations and individuals who have acted in concert with them to restrain interstate commerce in the transmission and sale of natural gas in Indiana, Ohio and Michigan, and to recover three-fold the damages suffered by the Company by virtue of said restraint; (3) institute an action against the parties mentioned in (2) above to enjoin them from continuing to violate the anti-trust laws, in which action the relief prayed for should include a prayer that Mr. Gano Dunn and the Columbia companies be restrained from exercising any voting control of the Company; (4) intervene in the above-mentioned anti-trust suit and request that the Columbia companies be held in contempt by virtue of their violations of paragraph IV of the above-mentioned consent decree and pray that the Columbia companies be required to sell to the Company all of the stock of Michigan Gas Transmission Corporation; (5) institute an action against Michigan Gas Transmission Corporation and the Columbia companies for the purpose of having the above-mentioned contract of March 17, 1936, cancelled on the ground that the Company was forced into such contract by virtue of the dominion and control exercised over it at the time by the Columbia companies; and (6) take any and all other steps and proceedings which may be deemed necessary, appropriate and advisable in the interest of the parties in the premises. Such communication also stated that Mokan offered, in the event independent counsel agreeable to it be selected to take the action demanded above, to hold the addressees harmless from any ultimate net loss through fees, costs and expenses incurred. It further stated that if the addressees fail to take all of the action outlined above on or before February 15, 1940, Mokan would take such action against said corporations and individuals as it is advised by counsel it may take as a stockholder of the Company or in its primary right. Following receipt of said communication of January 15, 1940, the Company appointed a committee to recommend to its Board of Directors the name of an independent counsel who would advise the Company as to what action, if any, should be taken with respect to said demands contained in such communication. That committee could not agree and did not make any recommendation to the Board of Directors of the Company with regard to any such independent counsel, and such Board has not taken any further action in connection with the aforesaid demands.

The Company is further informed as follows: In the above-mentioned anti-trust suit, on or about March 23, 1940, an application, allegedly in the name of the Company, was filed for leave to become a party to such suit for the limited purpose of enforcing

the rights conferred by Section IV of the above mentioned consent decree. Columbia Gas and Columbia Oil filed with the Court motions to dismiss such alleged application upon the grounds, among other things, that such application was not signed or verified by the Company and the attorneys whose names appear on the application as attorneys for the Company were not attorneys for it and were not authorized by the Company to act on its behalf. When such alleged application came on to be heard before the Court, counsel for Columbia Gas and Columbia Oil appeared in opposition, and Edward N. Goodwin, General Counsel of the Company, appeared and stated, among other things, to the Court that such application had not been authorized by the Company. By order dated April 23, 1940, the Court denied such application, and thereafter on or about June 14, 1940, the District Court allowed an alleged appeal by the Company from said order to the Supreme Court of the United States. On or about October 14, 1940, the Supreme Court of the United States decided to postpone further consideration of the question of the jurisdiction of that Court of said appeal until the hearing of the appeal on the merits. The Company also took an alleged appeal from said order of April 23, 1940, to the United States Circuit Court of Appeals, which appeal is now pending. A stipulation was entered into between the parties and filed in the last mentioned appeal in the Circuit Court of Appeals on October 19, 1940, providing that said appeal would be withdrawn and discontinued in the event the United States Supreme Court should accept jurisdiction of the appeal allowed by the District Court on June 14, 1940, and that if the United States Supreme Court should refuse to entertain jurisdiction of the appeal allowed to it, the time for appellant to file the Record on Appeal in the Circuit Court of Appeals would be extended to the tenth day following the Supreme Court's refusal to entertain jurisdiction. On March 3, 1941, after oral argument before it, the United States Supreme Court handed down its opinion affirming the order of the District Court, and thereafter, on a motion made by the appellant in the appeal pending in the Circuit Court of Appeals, said appeal was dismissed without prejudice.

The Company is further informed as follows: In the above-mentioned anti-trust suit, on or about April 15, 1940, Mokan on its behalf as a stockholder and on behalf of all other stockholders of the Company similarly situated, filed an application in behalf of and in the name of the Company, for leave to become a party to such suit for the limited purpose of enforcing the rights conferred by Section IV of said decree; and asking that a trustee be appointed to hold all the stock of Michigan Gas Transmission Corporation, that the above-mentioned Gano Dunn as Trustee be directed to deliver and surrender to the Company 80,000 shares of its capital stock, and that such trustee be directed to vote the common stock and the Class A and Class B preferred stock of the Company so that the provisions of such preferred stock may be amended to eliminate therefrom any voting rights. Columbia Gas and Columbia Oil opposed such application at a hearing thereon before the Court. By order dated April 23, 1940, the Court denied such application, and thereafter on or about June 14, 1940, the District Court allowed an appeal by Mokan from said order to the Supreme Court of the United States. On or about October 14, 1940, the Supreme Court of the United States decided to postpone further consideration of the question of the jurisdiction of that Court of said appeal until the hearing of the appeal on the merits. Mokan also appealed from said order of April 23, 1940, to the United States Circuit Court of Appeals, which appeal is now pending. A stipulation was entered into between the parties and filed in the last-mentioned appeal in the Circuit Court of Appeals on October 19, 1940, providing that said appeal would be withdrawn and discontinued in the event the United States Supreme Court should accept jurisdiction of the appeal allowed by the District Court on June 14, 1940, and that if the United States Supreme Court should refuse to entertain jurisdiction of the appeal allowed to it, the time for appellant to file the Record on Appeal in the Circuit Court of Appeals would be extended to the tenth day following the Supreme Court's refusal to entertain jurisdiction. On March 3, 1941, after oral argument before it, the United States Supreme Court handed down its opinion reversing the order of the District Court and granting Mokan's application to the extent of permitting it to intervene in the Government's anti-trust suit for the limited purpose of enforcing, on behalf of the Company, the rights conferred by Section IV of the Consent Decree entered in said suit on January 29, 1936. A petition for rehearing made by Columbia Gas and Columbia Oil was denied by the Supreme Court by order dated March 17, 1941, which amended the language of the Supreme Court's opinion of March 3, 1941 but did not change the ultimate result of its decision. On April 21, 1941, the District Court issued its order on the mandate from the Supreme Court (a) making Mokan a party to the anti-trust suit for the limited purpose aforementioned, (b) directing the defendants in said suit to answer the application of Mokan, and (c) making the Company a party to said suit

and granting it leave to file its answer to the application. Thereupon, the defendants in said suit filed their answers denying the material allegations of Mokan's application, and the Company filed its answer thereto neither admitting nor denying any of the allegations thereof. On or about May 5, 1941, A. Faison Dixon, Vice-President of Mokan, filed an affidavit of personal bias or prejudice on the part of Hon. John P. Nields, United States District Judge for the District of Delaware, against Mokan, and on May 6, 1941 said Hon. John P. Nields, District Judge, entered an order directing that an authenticated copy of the said affidavit of A. Faison Dixon should forthwith be certified to the Senior Circuit Judge of the United States Circuit Court of Appeals for the Third Circuit, to the end that such proceedings might be had thereon as are provided by law. No trial of said suit has as yet been had. On a motion made by the attorneys for Mokan in its appeal aforementioned pending in the United States Circuit Court of Appeals for the Third Circuit, said appeal was dismissed without prejudice.

On or about March 11, 1940, Mokan and Lucille I. Dammann instituted an action against Columbia Gas, Columbia Oil, Michigan Gas Transmission Corporation, the Company and Gano Dunn, in the United States District Court for the District of Delaware, praying, among other things, that the Court decree that the defendants (other than the Company) have been and are now engaged in a combination and conspiracy in restraint of trade in natural gas in violation of the anti-trust laws, that such defendants be perpetually enjoined from further engaging in such combination and conspiracy, that such defendants and the officers, directors and stockholders thereof be enjoined from holding and voting any part of the stock of the Company and Michigan Gas Transmission Corporation, that persons serving as directors of the Company who were named or elected by Columbia Oil or by Gano Dunn be enjoined from further serving in such offices, and that such defendants be enjoined from naming or electing any persons to serve as such directors. The Company filed an answer to the complaint in such action, and is informed that Columbia Gas, Columbia Oil, Michigan Gas Transmission and Gano Dunn filed motions to dismiss such complaint and for summary judgment. On or about August 27, 1940, A. Faison Dixon, Vice-President of Mokan, filed an affidavit of personal bias or prejudice on the part of Hon. John P. Nields, United States District Judge for the District of Delaware, against Mokan, one of the plaintiffs in said action; and thereafter Hon. Owen J. Roberts, Circuit Justice of the United States Circuit Court of Appeals, entered an order designating and appointing Hon. William H. Kirkpatrick, a United States District Judge, to hold the District Court of the United States in connection with said action. The aforementioned motions to dismiss the complaint and for summary judgment were argued before Judge Kirkpatrick on December 6 and 7, 1940 and no decision has as yet been rendered thereon.

On or about May 29, 1940, Mokan, as complainant, instituted an action against Columbia Oil, the Company and Gano Dunn, as respondents, in the Court of Chancery of the State of Delaware, New Castle County, praying, among other things, (a) that an injunction be granted restraining Columbia Oil from selling, assigning or otherwise disposing of its beneficial interest in 100,000 shares of Class A preferred stock of the Company; (b) that Columbia Oil and Gano Dunn be restrained from voting all the shares of stock of the Company owned or held by them on any proposal to amend the Company's certificate of incorporation so as to authorize the issuance and sale of a new preferred stock having a lesser dividend rate and without any further participation in dividend distribution, and from otherwise obstructing the refinancing of said Class A preferred stock now held by Gano Dunn and beneficially owned by Columbia Oil; (c) that Columbia Oil and Gano Dunn be restrained from demanding or receiving any dividends on said Class A preferred stock in excess of $4.50 per share per annum, without further participation; and (d) that the Company be enjoined from paying to Columbia Oil or Gano Dunn any sum by way of dividends on said Class A preferred stock in excess of $4.50 per share per annum. Thereafter the respondents in such action caused said action to be removed to the Federal Court of the United States for the District of Delaware where said action is now pending. Thereafter each of the defendants filed in said Federal Court their respective motions to dismiss the complaint in such action and for summary judgment, and such motions of Columbia Oil and Gano Dunn are now pending. The Company was allowed by said Federal Court leave to withdraw its motion to dismiss such complaint and to file its answer in place of such motion, in view of a stipulation which has been entered into on behalf of Mokan and the Company with respect to certain portions of the relief demanded in the complaint in such action. The Company accordingly withdrew said motion and filed its answer and supplemental answer. In June, 1940, the Company and Columbia Oil entered into an agreement, and the Company and Mokan entered into another agreement, whereby,

in effect, Columbia Oil agreed to repay to the Company such portion of the dividends that may be paid for the year 1940, or any calendar year thereafter, in excess of $4.50 per share per annum on the Company's Class A preferred stock, to the extent held improper by decision of the court having jurisdiction of said action, and Mokan agreed that it would not apply for any restraining order in said action and that pending the final determination of said action the Company may continue to pay dividends at the rate of $6.00 per share per annum on said Class A preferred stock and also participating dividends on said stock. On or about August 27, 1940, A. Faison Dixon, Vice-President of Mokan, filed an affidavit of personal bias or prejudice on the part of Hon. John P. Nields, United States District Judge for the District of Delaware, against Mokan, the plaintiff in said action; and thereafter Hon. Owen J. Roberts, Circuit Justice of the United States Circuit Court of Appeals, entered an order designating and appointing Hon. William H. Kirkpatrick, a United States District Judge, to hold the District Court of the United States in connection with said action. On December 3, 1940, Mokan made a motion to remand this action to the Delaware Chancery Court. This motion was argued before Judge Kirkpatrick on December 7, 1940, and arguments on the aforementioned motions of Columbia Oil and of Gano Dunn to dismiss the complaint and for summary judgment, which had been scheduled for hearing on December 5 and 6, 1940, were deferred pending the Court's decision on the motion to remand. On April 16, 1941, Judge Kirkpatrick granted Mokan's motion to remand the case to the Delaware Chancery Court, and thereupon Columbia Oil filed in that court its answer to the complaint denying the material allegations thereof. Mokan has filed a motion in such action for leave to amend its bill of complaint whereby it seeks a decree enjoining the Company from paying to Columbia Oil or in the event the Company pays prior to final decree then a decree directing Columbia Oil to repay to the Company, a dividend in the sum of $134,561.17 declared on December 19, 1941 as a participating dividend on the Class A Preferred Stock owned beneficially by Columbia Oil. This action has been set for trial on February 25, 1942. Gano Dunn has not been served with a writ of subpoena in said action and has not appeared or filed any answer to the complaint therein.

On or about October 24, 1939, Mokan and Lucille I. Dammann, on their own behalf as stockholders and on behalf of all of the stockholders of the Company similarly situated, instituted a suit in the Chancery Court of Delaware, New Castle County, against the Company, Columbia Oil and Columbia Gas as respondents. The complaint alleged that Columbia Gas and Columbia Oil wholly controlled the Company on January 31, 1936, and caused the Company to execute and deliver the agreement dated January 31, 1936, between said two corporations and the Company. The complaint further alleged, in effect, as follows: That of the 80,000 shares of common stock of the Company offered in 1939 for subscription to the stockholders of Mokan or their assignees pursuant to said agreement, certain of said shares would not be so subscribed for, that the complainants believe that Columbia Oil claims the right and intends to purchase from the Company any shares not so subscribed for, that the Company, remaining under the control of Columbia Oil, claims that it is obligated under said agreement to sell such shares to Columbia Oil, that the subscription price of said shares is $25 per share and the market value of the Company's common stock is $42.50 per share, that the true value of said shares at all times since January 31, 1936, has been far in excess of the price at which the Company was forced to agree and now proposes to sell such shares to Columbia Oil, that but for the fact that Columbia Oil and Columbia Gas exercised dominion and control over the Company on January 31, 1936 said agreement would not have been entered into by the Company, and that said agreement was made in violation of law, in evasion of the above-mentioned consent decree and was made by Columbia Oil for its own enrichment and was and is fraudulent and unfair to the Company, and if carried out as threatened, will cause irreparable injury to the complainants and the other stockholders of the Company except Columbia Oil. The complaint prayed that the Company be enjoined from selling to Columbia Oil any of the shares of the common stock of the Company remaining unsubscribed for as aforesaid, and that Columbia Oil be enjoined from purchasing such shares from the Company. The Company and each of the other two respondents filed separate answers in said suit, the answer of the Company, among other things, denying that it was controlled by Columbia Gas and Columbia Oil and that said two corporations caused said agreement to be executed by the Company, and admitting that 1,285 shares, out of the aforesaid 80,000 shares of the common stock of the Company, were not subscribed for by the stockholders of Mokan or their assignees, and alleging that the Company is obligated to sell said 1,285 shares to Columbia Oil at

$25 per share upon compliance by Columbia Oil with the provisions of the above-mentioned agreement, and denying the allegation in the complaint that such agreement was made in violation of law, in evasion of said consent decree, and was made by Columbia Oil for its own enrichment and was fraudulent and unfair to the Company and if carried out will cause irreparable injury to the stockholders of the Company. Thereafter a stipulation was entered into by the attorneys for all parties in said suit, whereby, in effect, Columbia Oil will not purchase from the Company and the Company will not sell to Columbia Oil any of the 1,285 shares until such time as said stipulation be terminated, and that said stipulation may be terminated by any party in said suit upon five days' notice of such termination to the other parties. No such notice has been given by any of said parties.

The Company is further informed as follows:

After the approval of the District Court for the District of Delaware of the Plan which had been jointly filed by Columbia Gas and Columbia Oil in said Court, Columbia Gas, on February 26, 1941, filed an application (File No. 70-263) with the Securities and Exchange Commission, in which it requested the Commission's approval of (a) its proposed acquisition of all the stock and obligations of the five oil and gasoline subsidiary companies of Columbia Oil, in consideration of the surrender by it to Columbia Oil of 400,000 shares of the participating Preferred stock of Columbia Oil, (b) the execution of a proposed agreement by Columbia Gas to save Columbia Oil harmless from any liability which may arise from a suit pending in the Court of Common Pleas of Franklin County, Ohio, instituted by John L. Davies in 1937 against Columbia Gas and others, (c) the surrender by Columbia Gas of such an amount of debentures of Columbia Oil as Columbia Oil would be able to acquire at par and accrued interest from monies raised by a contemplated disposition by Columbia Oil of its holdings of Class A Preferred stock of the Company and the proposed reduction of the interest rate on the remaining debentures of Columbia Oil from 6 per cent to 3 per cent, and (d) the proposed sale of Columbia Gas' interest in Indiana Gas Distribution Corporation and Michigan Gas Transmission Corporation to the Company, together with the proposed sale by The Ohio Fuel Gas Company of a gas pipe line in Indiana to the Company. After the handing down of the Commission's order of May 27, 1941, denying in part and granting in part the consolidated applications under Section 2(a) (8) of the Public Utility Holding Company Act of 1935, a hearing was held on June 3, 1941 before a Trial Examiner of the Commission on Columbia Gas' application (File No. 70-263), at which Columbia Gas introduced some evidence in support of its application, but the hearing was adjourned so as to permit Columbia Oil and the Company to file applications with respect to the transactions involved, in view of the order of the Commission of May 27, 1941.

On or about June 7, 1941, an agreement was entered into between Columbia Gas, Columbia Oil and Mokan, dated said day, which provided that (a) Columbia Oil and Mokan would distribute their entire respective holdings of the Company's common stock in such a way as would best serve the respective interests of said companies, through the issuance of warrants to its stockholders or by underwriting of the stock by bankers or otherwise; (b) Columbia Oil would consent to the refunding and retirement by the Company of Columbia Oil's holdings of the Class A and Class B Preferred stocks of the Company in such a manner as the Company might determine to be in its best interest, the retirement of the Class A Preferred stock to be at par and accrued dividends and the retirement of Class B Preferred stock to be at $125 per share and accrued dividends; (c) Columbia Gas would sell to the Company the stock and indebtedness of Indiana Gas Distribution Corporation and Michigan Gas Transmission Corporation for an amount equal to the actual investment of Columbia Gas therein; (d) the Company would purchase at the same time from The Ohio Fuel Gas Company, its gas pipe line in Indiana for a price of $355,191; (e) a new board of twelve directors of the Company would be elected, one member to be a nominee of Mokan, another to be a nominee of Columbia Oil, and the remaining members to be entirely independent persons whose election should be mutually satisfactory to both Mokan and Columbia Oil, all directors to be elected annually for one year, and the first Chairman of the Board of Directors to be designated by the Board of Directors of Mokan; (f) the entire Plan would be submitted in toto to the Securities and Exchange Commission for its approval, and Columbia Gas and Columbia Oil would submit it to the Department of Justice, would file with the District Court in Delaware such supplemental and amended motions to the joint motion and Plan which had been approved by said District Court on January 18, 1941 as should be necessary to obtain approval by said Court of the modification of the Consent Decree as provided in said

motion and as further modified to effect the settlement agreed upon in the instant agreement, and would expeditiously file with the Securities and Exchange Commission such applications and declarations as might be necessary under the Holding Company Act to authorize Columbia Gas and Columbia Oil to take the steps required of them in said agreement; (g) Mokan would withdraw all pending litigation against Columbia Gas or Columbia Oil or against any of its officers or directors, or against Gano Dunn, Trustee, and exchange general releases with Columbia Gas and Columbia Oil, including the officers and directors, and pending such withdrawal Mokan would institute no further litigation and would allow the present litigation to remain in statu quo; and (h) it was provided in said agreement that it would terminate and any obligations of the parties cease if all the transactions therein provided for should not be effected by October 1, 1941, but this date should be extended to December 1, 1941 upon the request of any one of the parties. The Company makes no representation whether said agreement is or is not now in effect.

On July 30, 1941, and pursuant to the three-party agreement above referred to, Columbia Gas and Columbia Oil filed in the District Court of Delaware a supplemental joint motion embodying the necessary supplemental provisions to the Plan which had been approved by the Court on January 18, 1941, to incorporate therein the transactions agreed to be carried out in said three-party agreement, and on or about August 1, 1941 Columbia Gas and The Ohio Fuel Gas Company filed with the Securities and Exchange Commission a joint amendment to the application (File No. 70-263) and Columbia Oil filed an application (File No. 70-371), in which said companies requested the Commission to approve the various transactions respectively contemplated to be carried out by them in the Plan which had been approved by the District Court on January 18, 1941, as supplemented by the supplemental provisions thereto aforesaid. On August 20, 1941, the Company filed an application and declaration with the Commission (File No. 70-387) requesting the Commission to approve (a) the proposed sale by Columbia Gas to the Company of the stock and indebtedness of Michigan Gas Transmission Corporation and of Indiana Gas Distribution Corporation, for a price equal to the actual investment of Columbia Gas therein, subject to the privilege to the Company of supplying a person or corporation who would purchase the stock and debt of Indiana Gas Distribution Corporation from Columbia Gas for an amount equal to the investment of the latter corporation therein; (b) the proposed sale by The Ohio Fuel Gas Company to the Company of certain gas pipe lines in Indiana and Ohio belonging to the former corporation for a price equal to the present fair value thereof; (c) the retirement or redemption of all of the Company's $10,000,000 par value of its Class A Preferred stock at par and accrued and unpaid dividends and all of its $1,000,000 par value of its Class B Preferred stock at $125 per share and accrued and unpaid dividends; and (d) the issuance and sale by the Company of certain new securities, the proceeds of which would be used to pay the cost of acquiring the stock, indebtedness and pipe lines above mentioned, and to retire or redeem its Class A or Class B Preferred stocks, and for other corporate purposes.

On August 25, 1941, the Securities and Exchange Commission entered a notice of and order instituting proceedings against Columbia Gas, Columbia Oil, the Company, Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation under Section 11(b)(1), 11(b)(2), 12(c), 12(f) and 15(f) of the Public Utility Holding Company Act of 1935. In said order the Commission incorporated fifty-three paragraphs of allegations which it directed the respondents to answer on or before September 8, 1941, consolidated the proceedings "In the Matter of Columbia Oil & Gasoline Corporation" bearing File No. 70-263, for hearing with the proceedings instituted by said order, and fixed September 16, 1941 as the date of said consolidated hearings. In said order the respondents were directed to show cause, among other things, why the Commission should not enter an appropriate order or orders pursuant to Sections 11(b)(1), 11(b)(2), 12(c), 12(f) and 15(f) of the Act. On or about September 8, 1941 the respondents Columbia Gas and Columbia Oil filed their answers with the Commission, denying the material allegations contained in its notice and order and the Company filed its answer. Said hearings were subsequently adjourned to October 14, 1941, on which day an argument was had before the Commission on an application of the Commission's counsel that evidence bearing upon the issues raised under Section 11(b)(1) of the Act should first be introduced, and that thereafter evidence relating to the remaining issues should be introduced. On the 15th day of October, 1941, the Commission handed down its order granting the intervention applications of Mokan, William H. Danforth, a common stockholder of Columbia Oil, and Abner Goldman, a common stockholder of Columbia Gas, to the limited extent of permitting them to participate in the proceeding to the extent

of adducing evidence, cross-examining witnesses, filing briefs and presenting oral argument, without conferring upon them the status of parties to the proceeding, and directing that upon the resumption of hearings in the proceedings evidence bearing upon the issues raised under Section 11(b)(1) of the Act should first be introduced and that thereafter evidence relating to the remaining issues of the proceedings should be introduced in accordance with the further direction of the Commission, and further directing that the hearings be adjourned to October 28, 1941. The hearings before the Trial Examiner were resumed on October 28, 1941 and continued through October 30, at which time, after conferences between the staff of the Commission and counsel for Columbia Gas, Columbia Oil and the Company, the staff recommended to the Examiner that the hearings be adjourned until November 18, 1941, with the understanding that Columbia Gas, The Ohio Fuel Gas Company, Columbia Oil and the Company should file with the Commission, on or before November 10, 1941, new applications or declarations requesting the Commission's approval of (a) a proposed sale by Columbia Gas to the Company of the stock and indebtedness of Indiana Gas Distribution Corporation and Michigan Gas Transmission Corporation for a price equal to the actual investment of Columbia Gas therein; (b) the proposed sale by The Ohio Fuel Gas Company to the Company of certain gas pipe lines located in the States of Ohio and Indiana; (c) the proposed surrender by Columbia Oil to the Company, for retirement or redemption, of $10,000,000 par value Class A Preferred stock of the Company at par and accrued and unpaid dividends; (d) the proposed acquisition by Columbia Oil from Columbia Gas of as many debentures of Columbia Oil at par and accrued interest as could be acquired with the proceeds realized by Columbia Oil from the surrender by Columbia Oil to the Company of the Class A Preferred stock of the Company; and (e) the proposed issue and sale of certain new securities by the Company, the proceeds of which would be used to pay the cost of acquiring the stock and indebtedness and pipe lines above mentioned and to retire and/or redeem its Class A Preferred stock. Counsel for Mokan and also the City of Detroit, an intervenor, by its Corporation Counsel, objected to this recommended procedure on the grounds that it would delay the Commission's proceedings under Section 11(b)(1) of the Act. After some discussion, the Corporation Counsel for the City of Detroit withdrew his objections. Pursuant to this recommended procedure, Columbia Gas and Columbia Oil filed, on November 7, 1941, their applications requesting the Commission's approval of the actions such companies respectively proposed to take in carrying out the transactions last above mentioned. On November 7, 1941 argument was made before the Commission on Mokan's objections to the procedure recommended by the Commission's counsel, as aforesaid. The Corporation Counsel of the City of Detroit reasserted his objections at that time. Such objections were subsequently overruled by the Commission. Thereafter hearings were held before the Trial Examiner of the Commission with respect, among other things, to the matters mentioned in clauses (a), (b), (c) and (e) above and subsequently, by order of the Commission, such applications and declarations regarding such matters were approved or permitted to become effective. On January 15, 1942, the Commission issued an order directing procedure and reconvening hearing in said proceedings on January 29, 1942, for the purpose of receiving evidence with respect to the issues involving the retainability by Columbia Gas and Columbia Oil of their interest, direct or indirect, in the Company under Section 11(b)(1); and with respect to the issues involving the distribution of voting rights in the Company with reference to the Class B Preferred Stock under Section 11(b)(2).

PROPERTY

7. State briefly the general character and location of the principal plants and other important units of the registrant and its subsidiaries. If any principal plant or important unit is not held in fee, so state and describe how held.

Production Property and Gas Reserves

The Company, as of September 30, 1941, owned or controlled oil and gas lease holds on approximately 271,000 acres in the Amarillo and Hugoton gas fields located in the Panhandle of Texas, Southwestern Kansas and Texas County, Oklahoma, and in addition controlled through gas purchase contracts the gas production from approximately 67,000 acres in this territory. The Company is currently producing gas from certain of these leaseholds by means of 57 gas wells in the Amarillo gas field and 80 gas wells (including 46 gas wells in which the Company has only a 50% interest) in the Hugoton gas field.

EXHIBIT 145.

AUDITORS' CERTIFICATE

5083

We have examined the balance sheet of Panhandle Eastern Pipe Line Company (a Delaware corporation, hereinafter referred to as the Company) as of September 30, 1941, the consolidated balance sheet of the Company and its subsidiary as at that date and the statements of income and surplus of the Company and its subsidiaries for the three years and nine months ended that date, have reviewed the system of internal control and the accounting procedures of the companies and, without making a detailed audit of the transactions, have examined or tested accounting records of the companies and other supporting evidence, by methods and to the extent we deemed appropriate. Our examination was made in accordance with generally accepted auditing standards applicable in the circumstances and included all procedures which we considered necessary.

In our opinion, the accompanying balance sheets and related statements of income and surplus, together with schedules as listed in the attached index, present fairly the position of the companies at September 30, 1941 and the results of their operations for the three years and nine months ended that date, in conformity with generally accepted accounting principles consistently applied during the period under review.

Kansas City, Missouri,
December 19, 1941.

BALANCE SHEET NOTES
COMPANY AND CONSOLIDATED

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANY

5089

NOTES TO THE BALANCE SHEETS

ATTACHED TO AND MADE AN INTEGRAL PART OF THE BALANCE SHEET (COMPANY ONLY) AND OF THE CONSOLIDATED BALANCE SHEET

As of September 30, 1941

A. (1) Property, plant and equipment and intangibles are stated at cost except for $4,816,350.71 thereof which was recorded at the amount assigned by the Board of Directors to assets acquired as of August 31, 1930 as a capital contribution. It is the belief of the present management of the Company that the amount assigned to the capital contribution represented the value of the assets contributed as determined by the donor, Missouri-Kansas Pipe Line Company. Of the total, $2,417,948.52, representing the amount at which the contributed tangible property was recorded on the books of Missouri-Kansas Pipe Line Company, was assigned to property, plant and equipment, and the balance of $2,398,402.19 was assigned to gas sales and purchase contracts.

(2) Investment in subsidiary company is stated at cost. The securities representing such investment are pledged as collateral to the First Mortgage and First Lien Bonds. In January, 1941, the Company received 807,367 shares of common stock, of a par value of 42 cents each, of Central Distributing Company in exchange for its former investment in that company (represented by no par common stock of $59,000.43, a note receivable of $250,000.00 and a demand loan of $25,000.00) and $5,093.71 additional cash investment. These shares were then distributed as a dividend to the Company's common stockholders, on a share for share basis, with a concurrent charge to earned surplus of $339,094.14.

(3) The amounts at which property, plant and equipment, intangibles and investment in subsidiary company are stated do not purport to represent the current realizable value thereof.

B. Debt discount and expense in process of amortization at September 30, 1941 consists of:

Discount and expense applicable to 6% bond issue redeemed in 1937 prior to original maturity of October 1, 1950 in process of amortizaton over the original life of such issue	$ 829,457.41
Items being amortized on the basis of bonds outstanding over the life of the 4% bond issue redeemed in 1941 prior to original maturity of March 1, 1952—	
Call premium on 6% issue	471,822.61
Debt discount and expense on 4% issue	374,436.79
Items being amortized on the basis of bonds outstanding over the lives of present outstanding issues—	
Call premium on 4% issue	190,061.40
Debt discount and expense on present outstanding issues	215,706.85
	$2,081,485.06

On December 19, 1941, the Board of Directors authorized the charging to earned surplus, as of the date of refunding, February 3, 1941, of the unamortized balance of debt discount, expense and call premiums applicable to refunded issues and the discount and expenses applicable to outstanding issues.

C. Surplus is restricted by the Mortgage and Deed of Trust dated November 1, 1940 as to payment of dividends, in the amount of $4,113,952.58. In the opinion of counsel for the Company, the requirements of Delaware law impose no restrictions on surplus by reason of the excess ($1,100,000 at September 30, 1941) of the liquidating value over the par value of its preferred stock. Class A preferred stock may be redeemed at any time in whole or in part at $100 per share if redeemed on or before January 1, 1942 or $110 per share thereafter.

D. At September 30, 1941 there were 1,285 unissued shares available for exercise of purchase option at $25.00 a share.

E. Contingent liabilities:

Effective January 1, 1940, the Company adopted a retirement annuity plan for employees (including officers) who had not attained age sixty-five on that date, by means of a group annuity

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANY

5091

NOTES TO THE BALANCE SHEETS—(Continued)

ATTACHED TO AND MADE AN INTEGRAL PART OF THE BALANCE SHEET (COMPANY ONLY) AND OF THE CONSOLIDATED BALANCE SHEET

As of September 30, 1941

contract with a life insurance company, which provides, among other things, for (a) premium payments in respect of current annuities and (b) the purchase by payments over a period of years of additional annuities based on age and length of prior employment, both at the expense of the Company. Amounts charged to the income accounts for the year 1940 aggregated $168,700 of which $100,000 applied to past service annuities and for the nine months ended September 30, 1941 aggregated $134,700 of which $75,000 applied to past service annuities. The total cost of the additional annuities based on length of prior employment may vary according to the dates of payments but it is estimated by the Company at approximately $630,000 (based on a payment period of approximately twenty years). The plan by its terms is subject to change or discontinuance by the Company at any time.

The Company has made commitments in connection with expansion of facilities of approximately $4,000,000 at September 30, 1941. The Company represents that there were no other contingent liabilities not reflected in the balance sheet at September 30, 1941, except those set forth in contracts for the purchase and sale of gas.

F. In the consolidated balance sheet the accounts of the subsidiary of the Company have been consolidated with the accounts of the Company. The Company's equity in the net assets of such subsidiary, as shown by the books of the latter, exceeds the aggregate investment, as shown in the Company's books, by $184,549.82, representing undistributed earnings of subsidiary since date of acquisition which has been credited to earned surplus in consolidation.

INCOME ACCOUNT NOTES
CONSOLIDATED

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANIES

5095

NOTES TO THE INCOME ACCOUNT

ATTACHED TO AND MADE A PART OF THE CONSOLIDATED INCOME ACCOUNT

FOR THE YEARS ENDED DECEMBER 31, 1938, 1939, AND 1940 AND THE NINE MONTHS ENDED SEPTEMBER 30, 1941

A. The formulae consistently used by the Company and its subsidiaries beginning with the year 1937 to develop an amount to be recommended to the Board of Directors as a proper provision for depreciation, depletion, and amortization gives consideration to the "wasting asset" theory and provides depletion on operated leaseholds on th basis of units of gas withdrawn, amortization of investment in unoperated land rights by the use of a composite life of ten years for such land rights, amortization of gas sales and purchase contracts at a specific monthly rate as provided in the Company's Certificate of Incorporation and in amounts to conform to the contract period in certain instances, afid an amount for the other transmission system properties determined by its Board of Directors which recognizes amortization in addition to a composite rate based on the age and estimated life of the properties. The propriety of the aggregate annual provision, as well as the reasonableness of the total reserves provided to date, has been substantiated by P. McDonald Biddison, an independent Consulting Engineer of Dallas, Texas. The Company's Certificate of Incorporation, as amended, provides substantially that no dividends on the common stock or any participating dividends on the preferred and common stocks may be paid except out of net surplus earned subsequent to December 31, 1935 remaining after there shall have been deducted therefrom as provisions for depreciation, depletion and amortization of property, plant and equipment, an aggregate accrual equal to one-third of 1% per month (on monthly balances) of the consolidated tangible property of the Company and its subsidiaries; the provisions for depreciation, depletion and amortization of tangible property as computed in accordance with the Company's Certificate of Incorporation would have amounted to $2,337,597.71, $2,354,588.33, $2,378,393.37, and $1,993,360.66 for the years 1938, 1939, 1940, and the nine months ended September 30 1941, respectively. The amounts claimed by the Company and its subsidiaries for depreciation for Federal income tax purposes are larger than the provisions as set forth in the income account.

B. The Company has provided amortization of gas sales and purchase contracts in the amount of $24,419.05 per month, which will extinguish the net ledger balance at December 31, 1935 ($2,930,286.40) over a period of ten years. Of the original amount of gas sales contracts—other, $371,076.00 is being amortized over a period of fifteen years from January 1, 1937 and the remainder is being amortized primarily over the lives of the respective contracts. No provision has been made for the amortization of organization expense and miscellaneous intangibles.

C. It is the practice of the Company to charge to maintenance the repairs of property and replacements and renewals of items determined to be less than units of property. Replacements and renewals of items considered to be units of property are charged to the property, plant and equipment accounts. At the time properties are disposed of, the cost (or estimated cost), less net salvage value, of property retired is charged to the reserve for depreciation, depletion and amortization of property, plant and equipment.

D. Charges in lieu of Federal income and excess profits taxes represent an amount equivalent to such taxes which would have been payable on current earnings if the Company had not had the benefit for tax purposes of deductions for discount, premium and expense resulting from the refinancing of long-term debt. Such amounts have been credited to unamortized debt discount and expense as a partial offset to the items included therein applicable to the bonds which were refunded.

E. Consists of—

	1938	1939	1940	Nine Months Ended September 30, 1941
On issue due October 1, 1950, redeemed in 1937—				
Amortization of debt discount and expense	$ 92,161.80	$ 92,161.80	$ 92,151.80	$ 69,121.35
Amortization of call premium	91,251.89	89,317.23	87,382.56	61,913.94
On issue due March 1, 1952, redeemed in 1941—				
Amortization of debt discount and expense	136,262.81	133,373.84	130,484.88	52,570.64
Amortization of call premium	—	—	—	12,978.60
On present outstanding issues—				
Amortization of debt discount and expense	—	—	—	26,714.08
	$319,676.50	$314,852.87	$310,029.24	$223,298.51

INCOME ACCOUNT NOTES
CONSOLIDATED—(Continued)

5097

PANHANDLE EASTERN PIPE LINE COMPANY AND SUBSIDIARY COMPANIES

NOTES TO THE INCOME ACCOUNT—(Continued)

ATTACHED TO AND MADE A PART OF THE CONSOLIDATED INCOME ACCOUNT

FOR THE YEARS ENDED DECEMBER 31, 1938, 1939, AND 1940 AND THE NINE MONTHS ENDED SEPTEMBER 30, 1941

Reference is made to Note B to the Balance Sheets for details respecting change in amortization of debt discount and expense authorized by the Board of Directors on December 19, 1941 which will result in the restoration to income account of amortization recorded for the period subsequent to February 3, 1941, date of refunding, in the amount of $195,811.91.

F. No profits or losses on sales or other charges to parents or subsidiaries of the Company are included in the consolidated income accounts. Inter-company revenues have been eliminated in consolidation.

G. Due to the seasonal character of the Company's business, its earnings for the nine months ended September 30, 1941 may not necessarily be a correct criterion of its earnings on a twelve months' basis.

EXHIBIT 145. 5105
SCHEDULE VIII
COMPANY AND CONSOLIDATED

[fol. 15091] (Exhibit 147.)

For immediate Release Friday, January 23, 1942

Securities and Exchange Commission, Washington

Holding Company Act Release No. 3286.

In the Matter of

Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation, The Ohio Fuel Gas Company

File Nos. 59-33, 70-263, 70-371, 70-387, 70-430, 70-431

(Public Utility Holding Company Act of 1935)

Findings and Opinion of the Commission

Acquisition of Securities By Registered Holding Company or Subsidiary:

Application pursuant to Section 10 of the Act by non-utility subsidiary company with respect to its acquisition from the parent holding company of the entire stock and debt of another non-utility subsidiary and of a utility subsidiary of the parent at the parent's investment cost therein approved, and declaration by parent under Section 12 (f) of the Act with respect thereto permitted to become effective, subject to the condition that there be eliminated from the investment cost of the parent in the non-utility subsidiary of the undepreciated portion of an item representing a profit paid to another wholly-owned subsidiary of the parent, the Commission making no adverse findings under Sections 10(b) and 10(c) (1) of the Act and finding, with respect to the utility subsidiary, that the acquisition has the tendency required by Section 10 (c) (2) of the Act.

Consideration—Constructive Trust

Where all persons interested in subsidiary acquiesced and gave general releases for substantial consideration and with knowledge of all the facts imposition of constructive trust upon parent holding company in favor of acquiring subsidiary found inappropriate.

Where imposition of constructive trust upon parent in favor of acquiring subsidiary would involve construction of decree of court in light of all circumstances surrounding its issuance when court is engaged in such construction, held matter will be left to determination of court since transactions will not affect rights with respect thereto.

[fol. 15092] Acquisition of Utility Assets by Registered Holding Company or Subsidiary:

Application pursuant to Section 10 of the Act by non-utility subsidiary with respect to its acquisition of utility assets from associate company for consideration measured by sale price of similar properties to a non-affiliate in an arms-length bargain where cost records not available approved, and declartion by associate under Section 12 (f) of the Act with respect thereto permitted to become effective, the Commission making no adverse findings under Section 10 (b) and 10 (c) (1) of the Act and finding, that the acquisition has the tendency required by Section 10 (c) (2) of the Act.

Acquisition of Securities by the Issuer:

Declarations under Section 12 (c) and 12 (f) of the Act with respect to the acquisition by subsidiary company at par of its own securities from parent, intermediate company in holding company system and acquisition by latter at principal amount of its own securities from parent holding company permitted to become effective and applications under Section 10 of the Act with respect thereto approved, to extent that provisions of Section 10 of the Act are applicable.

Consideration—Purchase by Parent of Securities of Subsidiary at Discount

Where subsidiary received full consideration in money or money's worth for claims and all persons interested in transaction acquiesced and executed general releases for valuable consideration and with knowledge of all facts, claim of parent will not be reduced despite fact that there might be basis for contention that claims were purchased by it at discount.

Consideration—Offset Against Parent for Excessive Dividends Received on Securities to be Retired

Commission will take all necessary action to prevent abuse of control by parent to prevent refunding of securities of subsidiary on more favorable terms but will not consider claims and defenses as to past abuse where judicial action is pending with respect thereto, and large minority stockholder, which with parent owns almost entire equity in subsidiary, states matter should be left to judicial determination.

Exemption of Security Issue of Registered Holding Company or Subsidiary

Issue Solely For Purpose of Financing Business of Subsidiary

Application by non-utility subsidiary company pursuant to Section 6 (b) of the Act for exemption from the provisions of Section 6 (a) with respect to the issue and sale of bonds and preferred stock to refund part of outstanding preferred stock and to finance acquisitions and additional construction granted, jurisdiction being reserved with respect to matters arising in competitive bidding.

Propriety of Preferred Stock

While common stock issue is preferable, no condition under Section 6 (b) is imposed with respect thereto where property and earnings ratios are proper and preferred stock is issued with adequate sinking fund provision.

[fol. 15093] Deferred Stock Vote

No normal vote required to be given to preferred stock to be issued where such stock elects majority of directors after four quarterly dividend defaults and two-thirds vote of such stock is required in matters most likely adversely to affect it; and where smaller outstanding issue with right to elect two directors is being considered in pending 11 (b) (2) proceedings which will be given prompt hearing.

Legal Fees

Jurisdiction reserved with regard to legal fees payable by parent holding company and subsidiaries for services in connection with actions approved.

Appearances:

Ambrose Selig, William R. Nowlin and Sidney Willner, for the Public Utilities Division of the Commission.

William H. Button, James B. Alley and Charles R. Lowther, for Columbia Oil & Gasoline Corporation.

Wayne Johnson, Jr., Edward S. Pinney, William Wemple, and Frederick S. Beebe, of Cravath, DeGersdorff, Swain & Wood, for Columbia Gas & Electric Corporation, Michigan Gas Transmission Corporation, and Indiana Gas Distribution Corporation.

Robert J. Bulkley, Arthur Logan, and Russell Hardy, and Richard B. Hand, 111 Broadway, New York, New York, for Missouri Kansas Pipe Line Company.

Edwin N. Goodwin and William L. Glenn, for Panhandle Eastern Pipe Line Company.

James McGlothlin, John F. Mack and J. C. Laylin, for W. H. Danforth.

John D. Ellis, for the City of Cincinnati.

James H. Lee, for the City of Detroit.

Kenneth L. Sater, for the Public Utilities Commission of Ohio.

Eugene Bleiweiss, for Abner Goldman.

The applications and declarations presently before us, pursuant to Sections 6, 7, 9, 10, 12 (c) and 12 (f) of the Public Utility Holding Company Act of 1935 and rules promulgated thereunder, constitute part of a consolidated proceeding and are concerned with the following transactions:

(1) The disposition by Columbia Oil & Gasoline Corporation (hereinaffer referred to as Columbia Oil) to Panhandle Eastern Pipe Line Company (hereinafter referred to as Panhandle Eastern) and the acquisition by the latter of the Class A preferred stock of Panhandle Eastern in the par value of $10,000,000;

[fol. 15094] (2) The sale by Columbia Gas & Electric Corporation (hereinafter referred to as Columbia Gas) to

Panhandle Eastern and the acquisition by the latter of the stock and debt of Michigan Gas Transmission Corporation (hereinafter referred to as Michigan Gas) and of Indiana Gas Distribution Corporation (hereinafter referred to as Indiana Gas) at the alleged investment cost of those companies to Columbia Gas plus undistributed surpluses at the date of the transaction, such prices being, as of September 30, 1941, $10,780,840.59 for Michigan Gas, and $153,698.20 for Indiana Gas; and the sale by The Ohio Fuel Gas Company (hereinafter referred to as Ohio Fuel), a subsidiary of Columbia Gas, to Panhandle Eastern and the acquisition by the latter of certain pipe lines and other property owned by Ohio Fuel in the states of Indiana and Ohio at a price of $439,326.08, which is based on the amount received for the sale of similar property to a non-associated purchaser;

(3) The disposition by Columbia Gas to Columbia Oil and the acquisition by the latter of $11,000,000 face amount of debentures of Columbia Oil held by Columbia Gas;

(4) The issue and sale of securities for the financing by Panhandle Eastern to secure the funds necessary to carry out the transactions described in (1) and (2) supra, as well as for certain additional construction.

History of Proceedings

On May 20, 1941, we ordered[1] a hearing to be held June 3, 1941 on an application by Columbia Gas seeking approval of the acquisition by it of the securities and debt of certain wholly-owned oil and gasoline subsidiary companies of Columbia Oil. That transaction was part of a plan filed with the United States District Court for the District of Delaware on June 20, 1939 by the parties to a pending anti-trust action involving the control by Columbia Gas and Columbia Oil of Panhandle Eastern for the settlement of that action.

During the intervening period, on May 27, 1941, we handed down our Findings, Opinion and Order[2] denying the application of Columbia Oil to be declared not to be a subsidiary of Columbia Gas and denying the application of

[1] Holding Company Act Release No. 2766.
[2] Holding Company Act Release No. 2778.

Panhandle Eastern to be declared not to be a subsidiary of Columbia Oil and of Columbia Gas. In our same order, we granted the application of Panhandle Eastern to be declared not to be a subsidiary of Missouri-Kansas Pipe Line Company (hereinafter referred to as Mokan).

The hearing on the aforementioned application of Columbia Gas was at its request continued subject to call of the Trial Examiner. On June 7, 1941, Columbia Gas, Columbia Oil, and Mokan entered into an agreement modifying the plan previously mentioned for settlement of the pending anti-trust action. Subsequently, Columbia Gas amended its applications and Columbia Oil and Panhandle Eastern filed applications and declarations to obtain our approval of various transactions embodied in the said plan as modified.

[fol. 15095] On August 25, 1941, we issued a notice of and order[3] instituting proceedings under Sections 11 (b) (1), 11 (b) (2), 12 (c), 12 (f), and 15 (f) of the Public Utility Holding Company Act against Columbia Gas, Columbia Oil, Michigan Gas, Indiana Gas, and Panhandle Eastern and consolidated the several applications and declarations with the said proceedings. The hearing on the said consolidated proceeding was set for September 16, 1941, but at the request of Columbia Gas and Columbia Oil was twice postponed until October 14, 1941.

After argument before us, we entered an order[4] on October 15, 1941 granting Mokan, as owner of 42% of the common stock of Panhandle Eastern, the limited right to participate in the proceeding to the extent of adducing evidence, cross-examining witnesses and presenting oral argument. Similar action was taken with respect to William H. Danforth as beneficial owner of 98,756 shares of common stock of Columbia Oil and as trustee of a trust holding 25,934 additional such shares, and to Abner Goldman as the owner of 500 shares of common stock of Columbia Gas (orders having previously been entered granting the applications for intervention as of right of the Public Utilities Commission of Ohio, the City of Cincinnati,

[3] Holding Company Act Release No. 2963.
[4] Holding Company Act Release No. 3078.

and the City of Detroit). In addition, at the request of the Staff and over the opposition of Columbia Oil and Danforth, we ordered that upon the resumption of hearings evidence bearing upon the issues raised under Section 11 (b) (1) should first be introduced and thereafter evidence relating to the remaining issues in the proceeding in accordance with our further directions. At the request of Columbia Oil, the hearings were adjourned until October 28, 1941.

After resumption of the hearings and the introduction of some evidence relating to the 11 (b) (1) issues, discussions were had between the Staff and representatives of the respondents at the request of the latter with respect to the possibility of modifying the order of procedure so as to achieve a more expeditious determination of certain of the issues involved. Accordingly, the latter proposed to file applications and declarations relating to the transactions presently before us and the Staff made a recommendation that the order of procedure as set forth in our order of October 15, 1941 be modified so as to permit consideration of the applications and declarations so to be filed prior to further consideration of the 11 (b) (1) issues.

After argument, on November 7, 1941, held at the request of Mokan, we issued an order[5] on November 14, 1941 overruling the objection of Mokan to the modifications of the order of procedure and consolidating the new applications which had been filed in the intervening time with the consolidated proceeding.

We further ordered that the hearings should be resumed on November 25, 1941, at which time the issues raised by the present applications and declarations should be introduced first, to be followed by the evidence bearing upon the remaining issues under Section 11 (b) (1). In addition, we reserved the right to enter appropriate orders at any time. Accordingly, hearings were held from November 25 to November 29, 1941, inclusive, at which evidence relating to the present filings was introduced.

[fol. 15096] After consideration of the entire record, we make the following findings:

[5]Holding Company Act Release No. 3128.

Brief Description of Applicants and Declarants

Panhandle Eastern, a subsidiary of Columbia Oil and Columbia Gas, is a non-public utility holding and operating company incorporated in Delaware in 1929. It is engaged in the production, purchase, transmission, and sale of natural gas. It taps fields in Texas and Kansas and its lines run through Texas, Oklahoma, Kansas, Missouri, and Illinois to a point on the Indiana-Illinois border near Dana, Indiana, where its line connects with that of Michigan Gas. It has outstanding the following securities:

$12,000,000 Series B 3% Bonds due November 1, 1960

$6,250,000 Series A Bonds due serially November 1, 1946 to November 1, 1950

$5,000,000 of notes due serially November 1, 1942 to November 1, 1945

Class A, $100 par preferred stock,* $6 cumulative, participating	100,000 shares
Class B, $100 par preferred stock,* $6 cumulative, non-participating	10,000 shares
Common Stock, no par (stated value $25 per share).	807,367 shares

*(Class A stock is redeemable, Class B is not).

All of Panhandle Eastern's preferred stock is held beneficially for Columbia Oil, as are also 404,326 shares, or 50.1% of Panhandle Eastern's common stock. 339,475 shares, or 42.0% of the common stock, is owned by Mokan. The remaining 7.9% is in the hands of over 1,700 holders. The bonds of Panhandle Eastern (many of which are bearer bonds) are stated to be held by interests unaffiliated with the Columbia companies.

Columbia Oil, a non-public utility holding company, was incorporated in Delaware in 1930 for the purpose of acquiring from Columbia Gas the oil and gasoline subsidiaries previously owned by the latter. It has outstanding the following securities:

6% debentures due 1956	$20,400,000 principal amount
Preferred Stock, participating (stated value $34,087,500)	400,000 shares
Common Stock, $1 par	2,336,826 shares

Columbia Gas holds all the preferred stock and all of the outstanding debentures. It holds none of the common stock. This stock, issued to Columbia Gas on the formation of Columbia Oil in 1930, was in the same year placed in a voting trust. The voting trust certificates were, in that year, distributed to the holders of Columbia Gas common stock as a dividend. The voting trust was dissolved in [fol. 15097] 1936 as a part of a recapitalization of Columbia Oil, and the common stock was distributed to the holders of the voting trust certificates.

Michigan Gas, a wholly-owned subsidiary of Columbia Gas, is a non-public utility corporation organized in Delaware in 1935. It owns and operates a gas transmission line connecting with the Panhandle Eastern line at Dana, Indiana, and extending to Detroit, Michigan. The gas transmitted through its line is delivered primarily to the Michigan Consolidated Gas Company for the account of Panhandle Eastern. Michigan Gas also owns a pipe line extending from a point on the Detroit line near Zionsville, Indiana, to Muncie, Indiana, where it connects with the line of Ohio Fuel which is proposed to be sold to Panhandle Eastern.

Indiana Gas, a public utility company incorporated in Indiana in 1931, is also a wholly-owned subsidiary of Columbia Gas. It owns distribution facilities in western Indiana located along the transmission lines of Michigan Gas from which it receives all of its gas requirements. It sells gas at retail to approximately 1,800 customers and to one industrial customer.

Ohio Fuel, a subsidiary of Columbia Gas, is a public utility company incorporated in Ohio. It is engaged primarily in the production, transmission, and distribution of natural and manufactured gas in the State of Ohio. Its distribution area is centered in Columbus, Toledo, Zanesville, Springfield, Lorain, Mansfield, Marion, and the areas contiguous thereto.

Acquisition and Disposition of Panhandle Eastern Class A Preferred Stock

As we have previously stated, Columbia Oil holds the entire outstanding issue of Panhandle Eastern's Class A, cumulative participating preferred stock in the par amount of $10,000,000. This stock is entitled to cumulative preferential dividends of $6 a share. In addition, after certain reserve requirements have been met and dividends on the common stock to the extent of $1.50 per share have been declared or paid in any one year, the Class A stock participates in any additional dividends to the extent of 25%. Under the Certificate of Incorporation of Panhandle Eastern, the Class A stock was originally redeemable at any time at par prior to or on July 1, 1941, or at $110 per share thereafter. Various agreements were entered into, however, extending the time in which the Class A stock may be redeemed without payment of the $10 premium. The last such agreement extended the time until April 1, 1942. In its proposal to dispose of the Class A stock to Panhandle Eastern, Columbia Oil proposes to accept par for the stock.

The $10,000,000 par value Class A preferred and the $1,000,000 of Class B preferred stock were issued by Panhandle Eastern on July 1, 1936 in exchange for $11,000,000 of convertible preferred stock. Panhandle Eastern had previously issued $9,400,000 of convertible preferred stock and $1,600,000 of notes convertible into convertible preferred for its 6% promissory notes, in the face amount of $9,891,000, which had been issued for an equivalent amount of cash, plus the unpaid accrued interest thereon of $1,440,789, a total of $11,331,789.

[fol. 15098] Columbia Oil, which received both the Class A and Class B stock, had originally, in 1931 and 1932, acquired directly from Panhandle Eastern one-half of the notes in the face amount of $4,945,500 for that amount of cash, which was advanced to it by Columbia Gas. Mokan, which, like Columbia Oil, at that time owned one-half of the common stock of Panhandle Eastern, caused the one-half of the notes to which it was entitled to subscribe to be issued to its subsidiary, Panhandle Corporation, to which

it also transferred the common stock. Panhandle Corporation pledged the notes and stock of Panhandle Eastern so received by it to a group of bankers (hereinafter called the Hillman group) as security for its own collateral trust notes in the face amount of $4,940,000. These notes were guaranteed by Mokan which, in addition, borrowed $1,060,000 from the Hillman group on its own notes, secured inter alia, by 900 of the 1,000 shares of Panhandle Corporation stock.

In March, 1932, receivers were appointed for Mokan. The claim of the Hillman group on the Mokan notes was liquidated by the receipt by it of cash plus 750 shares of Panhandle Corporation stock. The interest of Mokan, or its receivers, in Panhandle Eastern was thus reduced to a one-quarter interest in the pledgor's equity of Panhandle Corporation in one-half of the common stock and notes of Panhandle Eastern.

On March 2, 1934, Panhandle Eastern failed to pay interest on its notes. On March 15, 1934, the Panhandle Corporation notes, whose maturity date had been extended, with the consent of 98% of the noteholders, for one year from March 15, 1933, became due, but the corporation defaulted in the payment of both interest and principal.

This situation remained unchanged, except for the accrual of unpaid interest on the notes of both Panhandle Eastern and Panhandle Corporation, until the settlement agreement dated June 1, 1936. During the intervening period, however, viz. in March 1935, a civil anti-trust suit was brought by the Department of Justice against Columbia Gas, Columbia Oil, certain of their respective directors, and Hillman, et al, charging them with mismanagement and financial strangulation of Panhandle Eastern. In July 1935, an action for treble damages in the amount of $180,000,000 was brought by the Mokan receivers against the same persons upon identical contentions.

In June 1935, after the commencement of the government anti-trust suit but before the action of the Mokan receivers, Columbia Oil offered to purchase from the Hill-

man group and other noteholders their interests in Panhandle Corporation on condition that the anti-trust suit be settled so as to allow Columbia Oil to retain its interest in Panhandle Eastern. On January 29, 1936, a stipulation and Consent Decree were entered into between the Department of Justice and the defendants, providing inter alia for such retention upon certain conditions. Moreover, after a series of negotiations, an over-all settlement was made with the Mokan receivers of their various claims arising from the alleged mis-management of Panhandle Eastern, the essential terms of which were approved by the Delaware Court having jurisdiction over the receivership. This agreement was consummated on June 5, 1936, and was dated as of June 1, 1936.

[fol. 15099] For the purpose of carrying out the terms of the stipulation and Consent Decree as well as the settlement, Columbia Oil purchased the securities of Panhandle Corporation from the Hillman group and other holders of Panhandle Corporation notes, paying $4,183,393.92 for the notes of that corporation in the face amount of $4,940,000 secured by the notes and stock of Panhandle Eastern, and paying $693,671.71 for the 750 shares of the Panhandle Corporation common stock held by the Hillman group. In addition, it advanced $213,092.58 to Panhandle Corporation for its debts and expenses, paid the receivers of Mokan $300,000 in cash, released Mokan from its guaranty of the notes of Panhandle Corporation, and from its liability to Panhandle Eastern in the amount of $42,606.74, recapitalized Panhandle Eastern and gave to the Mokan receivers half of the common stock of Panhandle Eastern. Columbia Oil itself received the Class A and Class B stock upon surrender of the convertible preferred which in turn had been issued for the promissory notes as aforesaid. The Mokan receivers, in exchange, surrendered their 250 shares in Panhandle Corporation and released Columbia Oil, Columbia Gas, their directors, and Hillman from all claims and causes of action on their own account and that of Panhandle Eastern for all past derelictions. Columbia Gas, among other things, recapitalized Columbia Oil, surrendered its claims for unpaid dividends, reduced the dividend rights on the new preferred shares,

and reduced interest rates on the debt due to Columbia Gas.

As as has been stated, the Class A preferred is, by its terms, redeemable. During 1938 the management of Panhandle Eastern discussed the possibility of refunding it by the issuance of a security without the participation feature and with a lower preferential dividend rate. These proposals envisaged the substitution of a convertible preferred and were objected to by Mokan for that reason, since the conversion of such stock would strengthen Columbia Oil's control over Panhandle Eastern. In July, 1939, however, offers were made by banking groups to market a cumulative, non-convertible, non-participating preferred bearing dividends of 4½ to 5%, the proceeds of which could be used to retire the Class A stock.

In December of 1938, the Department of Justice had petioned to reopen the Consent Decree on the ground that the Decree had failed to accomplish its objective, the divestment of the control of Columbia Gas over Panhandle Eastern. In June, 1939, Columbia Gas and Columbia Oil entered into a new settlement agreement, which, with certain conditions, obtained the acquiescence of the Department of Justice and the approval of the court having jurisdiction over the Consent Decree. One of the provisions of that agreement was that the Class A stock should be refunded. A common stockholder of Columbia Gas brought an action to restrain the carrying out of the settlement plan on the ground that some of its provisions were unfair to that company. Columbia Oil refused and continued to refuse to permit the refunding of the Class A stock unless the other provisions of the plan were simultaneously consummated. In its present declaration, however, it consents to such refunding without regard to the action taken with respect to such collateral transactions other than those involved herein.

There seems to be no question but that the retirement of the Class A stock by Panhandle Eastern is in the interest of the public and of investors and consumers, in that it will permit the substitution of securities having far less [fol. 15100] burdensome terms. The problems raised by the application and declarations with respect to the pro-

posed transaction relate solely to the price to be paid for the stock. The charter originally provided for the payment of a ten-point premium per share if the redemption is not out of earnings and takes place subsequent to July 1, 1941. Columbia Oil by agreement extended such time for redemption without premium until April 1, 1942, and in its application waives the premium entirely. We have no difficulty in approving such waiver in the circumstances here present, including the interference by Columbia Oil with the proposed earlier redemption.

The circumstances surrounding the origin of the stock have been reviewed with great care in line with our policy, heretofore announced and applied, of preventing holding companies from exercising their controlling influence and strategic position with respect to their subsidiaries so as to profit at the expense of other interests therein. In the present case, despite the evident difficulties in any attempt at allocation of the cost items, there may be some basis for a contention that Columbia Oil purchased the claims which ripened into the Class A and Class B stock at a discount. There are, however, two countervailing factors. The first is the Panhandle Eastern itself received full value in money or money's worth for the stock in the surrender of the promissory notes and the unpaid accrued interest thereon in the total amount of $11,331,000. The second and more important is that the only other groups even contingently interested in the corporation at that time, to-wit, the Hillman group and the Mokan receivers, acquiesced in the purchase of the claims and the issuance of the securities with full knowledge of the facts and as part of a total settlement of all claims and cross claims. These considerations make it unnecessary in the present situation to limit the claim to cost.

In view of the pendency of a judicial action to cause Columbia Oil to account for any excessive dividends received by it as a result of its refusal to permit the earlier refunding of the Class A stock, we shall in the present instance make no ruling as to the propriety of offsetting that item against the price to be paid for the stock. The matter is one lending itself to a judicial determination and Mokan, by far the largest minority stockholder in Panhandle Eastern, has stated that the issues involved should be left to such de-

termination. While so ruling in the present instance, giving weight to the present acquiescence to the refunding, and without attempting to pass upon the merits of such claims and defenses as may be present in the pending action, we take the opportunity to warn against the interference by holding companies with desirable refinancing of subsidiary companies and to indicate that all necessary measures will be taken to deal with such abuse wherever it may be found.

Since we find no reason to modify the price to be paid for the stock and since in all other respects the standards of Section 12 (c) and, to the extent to which they may be applicable, the requirements of Section 10 are clearly complied with, the application and declarations with respect to the disposition and acquisition of the Class A stock at par are approved as filed.

[fol. 15101] Sale and Acquisition of Michigan Gas, Indiana Gas and Ohio Fuel Properties

There again seems to be no question among the many conflicting interests represented in the present proceeding that it is in the public interest that Michigan Gas be acquired by Panhandle Eastern. The functional relationship of Michigan Gas to Panhandle Eastern and its lack of such relationship to the remainder of the Columbia Gas system would seem clearly to support this conclusion.

Michigan Gas was built in the first instance as an extension of Panhandle Eastern, giving the latter an outlet to the Detroit market. All the gas sold or transported by Michigan Gas since 1937 has been gas taken from the Panhandle Eastern line and at the present time Michigan Gas is engaged principally in transporting gas for the account of Panhandle Eastern. The only portion of the remainder of the Columbia Gas system to which gas is delivered through the Michigan Gas line is Indiana Gas, which it is also proposed that Panhandle Eastern acquire as part of the same transaction.

Similarly, Indiana Gas and the pipe lines of Ohio Fuel proposed to be acquired by Panhandle Eastern bear no operating relationship to any portion of the Columbia system other than Panhandle Eastern and Michigan Gas.

In brief, Panhandle Eastern together with Michigan Gas, Indiana Gas, and the Ohio Fuel lines and property proposed to be acquired themselves constitutes an inter-related gas production, transmission and distribution system which is entirely separate from and unrelated to any of the other activities of the Columbia system, deriving its gas in a different area and distributing it in different markets.

As an intra-system transaction, the sale and acquisition will, of course, have no tendency toward interlocking relationships or the concentration of control of public utility companies so as to contravene the provisions of Section 10 (b) (1). So also, not only will the acquisition not tend unduly to complicate the capital structure of the Columbia Gas system within the meaning of Section 10 (b) (3) but it should ultimately, at least, result in a simplification of the system and its capital structure.

While we are not, at the present time, concerned directly with that portion of the consolidated proceeding relating to the divorcement of Panhandle Eastern from Columbia Gas, it has already been noted that the retention of control over the former by the latter has been the subject of an anti-trust suit brought by the Department of Justice and that in its Petition of December 1938, to reopen the Consent Decree, previously entered in the action, the Department of Justice based its contention that the Consent Decree had been ineffective to achieve the results sought to be accomplished therein, principally on the ground that the control by Columbia Gas of Michigan Gas has enabled it to exercise a control, contrary to the public interest, over Panhandle Eastern. Without making any attempt to pass upon the merits of this contention, the conclusion seems permissible that the proposed sale and acquisition may reasonably be deemed not to be detrimental to the interests of consumers but should prove beneficial.

[fol. 15102] Since Michigan Gas is a non-utility operating company, the transaction, insofar as it concerns it, must be tested under the standards of Section 10 (c) (1) rather than those of Section 10 (c) (2). As is apparent from the foregoing discussion, it not only would satisfy the requirements of either subsection since the sale and acquisition are not contrary to the requirements

of Section 11 but might well be required as a step toward the economical and efficient development of an integrated Columbia Gas System. The interests in Indiana Gas and the Ohio Fuel pipe lines do constitute securities and utility assets of public-utility companies, respectively, but here again by reason of their lack of relationship to the Columbia Gas system, their sale as a step in their divorcement from the system will tend toward compliance with Section 11 (b) (1). Hence, no adverse findings need be made with respect to the proposed transactions under Section 10 (c).

An opinion of counsel has been submitted to the effect that all state laws applicable to the proposed transactions have been complied with. Since nothing appears to the contrary, the provisions of Section 10 (f) are satisfied.

The price fixed in the applications for the sale and acquisition of Michigan Gas is stated to be the actual investment of Columbia Gas therein plus any undistributed surplus of Michigan Gas at the time of the consummation of the transaction. With the exception of one item, the record indicates that the figure stated in the application, $19,780,840.59, as constituting the investment of Columbia Gas in Michigan Gas plus surplus at September 30, 1941, constitutes actual system expenditures and is equal to net plant account after depreciation less the excess of current liabilities over current assets.

The one questionable item is the amount of $139,424 paid as a fee by Indiana Gas Transmission Corporation, a company subsequently merged into Michigan Gas, to The Columbia Gas Construction Company, another wholly-owned subsidiary of Columbia Gas. This item represents an intercompany profit. At the hearing, a representative of Columbia Gas sought to justify the inclusion of this item in the investment by reason of the implied limitation contained in Rule U-90 to intercompany transactions subsequent to the passage of the Act since the fee in question was paid prior to that time. The question here, however, is not whether the fee was a proper expense to Michigan Gas or was properly received by The Columbia Gas Construction Company, but it is whether it properly

constitutes an investment by Columbia Gas in Michigan Gas. Since Columbia Gas, as the sole owner of The Columbia Gas Construction Company, in effect, received the profit which Michigan Gas paid, it cannot possibly be claimed that it represents a system expenditure in Michigan Gas, and hence is not properly included in the investment account. It appears from the record, however, that this item had been depreciated as of September 30, 1941 in the amount of $34,500 since it was set up. We shall, therefore, not allow the undepreciated portion of this item ($104,924 as of September 30, 1941) to be included in the computation of the price. Columbia Gas has agreed to the exclusion of this item.

A more fundamental question arises with respect to the propriety of the basis employed, i.e., investment cost, in computing the price. It has been suggested that Columbia Gas cannot be considered the beneficial owner of Michigan Gas, but occupies, instead, the position of a constructive trustee and that the price should be computed on that basis, subtracting from the investment of Columbia Gas in Michigan Gas the profits which it has received since its construction.

[fol. 15103] There would seem to be no question but that Panhandle Eastern was subject to a controlling influence by Columbia Gas at the time of the construction of the "Detroit Extension." Such conclusion is inescapable from the record and our previous Findings and Opinion in passing upon applications of Panhandle Eastern and Columbia Oil under Section 2 (a) (8)[6]. It is equally clear that the extension might well be considered a corporate opportunity belonging to Panhandle Eastern as a natural and necessary adjunct to its operations, bearing little relation to the operations of the remainder of the Columbia system. While Panhandle Eastern was unable at the time itself to finance the construction of the extension by reason of insolvency resulting from the default on its 6% promissory notes, there is some indication that this might have been the result of the wrongful exercise of their control by the Columbia interests. Moreover, under the decision in Irving Trust Co. v. Deutsch, 73 F. (2d) 121, such

[6] Holding Company Act Release No. 2778.

financial inability even if it existed would not constitute a defense to Columbia Gas for its breach of fiduciary obligation in appropriating the corporate opportunity.

Again, however, it must be noted that the only persons even contingently interested in Panhandle Eastern at the time of the "wrong" other than Columbia Gas and Columbia Oil were the receivers and the Hillman group. They were therefore the sole beneficiaries of the fiduciary obligation imposed on Columbia Gas by reason of its control over Panhandle Eastern. Accordingly, the transactions with those groups under the settlement agreement of June 1, 1936, approximately seven months after the organization of Michigan Gas and at a time when the Detroit extension was almost completed, would seem to make inappropriate the imposition of constructive trust on the above theory.

Mokan, however, has advanced the contention that the releases then given expressly excepted such rights as might flow from the agreement itself and from the Consent Decree and that the latter properly construed makes it clear "that the ownership of Michigan Gas stock and indebtedness by Columbia Gas, cannot be a full beneficial ownership, but must be only such ownership as will secure the repayment of advances." The portion of the Consent Decree relied upon for this position is as follows:

"That the defendants be and they are hereby perpetually enjoined from *** interfering in any manner in the freedom of Panhandle Eastern to contract or to finance or arrange the financing of all contracts, extensions (including the proposed new line to Detroit, whether or not built and owned by it), ***.

"That if such contracts be made with or financial assistance be secured from Columbia Gas, such contracts may be made or financial assistance furnished upon terms or conditions which do not in any way, directly or indirectly, presently or potentially, *** confer any rights of ownership in the works or properties of Panhandle Eastern except as security for the investment *****."

If is apparent from reading the matter above quoted that any attempt to give the decree the claimed effect

would involve the construction of the mandate of a court in the light of all the circumstances surrounding its issuance at a time when that very court itself is being asked to construe it. We therefore again find it inappropriate to pass upon the merits of the issue. Our present ruling will, of course, not affect any rights of action or to an accounting which Panhandle Eastern or its stockholders may have.

[fol 15104] A capitalization of the present earnings of Michigan Gas might justify a higher price than investment cost in an arm's-length bargain. Here again, countervailing factors, difficult to assess, are present. The rates charged by both Michigan Gas and Panhandle Eastern giving rise to the present earnings are being reviewed at the present time by the Federal Power Commission and may be subject to a downward revision. Moreover, the allocation of earnings between Panhandle Eastern and Michigan Gas is based upon a contract between the parties, which might be subject to some question. In view of all the attendant circumstances we conclude that the sale of Michigan Gas at a price based upon Columbia Gas's investment cost as adjusted herein is not unreasonable.

The proposed price for Indiana Gas, $153,698.20 also represents actual investment of Columbia Gas therein and no question has been raised nor does any appear in the record with respect to the computation of such investment or its use as a basis.

The proposed price of Ohio Fuel properties is $439,326.08. This price is considerably below the estimated original cost of the lines and is based upon the sale price in an arm's-length transaction to a non-affiliate of similar properties in the same area. No adequate cost figure is available and so far as appears from the record, the price represents a reasonable approximation to the value of the property.

The applications and declarations with respect to these transactions are therefore approved except that we direct that the price to be paid to Columbia Gas for Michigan Gas shall not include the item of $104,924 as of September 30, 1941, described above.

Acquisition and Disposition of Columbia Oil Debentures.

By reason of the recapitalization of 1936 and subsequent advances in that year and 1937 from Columbia Gas to Columbia Oil, Columbia Gas received $21,000,000 of Columbia Oil debentures carrying interest of 3% for two years and increasing 1% a year until February, 1940, when the interest rate became 6%. Through the operation of the sinking fund provision, the face amount of debentures outstanding has been reduced by $600,000 so that it is now $20,400,000. In the present application and declarations, Columbia Oil is to use the $10,000,000 to be received by it from the disposition of the Panhandle Eastern Class A preferred stock plus $1,000,000 of cash now held by it for the redemption of $11,000,000 face amount of the debentures at their face amount. In its declaration, Columbia Gas has agreed to accept the face amount, thereby waiving the four-point premium now payable on retirement of the debentures under the terms thereof.

The reduction of the outstanding debt of Columbia Oil by the amount proposed and the receipt by Columbia Gas of an equivalent amount of cash are in the public interest and in the interest of investors of both companies as well as of consumers. The transaction complies with the requirements of Sections 12 (c) and 12 (f) as well as the standards of Section 10, to the extent that the latter are applicable.

[fol. 15105] Proposed Financing By Panhandle Eastern

Panhandle Eastern proposes to issue and sell $10,000,000 of First Mortgage Bonds and $15,000,000 par value of preferred stock at competitive bidding.

It proposes to devote the proceeds from these securities, plus cash on hand and to be derived from operations, to the following purposes:

(1) Retirement of its Class A Preferred Stock		$10,000,000
(2) Acquisition of Assets:		
Stock and debt of Michigan Gas	$10,675,917 [7]	
Stock and debt of Indiana Gas	153,698 [7]	
Lines of Ohio Fuel Gas	439,326	11,268,941

[7] As of September 30, 1941. The price includes undistributed surplus, which may be paid up to Columbia prior to the sale.

(3) Construction Expenditures:

Panhandle Eastern	$8,493,700	
Illinois Natural Gas	254,300	$8,748,000
		$30,016,941

The construction program indicated consists of the extension of Panhandle Eastern's lines into the state of Michigan so as to supply natural gas to Consumers Power Company; the increase of the capacity of its main line from Texas to Dana, Indiana, through the construction of 146 miles of looping; and additions to compressor facilities. It is estimated that the construction will be completed by the middle of 1942.

Fixed Assets

At September 30, 1941 the fixed assets of Panhandle Eastern on a consolidated basis and of Michigan Gas, Indiana Gas and the Ohio Fuel properties to be acquired were as follows:

	Gross Tangible Property	Intangibles (Net)	Total Fixed Assets
Panhandle Eastern (consolidated)	$65,502,541	$1,782,468	$67,285,009
Michigan Gas	12,533,353	84,000	12,617,353
Indiana Gas	184,581	11,414	195,995
Ohio Fuel properties	439,326 [a]	—	439,326 [a]
	$78,659,801	$1,877,882	$80,537,683

Panhandle Eastern states that its property account is stated at cost, except for certain "local area property," having a present book value of $1,918,149[b], which was donated to Panhandle Eastern by Mokan as of August 31, 1930 in accordance with the terms of the September 17, [fol. 15106] 1930 contract which also provided for the sale of half of Mokan's interest in Panhandle Eastern to Columbia Oil. The intangibles represent the valuation of gas

[a] Represents the proposed price of the properties. Their gross ledger value on the books of Ohio Fuel is approximately $677,400.

[b] The original valuation of these properties of $2,417,949 was the same as that on the books of Mokan, but this amount appears to have reflected profits to affiliated interests aggregating $771,893.

purchase and sale contracts and appear to include substantial write-ups.[10] The intangibles have been and are being amortized and the largest items will be written off completely by December 31, 1945.

The property accounts of Michigan Gas and Indiana Gas are allegedly stated at original cost, as defined by The Federal Power Commission, except for the $139,424 construction fee described hereinbefore. The intangibles of Michigan Gas represent, for the most part, legal fees incurred in connection with gas contracts, and there are $48,870 of other legal fees included in tangible property account, resulting in a total of $123,937 of legal fees in the fixed asset account.

Reserves For Depreciation, Depletion and Amortization

The reserves for depreciation, depletion and amortization of Panhandle Eastern, Michigan Gas, and Indiana Gas at September 30, 1941 were as follows:

		% of Property [11]
Panhandle Eastern (consolidated)	$10,526,505	16 3
Michigan Gas	1,597,032	13 0
Indiana Gas	26,559	14 1
	$12,150,096	15 7

Panhandle Eastern provides reserves for depletion on operated leaseholds on the basis of units of gas withdrawn, amortization of unoperated leaseholds on the basis of a ten-year life, and depreciation on transmission properties on a basis including the estimated life of the gas reserves as well as the estimated life of the transmission properties. The ratio of accruals of Panhandle and its subsidi-

[10] As of August 31, 1930, $2,398,402 was debited to intangibles to record the valuation of certain gas contracts donated by Mokan. Such contracts had been carried on the books of Mokan at $926,250, and it appears that this valuation represented largely the stated value of stock issued to affiliated interests for contracts acquired by such interests without cost.

[11] Excluding construction work in progress and, in the case of Panhandle Eastern, intangible assets, for which a separate reserve is provided; in the case of Michigan and Indiana, the figure includes intangible assets, as one reserve is provided for all fixed assets.

aries to the tangible property at the beginning of the calendar year has been as follows:

1938	2.99%
1939	3.20%
1940	3.19%

An independent geologist has estimated that the minimum life of the gas reserves is 25 years. It was testified that the company could, without difficulty, acquire reserves sufficient for 30 to 35 years after allowing for a greatly expanded market in Michigan.

[fol. 15107] Michigan Gas and Indiana Gas have respectively appropriated 3% and 2% annually for their property reserves.

The relationship of Panhandle Eastern's debt and preferred stock to consolidated fixed assets as of September 30, 1941, actual and pro forma, is as follows:

	Actual	Pro Forma [12]
	%	%
Funded debt to Fixed Assets, including Intangibles (Net)	34.6	37.2
Funded debt to Tangible Property	35.5	38.0
Funded debt to Fixed Assets, including Intangibles, less Reserves	41.0	43.0
Funded debt to Net Tangible Property	42.3	44.1
Funded debt and Preferred Stock to Net Tangible Property	62.3	65.3

The present (as of September 30, 1941) and pro forma consolidated capitalization of Panhandle Eastern is as follows:

	Actual		Pro Forma	
Consolidated	Amount	%	Amount	%
Funded Debt				
1st Mortgage Series A, 1946-1950	$6,250,000	10.28	$6,250,000	8.25
1st Mortgage Series B, S.F. 3's 1960	12,000,000	19.75	12,000,000	15.83
1st Mortgage Series C, S.F. 3's 1962	—		10,000,000	13.20
Serial Notes, 1942-1945	5,000,000	8.23	5,000,000	6.60
Leasehold Purchase Obligation	14,256	.02	14,256	.02
	$23,264,256	32.28	$33,264,256	43.90

[12] After allowing for the acquisition of Michigan Gas, Indiana Gas, and the lines of Ohio Fuel and for the construction of authorized but unpaid for property additions as of September 30, 1941.

Preferred Stock				
Class A	$10,000,000	16.46	$ —	—
Class B	1,000,000	1.64	1,000,000	1.32
Cumulative Preferred			15,000,000	19.80
	$11,000,000	18.10	$16,000,000	21.12
Common and Surplus				
Common Stock — 807,367 sh.	$20,184,175	33.21	$20,184,175	26.64
Earned Surplus	6,323,041 [13]	10.41	6,323,041 [13]	8.35
	26,507,216	43.62	26,507,216	34.99
	$60,771,472	100.00	$75,771,472	100.00

[fol. 15108] Earnings

Comparative consolidated income and expense statements of Panhandle Eastern Pipe Line Company are summarized below, given to the nearest thousand dollars:

			12 Mos. Ended Sept. 30, 1941	
	1939	1940	Actual	Pro Forma
Gross Income	$5,616	$5,728	$5,461	$6,489 [14]
Interest on Funded Debt	923	908	662	841 [15]
Other Interest and Fixed Charges	329	276	297	280 [16]
Total Fixed Charges	$1,252	$1,179	$ 959	$1,121
Net Income	$4,364	$4,548	$4,502	$5,368
Preferred Dividend Requirements	660	660	660	735 [17]

[13] After deduction from surplus of $2,081,485 of debt discount and expense and call premiums, such items having been written off since September 30, 1941.

[14] After the acquisition of Michigan Gas and Indiana Gas, but without allowing for either increased revenues from new property construction or changes in income taxes or excess profits taxes.

[15] Adjusted to give effect to a refunding of the funded debt on February 3, 1941, and assuming the issuance of $10,000,000 principal amount of 3% bonds.

[16] Without allowing for the charge-off of unamortized debt discount and expense and call premiums. (See Note to capitalization chart).

[17] Assuming the retirement of the A stock and the issuance of $15,000,000 of 4½% Preferred Stock.

Net to Common and Participating Preferred	$3,704	$3,888	$3,842	—
Net to Common only	—	—	—	$4,633

The margin of earnings protection for the securities in terms of times requirements earned is summarized as follows:

			12 Mos. Ended Sept. 30, 1941	
	1939	1940	Actual	Pro Forma
Times earned:				
Interest on Funded Debt	6.08	6.34	8.25	7.72
Fixed Charges	4.49	4.86	5.69	5.79
Preferred Dividend Requirements	6.61	6.89	6.82	7.30
Fixed Charges and Preferred Dividends	2.94	3.11	3.37	3.50
Earned per Share of Common	$4.59 [18]	$4.82 [18]	$4.76 [18]	$5.74

[fol. 15109] It must be pointed out that Panhandle Eastern Pipe Line Company's earnings are perhaps at flood tide at the present time in view of the rapid increase in the volume of its business due both to expansion of the territory served and to the defense activity in the areas served. There is at present pending before the Federal Power Commission a rate case to determine a proper charge of Panhandle Eastern Pipe Line Company to make for the gas sold to Michigan Consolidated Gas Company, the most important single customer. The earnings coverage which might be expected as a result of a drastic rate cut, if such rate cut is made, followed by depressed business conditions is, of course, impossible to estimate, but it is probable that Panhandle will be able to recover some revenues lost in such a rate cut through increased business as a consequence not only of lower rates but of expanding into new markets and continuing to develop old markets.

The Securities to be Issued

A. The Bonds

Security. The Series C Bonds will be issued under an Indenture dated November 1, 1940 (under which the

[18] Without allowing for participating dividends on the A preferred stock.

Series A and B Bonds were issued) and under a Supplemental Indenture dated January 1, 1942 from the company to City Bank Farmers Trust Company and James M. Kemper, as Trustees. They will be secured by all fixed properties of Panhandle Eastern, with minor exceptions having an aggregate book value of $3,135,000, as well as by all the securities of Illinois Natural Gas Company, a wholly-owned subsidiary of Panhandle Eastern. Panhandle Eastern agrees in the supplemental indenture not to pledge or hypothecate any of the securities of Michigan Gas nor to allow Michigan Gas to incur any indebtedness, with certain limited exceptions, other than to Panhandle Eastern; and that within two years Michigan Gas will be either merged with Panhandle Eastern or brought under the terms of the indenture as a qualified subsidiary.

Additional Bonds. The indenture provides that additional bonds may be issued to the extent of 60% of property additions. The bonds issuable against Michigan Gas upon its merger with Panhandle Eastern or its qualification under the indenture are limited to $4,000,000.

Sinking Fund. Through serial maturities and the operation of a sinking fund, all the presently outstanding funded debt will be retired by 1950. The supplemental indenture will likewise provide for a sinking fund for the Series C Bonds sufficient to retire all but $500,000 principal amount by the date of maturity, January 1, 1962.

Maintenance and Construction Clause. The supplemental indenture will provide that the company will annually pay, in cash, to the trustee any excess of 3% of consolidated gross tangible property, computed monthly, over the actual expenditures for maintenance, additions to property (including renewals and replacements), retirement of bonds of the presently outstanding serial notes, and retirement of preferred stock other than that refunded by substitution of other stock. Properties constructed or acquired under the maintenance and construction clause are to be considered as bonded.

[fol. 15110] Dividend Provisions. The original indenture restricts dividends and other distributions on capital stock,

including purchase and redemption, to surplus per books earned since January 1, 1940 plus $1,500,000. The supplemental indenture will provide, in addition, that in computing such earned surplus in connection with dividends or distributions on common stock the surplus per books shall be adjusted by deducting therefrom the 3% of gross property per year, computed monthly as required in the maintenance and construction clause, and by adding thereto the actual book provisions for maintenance, depreciation and depletion.

Redemption Provisions. The Series C Bonds may be called at any time in whole or in part in principal amounts of at least $500,000 on 30 days' notice, at call premiums ranging from three points above the price at which the bonds are initially offered to the public by underwriters or the price to private purchasers, as the case may be, to zero on January 1, 1961. There are special redemption prices for the sinking fund, the initial call price being one-half of 1% above the price to the public or private purchasers.

B. Preferred Stock

Panhandle Eastern proposes to create a new class of Cumulative Preferred Stock, $100 par value, having a total of 250,000 authorized shares, and proposes to issue 150,000 shares thereof at this time. The dividend rate and the price are to be fixed by competitive bidding. The involuntary liquidating value of the present issue is to be $100 per share plus accrued dividends and the voluntary liquidating value will be equivalent to the redemption price.

Issuance of Additional Shares. The charter as amended will provide that additional series of the proposed new Cumulative Preferred Stock may not be issued without the approval of the holders of two-thirds of the series presently to be issued unless (a) earnings are at least equal to one and one-half times interest charges and Preferred Stock dividend requirements (including the requirements on the series then to be issued) or twice the Preferred Stock dividend requirements, whichever is greater; and (b) common capital and surplus must be at least equal to

the par value of the Preferred Stock outstanding and then to be issued.

Limitation on Unsecured Debt. The Preferred Stock certificate with respect to the proposed issue limits the amount of unsecured indebtedness which may be issued to $15,000,000 (including the presently outstanding serial notes) or to 10% of bonds, capital, and surplus, whichever is greater, unless a greater amount is authorized by the vote of the holders of at least two-thirds of the Cumulative Preferred Stock. Unless authorized by a similar vote, the amount of unsecured debt maturing in two years or less is to be limited to 10% of bonds, capital, and surplus, and no unsecured debt is to have a maturity of more than ten years.

[fol. 15111] Limitation on Common Stock Dividends. The certificate with respect to the proposed issue of Preferred Stock provides that unless authorized by a two-thirds vote of the holders of the Cumulative Preferred Stock, no dividends or other distribution on the common stock may be made unless after such dividend or distribution the total common capital and surplus will be at least equal to the par value of all outstanding shares of Cumulative Preferred Stock.

Voting Provisions. The Preferred Stock presently to be issued is to have no normal vote in the election of directors or for any other purpose except that whenever there may have been a default in the payment of a total of four quarterly dividends it is to have the right, as a class, to elect the smallest number constituting a majority of the board of directors and such right is to continue until all dividend arrearages have been paid. After the fourth quarterly default, the company will, at the request of any preferred stockholder, send notices to the stockholders entitled to vote, calling a stockholders' meeting for the purpose of electing a new board of directors. In addition, approval by the holders of two-thirds of the shares of any series of Cumulative Preferred Stock is to be necessary for any change in the certificate of incorporation or any other corporate action adversely affecting the rights, preferences, or powers of any such series; and the approval of

at least two-thirds of the then outstanding shares of Cumulative Preferred Stock is to be required for the authorization or creation of any additional class of stock ranking prior to or on a parity with such Cumulative Preferred Stock in respect of dividends or assets, or the authorization or creation of any stock or obligations convertible into or with the rights to purchase any such stock. Approval by two-thirds of the Cumulative Preferred Stock is also to be required for the sale, lease, transfer, or conveyance of all or a greater part of the property or business of the corporation, for its voluntary liquidation or dissolution, or for its merger or consolidation with any company other than Michigan Gas or Illinois Natural Gas, except where any such transaction has been approved by us pursuant to the Public Utility Holding Company Act.

Any new series of Cumulative Preferred Stock may have such additional voting rights as the board of directors may determine prior to its issuance except that no such stock shall have more than one vote per share in the election of directors.

Redemption Provisions. The Company may, at any time, redeem the whole or any part of the proposed issue of Preferred Stock at a price equal to the price at which such stock is initially offered by the underwriters to the public or sold by the Company to private purchasers, as the case may be, plus $4 and accrued dividends.

Sinking Fund. The certificate relating to the Preferred Stock provides that the Company will set aside as a sinking fund on April 1, 1942 $100,000 and on April 1 of each succeeding year (a) a "fixed sinking fund" sufficient to redeem at the sinking fund redemption price 1½% of the largest amount of such stock at any time outstanding and (b) a "contingent sinking fund" equal to the lesser of (1) a sum sufficient to redeem at the sinking fund redemption price 2% of the largest amount of such stock at any time outstanding or (2) a sum equal to the balance of earnings applicable to the contingent sinking fund after the payment of Preferred Stock dividends and after the payment of the fixed sinking fund, but before the payment of any

common stock dividends. The price at which stock may be redeemed through the sinking fund will be the price at which the stock is initially offered by underwriters to the [fol. 15112] public or sold by the Company to private purchasers, as the case may be, plus $1 and accrued dividends.

Assuming that the contingent sinking fund operates regularly all of the present issue of Preferred Stock will be retired within a period of 28 years.

Competitive Bidding

In compliance with Rule U-50, Panhandle Eastern proposes to make a public invitation for proposals for the purchase of the securities to be issued. According to the arrangement both individuals and groups may submit bids upon either the issue of bonds or the issue of preferred stock or both. A bidder for both issues must also submit a separate bid for each issue. Each bid must be accompanied by a deposit equal to 5% of the principal or par amount of the issue or issues for which it is made. A bidder for both issues need not make an additional deposit for the separate bids required. The company reserves the right to reject all bids but can accept only the bid or bids providing for the lowest annual money cost computed in accordance with a stated formula. The deposits of unsuccessful bidders will be returned.

The successful bidder will enter into a detailed purchase contract with the issuer. This contract is contingent, among other things, upon a favorable legal opinion by counsel selected by the issuer to represent prospective purchasers. The counsel selected by Panhandle Eastern for this purpose is the firm of Chadbourne, Hunt, Jaeckel and Brown of New York City. We raise no objection to the retention of this firm as counsel for the prospective buyers.

Since the price to be received for the bonds and preferred stock and the dividend rate on the stock will be determined by competitive bidding, these facts, together with amount

of underwriters' spread, will be filed with this Commission by a subsequent amendment. We shall consider the propriety of the price, the underwriters' spread and the allocation thereof when the necessary details are available. A further order will be entered as to these matters. Jurisdiction is reserved for this purpose.

Fees and Expenses.

Estimates of fees and expenses have been submitted by the applicants and declarants which, aside from the estimated legal fees included, do not appear to be unreasonable. The estimates of legal fees are $15,000 for independent counsel, comprising $8,500 for the bond issue and $6,500 for the preferred stock issue to be paid by the successful bidder or bidders, $25,000 to be incurred by Panhandle Eastern for its own counsel, $28,000 by Columbia Gas, and $7,195 (to date) for Columbia Oil. The independent counsel have submitted a memorandum explaining the basis for computing their fee and in view thereof and of the nature of the circumstances here present we do not find the amount unreasonable. Columbia Gas, Columbia Oil, and Panhandle Eastern have not submitted any breakdowns of their estimates so that we have been unable to pass upon the reasonableness of their estimated legal fees. We will, therefore, reserve jurisdiction to do so later and to make appropriate supplemental orders with respect thereto.

[fol. 15113] Conclusions.

Panhandle Eastern is a non-utility company, and it appears that the issuance and sale here contemplated are solely for the purpose of financing its business. The issue and sale therefore fall within the provisions of Section 6 (b) of the Public Utility Holding Company Act and are exempt from the provisions of Section 6 (a) thereof, subject to such terms and conditions as may be appropriate in the public interest of for the protection of investors or consumers.

Since the company is engaged in the business of the production and transmission of natural gas and hence is

dependent upon a wasting asset, an all common-stock structure would seem to be preferable to that here contemplated. In view of the fact, however, that the ratios of debt and of debt and preferred stock to property are within reasonable limits and of the fact that the sinking fund provisions with respect to both the bonds and the new preferred stock of the company should, if earnings are adequate, result in the retirement of all such senior securities prior to the prospective exhaustion of its gas reserves, we deem it proper not to impose any term or condition with respect thereto.

Mokan has contended that the preferred stock to be issued should be given normal voting rights in the election of directors and in all other corporate matters. In view of the provision made for the election of a majority of the directors by the preferred stock after four quarterly defaults and the requirement of an approval by at least two-thirds of the preferred stock of any corporate action of the types most likely adversely to affect its rights and preferences, we do not think it necessary to impose any further conditions with respect to the voting rights to be conferred upon the stock. We have not ignored, in this connection, the problems raised by the presence in the corporate structure of the outstanding Class B stock. The right of this stock, representing an investment of $1,000,000, to elect two directors would seem prima facie to raise serious issues with respect to the existence of an equitable distribution of voting power in the corporation, insofar as such rights are attached to the stock. It was for these reasons that proceedings under section 11 (b) (2) have been brought with respect to such stock. These proceedings form part of the pending consolidated proceeding and, in view of the connection of this question to the issues herein, hearings will be held with respect thereto and a determination made, with all possible speed.

We conclude that, as has been indicated, the purposes to be effected by the issue and sale are clearly in the public interest and that the proposed transactions, viewed either separately or as an entirety, will not be detrimental to the public interest or the interest of investors and consumers.

We will, therefore, grant the applications and permit the declarations to become effective subject, however, to the conditions previously mentioned, to the terms and conditions prescribed in Rule U-24 and to the following further condition that Panhandle Eastern report to the Commission the results of the competitive bidding, as required by Rule U-50 (c), and comply with such supplemental order as the Commission may enter in view of the facts disclosed thereby.

An appropriate order will issue.

By the Commission, (Chairman Purcell, and Commissioners Healy, Eicher, Pike, and Burke).

(Seal) FRANCIS P. BRASSOR,
Secretary.

January 21, 1942.

[fol. 15114] United States of America

Before the Securities and Exchange Commission

At a regular session of the Securities and Exchange Commission, held at its office in the City of Washington, D. C., on the 21st day of January, A. D., 1942.

In the Matter of

Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation, the Ohio Fuel Gas Company.

Order

File Nos. 59-33, 70-263, 70-371, 70-387, 70-430, 70-431.

(Public Utility Holding Company Act of 1935.)

The above-named parties having filed applications or declarations pursuant to Sections 6, 7, 9, 10, 12 (c) and 12

(f) of the Public Utility Holding Company Act of 1935 and rules and regulations thereunder with respect to the following transactions:

(1) The disposition by Columbia Oil & Gasoline Corporation to Panhandle Eastern Pipe Line Company and the acquisition by the latter of the Class A preferred stock of Panhandle Eastern Pipe Line Company in the par value of $10,000,000;

(2) The sale by Columbia Gas & Electric Corporation to Panhandle Eastern Pipe Line Company and the acquisition by the latter of the stock and debt of Michigan Gas Transmission Corporation and of Indiana Gas Distribution Corporation at the alleged investment cost of those companies to Columbia Gas & Electric Corporation plus undistributed surpluses at the date of the transaction, such prices being, as of September 30, 1941, $10,780,840.59 for Michigan Gas Transmission Corporation, and $153,698.20 for Indiana Gas Distribution Corporation; and the sale by The Ohio Fuel Gas Company, a subsidiary of Columbia Gas & Electric Corporation, to Panhandle Eastern Pipe Line Company and the acquisition by the latter of certain pipe lines and other properties owned by The Ohio Fuel Gas Company in the states of Indiana and Ohio at a price of $439,326.08, which is based on the amount received for the sale of similar property to a non-associated purchaser;

(3) The disposition by Columbia Gas & Electric Corporation to Columbia Oil & Gasoline Corporation and the acquisition by the latter, at principal amount of $11,000,000 face amount of debentures of Columbia Oil & Gasoline Corporation held by Columbia Gas & Electric Corporation;

(4) The issue and sale by Panhandle Eastern Pipe Line Company of First Mortgage 3% Bonds in the principal amount of $10,000,000 and of Cumulative Preferred Stock having a par value of $15,000,000 to obtain the funds [fol. 15115] necessary to carry out the transactions described in paragraphs (1) and (2) above as well as for certain additional construction. The issuer will publicly

invite proposals for the purchase of these securities pursuant to Rule U-50; and

The Commission by its order dated November 14, 1941 having consolidated said applications or declarations with a pending consolidated proceeding and having directed that hearings be held with respect to said applications or declarations prior to the continuance of hearings with respect to the remainder of the said consolidated proceeding; and

The hearing with respect to the said applications or declarations having been held and completed after appropriate notice to all persons interested therein; and arguments and briefs having been waived by all persons interested in the proceedings; and the Commission having considered the record of the proceedings and having entered its findings and opinion herein;

It Is Hereby Ordered that the aforesaid declarations be and hereby are permitted to become effective forthwith and the aforesaid applications be and hereby are granted forthwith subject, however, to the terms and conditions prescribed in Rule U-24 and to the following further terms and conditions:

(1) That there be excluded from the price to be paid by Panhandle Eastern Pipe Line Company to Columbia Gas & Electric Corporation for the stock and debt of Michigan Gas Transmission Corporation the undepreciated portion of the item of $139,424 representing the fee paid by the Michigan Gas Transmission Corporation to The Columbia Gas Construction Company;

(2) That Panhandle Eastern Pipe Line Company report to the Commission the results of the competitive bidding as required by Rule U-50 (c) and comply with such supplemental order as the Commission may enter in view of the facts disclosed thereby.

Jurisdiction is hereby reserved to pass upon the facts disclosed by the report of Panhandle Eastern Pipe Line Company to the Commission with respect to the results

of the competitive bidding as required by Rule U-50 (c) and for the issuance of a supplemental order with respect thereto.

Jurisdiction is further reserved to pass upon the legal fees to be paid by Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation and Panhandle Eastern Pipe Line Company in connection with the above-mentioned transactions, and for the issuance of appropriate supplemental orders with respect thereto.

By the Commission.

(Seal) FRANCIS P. BRASSOR,
Secretary.

[fol. 15134] Morgenthau for 100% Tax on Corporate Gains Over 6%

Washington, Sept. 24—Secretary Morgenthau recommended today that all corporation profits over 6 per cent on invested capital be taxed away by the government for the period of the emergency, asserted that additional restrictions on bank credits might become necessary and opposed fixing by legislation of a price ceiling on wages.

Testifying before the House Banking and Currency Committee in endorsement of the Administration's Price Control Bill, the Secretary of the Treasury held up his concept of profit limitations as "something to shoot at" and gave it merely as a "rule of thumb" representing his own "sincere" conviction.

"In times like these when a corporation earns 6 per cent on its capital it ought to be satisfied," the Secretary said. "In times like these all the rest ought to be taken to pay for these unusual and fantastic figures that represent defense expenditures."

His suggestion for a 6 per cent limitation on profits, was not mentioned in his prepared statement, but was offered in reply to a question from Representative Williams. Later, when Representative Dewey, a former Assistant Secretary of the Treasury, asked for specifications, the Secretary said:

"I was attempting to tell you how I felt, to give you a rule of thumb, but I knew when the tax experts got a hold of it the thing would be much more complicated. In these times, when we are asking young men to serve their country at a dollar a day, and give up what they're giving up, I don't think we're asking business to do any more than its share by giving up everything over 6 per cent.

United States of America,
Securities and Exchange Commission.

I, Francis P. Brassor, Secretary of the Securities and Exchange Commission, Washington, D. C., which Commission was created by the Securities Exchange Act of 1934 (15 U.S.C.A., Sec. 78a et seq), and official custodian of the books and records of said Commission, and all books and records created or established by the Federal Trade Commission, pursuant to the provisions of the Securities Act of 1933 and transferred to this Commission in accordance with Section 210 of the Securities Exchange Act of 1934, do hereby certify that attached is a full, true and complete copy of:

Exhibit "H-6", "Agreement between Columbia Oil & Gasoline Corporation and Columbia Gas & Electric Corporation and Panhandle Eastern Pipe Line Company and Henry T. Bush and C. Ray Phillips as Receivers of Missouri-Kansas Pipe Line Company, dated as of June 1, 1936" and Exhibits A, B and C thereto, as contained in Exhibit "H-9", and Exhibit "I-2" to the registration statement filed with this Commission December 30, 1936 by Panhandle Eastern Pipe Line Company, pursuant to the provisions of the Securities Act of 1933 as amended, under File No. 2-2764, the above registration statement having been withdrawn upon request of the registrant, the Commission having consented to such withdrawal by order dated May 14, 1937.

In witness whereof I have hereunto subscribed my name and caused the seal of the Securities and Exchange Commission to be affixed this 2nd day of December, A. D., 1941, at Washington, D. C.

(Seal) FRANCIS P. BRASSOR,
Secretary.

[fol. 15228] Exhibit 157-A.

Exhibit "H-6".

Agreement

Between

Panhandle Eastern Pipe Line Company

and

Columbia Gas & Electric Corporation

and

Columbia Oil & Gasoline Corporation

Dated January 31, 1936.

[fol. 15229] Agreement made this 31st day of January, 1936, between Panhandle Eastern Pipe Line Company (hereinafter referred to as Eastern), a corporation of the State of Delaware, party of the first part, Columbia Gas & Electric Corporation (hereinafter referred to as Columbia Gas), a corporation of the State of Delaware, party of the second part, and Columbia Oil & Gasoline Corporation (hereinafter referred to as Columbia Oil), a corporation of the State of Delaware, party of the third part.

Eastern has entered into a contract, dated the 31st day of August, 1935, with Detroit City Gas Company, whereby Eastern has contracted to supply the natural gas requirements of Detroit City Gas Company, up to the maximum amount therein specified, for the period set forth in said contract. A copy of said contract (hereinafter referred to as the Detroit Contract) is attached hereto as Exhibit A.

Section 7 of Article II of the Detroit Contract provides that it shall not become effective unless Eastern shall be able to arrange on or before February 1, 1936 for the financing of the construction of a pipe line connecting the eastern terminus of Eastern's existing pipe line at a point in Vermilion County, Indiana, adjacent to the Illinois-Indiana state line with the place of delivery specified in the Detroit Contract, as well as the reinforcement of the

present pipe line of Eastern, since the present pipe line of Eastern is inadequate to deliver the quantity of gas called for by the Detroit Contract. In reliance on the present contract, Eastern has notified Detroit City Gas Company that it has been able to so arrange. The new pipe line extension must be constructed and ready for the delivery of gas not earlier than July 1, 1936, and not later than September 1, 1936. The amount required by Eastern to increase its present pipe line capacity and for working capital is estimated to be approximately $8,600,000, of which it is estimated that approximately $4,000,000 will [fol. 15230] be required in the spring of 1936, and the remainder at some subsequent date or dates.

Indiana Gas Transmission Corporation (hereinafter referred to as Indiana), a Delaware corporation, is a subsidiary of Columbia Oil and owns a natural gas transmission pipe line extending from the eastern terminus of Eastern's existing pipe line across the State of Indiana to a connection with the pipe line of The Ohio Fuel Gas Company at King Measuring Station, near Muncie Indiana.

Michigan Gas Transmission Corporation (hereinafter called Michigan), a Delaware corporation, is a subsidiary of Columbia Gas, organized for the purpose of constructing a pipe line extending from a point on Indiana's pipe line near Zionsville, Indiana, to the place of delivery specified in the Detroit Contract.

Now, Therefore, in consideration of the mutual covenants and agreements herein set forth, the parties hereto, severally and not jointly, covenant and agree as follows:

1. Eastern agrees with the parties hereto as follows:

(a) That it will enter into a contract with Indiana for the delivery of gas through Indiana's pipe line to Michigan and will enter into a contract with Michigan for the delivery of gas by Michigan to Detroit City Gas Company, such contracts to contain such terms and provisions as shall insure the delivery to Detroit City Gas Company of natural gas in the quantities and upon the terms and conditions specified in the Detroit Contract; or, in case Michigan shall acquire said line of Indiana ex-

tending from the Illinois-Indiana state line to Zionsville, will enter into a contract with Michigan providing for the delivery of said gas by Eastern to Michigan at the Illinois-Indiana state line, without the intervention of Indiana, the terms of such single contract to have sub-
[fol. 15231] stantially the same result to Eastern as the terms of the two contracts above referred to.
